MEMORADUM FOR: Distribution List

Subject: Global Force Management Initial Capabilities Document

The Joint Requirements Oversight Council (JROC) approves the Global Force Management (GFM) Initial Capabilities Document (ICD) with a Joint Potential Designator of "JROC Interest." The JROC recognizes the dynamic nature of GFM and an enduring need for continuous process improvement. The JROC designates U.S. Joint Forces Command as the lead component.

JAMES E. CARTWRIGHT
General, United States Marine Corps
Vice Chairman
of the Joint Chiefs of Staff

Distribution:

- Vice Chief of Staff of the Army
- Vice Chief of Naval Operations
- Vice Chief of Staff of the Air Force
- Assistant Commandant of the Marine Corps
- Commander, US Africa Command
- Commander, US Central Command
- Commander, US European Command
- Commander, US Joint Forces Command
- Commander, US Northern Command
- Commander, US Pacific Command
- Commander, US Southern Command
- Commander, US Special Operations Command
- Commander, US Strategic Command
- Commander, US Transportation Command
- Assistant Secretary of Defense for Networks and Information Integration
- Director, Cost Assessment and Program Evaluation
- Director, Missile Defense Agency

EXECUTIVE SUMMARY

The purpose of the *Global Force Management (GFM) Initial Capabilities Document (ICD)* is to articulate the capability gaps and potential solutions for the Department of Defense's (DOD) GFM enterprise processes, tools and practices. The GFM Quick-Turn (QT) Capabilities-Based Assessment (CBA) generated the capabilities, tasks, attributes, and standards (C/T/A/S) to create the context and analytic framework for an analysis of GFM and identified the associated capability gaps. United States Joint Forces Command (USJFCOM) executed the GFM QT CBA in coordination with the Combatant Commands, Services, Agencies (CSAs), and Joint Staff. The GFM QT CBA focused on identifying capability gaps preventing full realization of GFM and Adaptive Planning and Execution (APEX) goals (e.g. Integrate Adaptive Planning (AP) with GFMⁱ) and the solutions necessary to remediate the gaps hindering the Department of Defense (DOD) from meeting the *Global Force Management Implementation Guidance (GFMIG) 2010-2011*. These include:

- Transforming three stove-piped processes [assignment, apportionment, allocation] into a predictive, streamlined, and integrated process supported by net-centric tools that integrate risk managementⁱⁱ
- Aligning the three processes under GFM as an interim step
- Enabling the allocation process to monitor force availability over time, identify risks to execute Combatant Commander (CCDR) missions, forecast sourcing challenges to execute contingencies, and project Reserve Component (RC) unit mobilization/availability

Throughout the assessment, the mutually supporting interrelated APEX and GFM processes were viewed through a GFM lens. The CBA's recommended improvements and solutions do not disrupt the operations of GFM, APEX or other related planning processes. The assessment clearly pointed out that technology, by itself, is not a solution.

The Secretary of Defense (SecDef) created GFM in 2005 to transform the reactive force management process into a near real-time, proactive process. The SecDef envisioned the integration of assignment, apportionment, and allocation would allow for more proactive, risk-informed force management decisions. The alignment of forces through GFM requires relationships among the assignment, allocation, and apportionment processes (alignment of forces) to transition over time to a single, integrated, capabilities-based process that supports the *National Defense Strategy (NDS)*.

Since the creation of GFM, disparate efforts to implement GFM have led to significant improvements. However, the efforts have primarily focused on optimizing the sub-elements of GFM, not optimization of the enterprise. Assignment, allocation, and apportionment are not integrated into a predictive, streamlined process, and there is a lack of net-centric supporting infrastructure.

The military problem this effort attempts to solve is:

The GFM assignment, apportionment, and allocation processes, tools, and data are neither synchronized across all stakeholders nor integrated with related processes, thereby reducing the ability to efficiently and effectively align the force structure to respond to the complex and dynamic global environment.

The GFM QT CBA is an analytic effort derived from the *Force Management Joint Functional Concept (FM JFC)*, *Unified Command Plan (UCP)*, *Command and Control (C2) Joint Capabilities Document (JCD)*, *GFMIG* and *AP Roadmaps I and II*. The capabilities/tasks/attributes/standards (C/T/A/S) of the GFM QT CBA were derived from these documents and other foundational GFM documents, policies, and orders (e.g., *Joint Strategic Capabilities Plan [JSCP]*, *GFMIG*, *Forces for Unified Commands*

UNCLASSIFIED

UNCLASSIFIED

Memorandum, *Joint Staff Business Rules*, annual *Chairman of the Joint Chiefs of Staff [CJCS] GFM Allocation Plan [GFMALP]*, annual *CJCS Rotational Forces Request Planning Orders [PLANORD]*, and annual *CJCS Joint Force Provider (JFP) PLANORDs*. The GFM QT CBA also leveraged the work conducted by the Force Management Integration Project (FMIP) to provide a solid analytic foundation. The vignettes and scenarios from the Capstone Concept for Joint Operations (CCJO) Experiment created the operational context for detailed gap and redundancy analysis of the GFM C/T/A/S.

The gap and redundancy analysis utilized a combination of document review, subject matter expert (SME) interviews and insight, process modeling, and statistical analysis to develop a list of 12 prioritized gap areas:

- There is a lack of procedures, technology, and data interoperability between GFM and related processes.
- CCDRs do not have an effective means to predict the availability of forces for plans.
- Joint and Service GFM data (e.g., readiness, force structure, force alignment, and data context) are neither globally visible nor accessible.
- There are insufficient means to update and maintain the current tool suites.
- GFM is not fully incorporated into DOD policy, doctrine, and procedures.
- A common understanding of the capabilities and limitations of the contingency sourcing process does not exist across all GFM stakeholders.
- GFM risk assessments do not fully analyze nor communicate the risks of sourcing decisions.
- The capacity of the GFM enterprise is limited by deficiencies in manning and supporting tools.
- Allocation is not aligned with the budgeting process.
- Force providers do not have sufficient lead-time to train ad-hoc/in-lieu-of (ILO) forces for near-term force requirements.
- GFM feedback to the force development/force generation decision process is late and incomplete.
- The DOD lacks institutionalized training in GFM process and procedures.

Additional insight gained from the analysis and prioritization of the gaps led to the establishment of four Doctrine, Organization, Training, Materiel, Leadership and Education, Personnel, Facilities, and Policy (DOTMLPF-P) integrated solution packages: GFM Vision, GFM Doctrine and Policy, GFM Processes/Procedures, and GFM Supporting Technology. The recommendations contained in each of the four packages span the full spectrum of DOTMLPF-P except for facilities.

The implementation of these solution packages will create an integrated GFM/APEX enterprise providing comprehensive insights into the global availability of United States (US) military forces and capabilities while providing senior decision makers an improved process to quickly and accurately assess the impact and risk of proposed changes in force/capability alignment.

The result will be a timely alignment of forces and capabilities necessary to execute CCDRs' current and future missions (including theater security cooperation) and SecDef decisions informed by the risks associated with allocation decisions and improved planning and execution, thereby realizing the APEX vision.

1 Concept of Operations Summary

1.1 General

In 2003, the Department of Defense (DOD) was preparing for the second rotation of forces to deploy to Iraq in support of Operation Iraqi Freedom (OIF). The primary methodologies for managing the force pool at that time examined the worldwide disposition of forces and determined the appropriate force rotations. However, the failure to properly integrate force management processes left the Secretary of Defense (SecDef) without a comprehensive means to determine the impact and assess the level of risk associated with his decisions.

The SecDef created Global Force Management (GFM) to transform the reactive force management process into a near real-time, proactive process¹. Since then, GFM guidance matured into the *Global Force Management Implementation Guidance (GFMIG) FY2010-2011*. The SecDef envisioned the integration of assignment, apportionment, and allocation, the primary GFM processes, would allow for more proactive, risk-informed force management decisions. The alignment of forces through GFM requires relationships among the assignment, allocation, and apportionment processes to transition, over time, to a single, integrated, capabilities-based process to support the *National Defense Strategy (NDS)*. *GFMIG* defines the three primary processes GFM draws together².

- **Assignment** – Title 10, United States Code (USC), Sections 161, 162, and 167 outline force assignment guidance and requirements. The President, through the *Unified Command Plan 2008 (UCP)*, instructs the Secretary to document his direction for assigning forces in the *Forces for Unified Commands Memorandum*. Pursuant to Title 10, USC, Section 162, the Secretaries of the Military Departments shall assign forces under their jurisdiction to unified and specified Combatant Commands to perform missions assigned to those commands. Such assignments shall be made as directed by the SecDef, including direction as to the command to which forces are to be assigned.
- **Apportionment** – Pursuant to Title 10, USC, Section 153, “the (Chairman of the Joint Chiefs of Staff [CJCS]) shall be responsible for preparing strategic plans, including plans which conform to resource levels projected by the SecDef to be available for the period of time for which the plans are to be effective.” Pursuant to the *Joint Strategic Capabilities Plan (JSCP)*, “apportioned forces are types of forces provided to Combatant Commanders (CCDR) as a starting point for planning purposes only. Forces apportioned for planning purposes may not necessarily be those allocated for execution.” The CJCS’s apportionment of forces to CCDRs, outlined in the apportionment tables of the *Global Force Management Implementation Guidance 2008-2009*, assumed reasonably available forces and is based on priorities specified in the Secretary’s *Guidance for Employment of the Force (GEF)*.
- **Allocation** – Pursuant to Title 10, USC, Section 162, “(a) force assigned to a (CCDR) ...may be transferred from the command to which it is assigned only by authority of the SecDef; and under procedures prescribed by the SecDef and approved by the President.” Under this authority, the SecDef allocates forces between CCDRs. When transferring forces, the SecDef will specify the command relationship the gaining commander will exercise (and the losing commander will relinquish).

The integration of GFM facilitates alignment of operational forces against known apportionment and allocation requirements in advance of planning and deployment preparation timelines. The term **alignment**, as used throughout this document, includes scheduling force deployments, training cycles, and redeployment/reset in accordance with current policies (such as dwell time) through the integration of

UNCLASSIFIED

UNCLASSIFIED

assignment, allocation, and apportionment processes. **Stakeholder**, as used in this document, refers to the Joint Staff and the Office of the Secretary of Defense (OSD), the Services (including Service components), joint force providers (JFP) (including Service components), Joint Functional Managers (JFM), and CCDRs (including subordinate commands, Service components and joint task forces). The purpose of the *GFM Initial Capabilities Document (ICD)* is to articulate the capability gaps and potential solutions for the DOD's GFM enterprise processes, tools and practices across all stakeholders.

1.2 Conceptual Foundation for Global Force Management (GFM)

The *Force Management Joint Functional Concept (FM JFC)*, *Command and Control (C2) Joint Capabilities Document (JCD)*, *GFMIG*, *Adaptive Planning (AP) Roadmaps I and II* concepts, and the *UCP* guidance are the authoritative concepts for defining GFM. The *FM JFC* identifies the principles, capabilities, and attributes required by force management to integrate human and technical assets from across the Joint Force to make the right capabilities available at the right time and place. The *UCP* establishes the Combatant Commands, identifies geographic areas of responsibility, assigns primary tasks, defines authority of the commanders, establishes command relationships, and gives guidance on the exercise of combatant command. The *AP Roadmaps I and II* describe Adaptive Planning and Execution (APEX) in the 21st century and outline the way ahead for implementing APEX. Implementing APEX includes integrating GFM and APEX.

Going beyond the concept document, the baseline documents establishing the policy and procedures driving the actual execution of GFM are: *UCP*, *JSCP*, *GFMIG*, *GEF*, *Joint Staff Business Rules and SecDef Operations Book (SDOB) Process Message*, annual *CJCS Rotational Forces Request Planning Orders (PLANORD)*, annual *CJCS JFP PLANORDs*, *Forces for Unified Commands Memorandum*, annual *CJCS GFM Allocation Plan (GFMAP)*, and annual *Apportionment Tables*.

1.3 Operational Outcomes, Effects, and Complements to an Integrated Joint Force

GFM provides comprehensive insights into the global availability of United States (US) military forces and capabilities while providing senior decision makers a process to quickly and accurately assess the impact and potential risk of proposed changes in force/capability alignment. The result is timely alignment of forces and capabilities necessary to execute CCDRs' missions (to include theater security cooperation tasks), timely alignment of forces against future requirements, and informed SecDef decisions on the risk associated with allocation decisions. GFM operational outcomes and effects are³:

- Account for forces and capabilities committed to ongoing operations and constantly changing unit availability.
- Identify the most appropriate and responsive force or capability to best meet CCDR requirements.
- Identify risk for the SecDef associated with sourcing recommendations.
- Improve the DOD's ability to win multiple overlapping conflicts.
- Improve the DOD's responsiveness to unforeseen contingencies.
- Provide predictability to the Services for rotational force requirements.
- Identify forces and capabilities that are unsourced or hard-to-source (UHTS).

2 Joint Capability Area (JCA)

2.1 Applicable Joint Capability Areas (JCA)

The taxonomy of the current version of the Joint Capability Areas (JCA) establishes GFM as a Tier III JCA under the Force Management Tier II and Force Support Tier I JCAs. Figure 1 depicts the most relevant mapping of GFM tasks to JCAs. Appendix E, Section 2 contains a complete mapping.

Figure 1 GFM Task to JCA Correlation Analysis

The output of a dependency analysis of GFM tasks and Tier III/IV JCAs revealed the preponderance of GFM operational impact and inter-dependency came from the C2 JCA. While there was broad, cross-portfolio impact (i.e., Force Support, Logistics, Net-Centric, Building Partnerships, Corporate Management and Support), the JCA correlation analysis revealed GFM to be a fundamental element of the capabilities within the C2 JCA with the preponderance of cross-portfolio impact in the Force Support JCA. This output also led the GFM capabilities-based assessment (CBA) study team to interpret the dependency of GFM tasks against the task list in the *C2 JCD*. The results of this analysis identified many GFM tasks that were both intrinsic elements and key enablers of a large number of *C2 JCD* tasks. The combination of the JCA correlation analysis and *C2 JCD* task analysis resulted in a clear association of the GFM CBA with the C2 Functional Capabilities Board (FCB) and a recommendation from the GFM CBA study team for the C2 FCB to sponsor the *GFM ICD*.

2.2 Scenario and Timeframe

In accordance with the *FM JFC* and *C2 JCD*, GFM processes occur continuously, across the full range of military operations (ROMO) US forces are performing, whether major combat operations, stability operations, or irregular warfare. Regardless of the planning or operational situation, the SecDef mandates the specification of assigned forces as well as the allocation of forces through GFM. The CJCS apportions forces to Combatant Commands based upon SecDef's GEF. The resulting fundamental nature of GFM to DOD operations required the GFM CBA study team to take a broad view during scenario selection.

The study team conducted an initial assessment of the Defense Planning Scenarios (DPS) and Multi-Service Force Deployment (MSFD) data. The GFM CBA study team also evaluated the Capstone Concept for Joint Operations (CCJO) Experiment during the scenario selection process. The DPS and the future looking *Joint Operational Environment (JOE) 2008* provided the basis for the CCJO Experiment's scenarios and vignettes. The CCJO Experiment scenarios and vignettes provided participants (including the Combatant Commands, Services, Agencies (CSAs), Office of the SecDef, and Joint Staff) with operational context and mission focus/drivers. In light of the currency and level of involvement in the

UNCLASSIFIED

UNCLASSIFIED

CCJO Experiment from across the DOD, the study team decided to use the CCJO Experiment scenarios and vignettes as the operational context for the GFM CBA.

The CCJO Experiment's scenarios and vignettes, focused on 2020, also provided an analytically useful timeframe. While the GFM CBA is driving towards impact and change in the 2010 to 2015 timeframe, any results and solutions from the GFM CBA must be enduring and relevant to the 2020 focus of the CCJO Experiment. Utilizing the CCJO Experiment's scenarios and vignettes allowed the GFM CBA study team to frame GFM capabilities and tasks in the long-term while still identifying near-term impacts and solutions. Appendix F contains a more detailed description of each of the vignettes and their specific conditions.

3 Required Capability

3.1 Military Problem

Since the creation of GFM, disparate efforts to implement GFM have led to significant improvements. However, the efforts have primarily focused on optimizing the sub-elements of GFM, not optimization of the enterprise. Assignment, allocation, and apportionment are not synchronized into a predictive, streamlined process, and there is a lack of net-centric supporting infrastructure. GFM is also not integrated with other related processes. The overarching military problem for GFM is:

The GFM assignment, apportionment, and allocation processes, tools and data are neither synchronized across stakeholders nor integrated with related processes, thereby reducing the ability to efficiently and effectively align the force structure to respond to the complex and dynamic global environment.

3.2 Study Design/Analysis Process

Two primary factors guided the design of the GFM CBA:

- The Vice Chairman of the Joint Chiefs of Staff (VCJCS) directed the GFM CBA to integrate ongoing work in GFM and APEX in order to move the GFM enterprise forward, specifically "viewing AP through GFM."
- The Force Management Integration Project (FMIP) provided a large amount of analysis previously conducted on the GFM enterprise for use as part of the GFM CBA.

Initial analysis of the impact of these two foundational factors, combined with the guidance in the *CBA User's Guide, Version 3*, led the GFM CBA study team to execute a Quick-Turn (QT) CBA. The study team focused on three key perspectives to analyze the GFM enterprise:

- Definition of force pool – justifying the acquisition and procurement of the force infrastructure.
- Force demand – the total requirement being levied on the force pool.
- Alignment of forces – assignment, apportionment, and allocation of the force pool to meet the force demand.

The GFM CBA study team analyzed processes and procedures enabling and enabled by GFM (e.g., Joint Operation Planning and Execution System [JOPES]⁴, APEX, Readiness, Deployment, Force Generation). As an example, JOPES is the current way the DOD plans and executes joint military operations. Force planning is the specified responsibility of the CCDR, supported by component commanders in coordination with GFM providers. The GFM CBA would not be accurate without the context of the JOPES/GFM interaction and dependency.

UNCLASSIFIED

The GFM CBA study team began by defining the scope and objectives of the study and capturing them in an Operational View-1 (OV-1), contained in Appendix A. An analysis of the DPS, CCJO Experiment, and key GFM guiding documents (captured in Section 1.2) resulted in the identification of four GFM capabilities, 19 GFM tasks, and six attributes with their associated baseline standards. The GFM stakeholders assisted in developing and vetting these elements.

The GFM CBA study team analyzed the relationship between the capabilities and the Universal Joint Task List (UJTL) to correctly highlight why the required capabilities are essential to the joint force commander to achieve military objectives. Binding these UJTL tasks together via the CCJO scenarios and vignettes provided a means for conducting gap, overlap, and redundancy analyses of the four capabilities. The steps highlighted in Figure 2 illustrate the details of GFM CBA's capability analysis process. The outputs of the capability analysis phase are the capabilities, tasks, attributes, and standards for GFM.

420

421 3.3 Global Force Management (GFM) Capabilities

The definition of a capability is the ability to achieve a desired effect under specified standards and conditions through combinations of means and ways across the doctrine, organization, training, materiel, leadership and education, personnel, and facilities (DOTMLPF) to perform a set of tasks to execute a specified course of action.⁵ Capabilities are comprised of a set of related tasks. GFM requires the development of a number of capabilities to a specific level of performance to transform reactive force management process into a near real-time, proactive process. This section identifies four capabilities needed to implement the central and supporting ideas of GFM, as well as defining the associated tasks, conditions, and standards.

430 An attribute is a quantitative or qualitative characteristic of an element or its actions.⁶ Attributes must be
431 measurable and testable while describing an aspect of systems or capabilities. Specifically, an attribute is
432 a characteristic of the joint force. Agile organizations possess a number of important attributes critical to
433 meeting the challenges of the future operating environment. The attributes identified for GFM enable
434 performance measurement of each GFM capability. The GFM CBA study team used the *GFMIG*
435 definition of GFM and the capabilities and tasks identified in the *FM JFC* as the starting points for

5

UNCLASSIFIED

determining the GFM CBA capabilities. Assessment of the GFM aspects of the scenarios and vignettes resulted in the identification of four capabilities for GFM.

The GFM capabilities provide the ability to perform four specific GFM functions collaboratively in real time or near-real time (as appropriate) across components and echelons. Maximum realization of these capabilities is contingent upon the fundamental ability to share information and collaborate among command nodes by 2015. The GFM CBA study team derived the tasks from a literature review of research and source documents. Section 1.2 and Appendix B (References) list those documents and Section 3.2 lists the tasks derived from the literature review. An analysis of the approved attributes in the *C2 JCD* and *FM JFC* resulted in the six GFM CBA attributes. An evaluation of GFM tasks and UJTL against the CCJO scenarios/vignettes guided the development of the baseline standards for the six GFM attributes. Multiple standards are associated with each attribute because the attributes apply to various aspects of the GFM tasks, as each task may be performed at more than one echelon of the stakeholder community. The scoring of the attributes, in terms of their applicability to each task, took place using subject matter expert (SME) input and validation, with the assignments ranging from two to six of the attributes per task.

Capability 1 – Shape and Align the Force Pool

The ability to manage the current DOD force pool and to provide feedback to the force development decision processes. GFM shapes the force by providing feedback to help determine the future size and type of forces in the DOD inventory and influence the content of the *Guidance for Development of the Force (GDF)* through an analysis of requirements levied against the current force pool. An analysis of the risks associated with sourcing the CCDRs' operational needs, derived from the annual persistent shortfall analysis, is also critical to provide feedback content. GFM aligns the force pool by managing force deployments, training cycles, and redeployment/reset through the assignment, allocation, and apportionment processes in accordance with current joint and Service policies (e.g., boots on ground [BOG]: Dwell ratio, Service redlines).

Capability 2 – Provide Visibility of the Global Availability and Operational Readiness of the Force Pool

The ability to provide a common understanding of and context associated with the availability and operational readiness of the force pool. This includes considering a myriad of factors, such as joint and Service policies (e.g., BOG: Dwell ratio, Service redlines), and influencing the availability and readiness of the force pool. This common understanding of force availability and readiness is an enabler for both supported and supporting commands to collaboratively develop and execute relevant plans.

Capability 3 – Globally Source and Deploy Joint Forces

The ability of force providers to recommend feasible joint sourcing solutions for prioritized CCDR operational tasks to the SecDef. The analysis process leading to the recommended sourcing solutions contains a quantification of the available capacity of the force pool and an articulation of the risks defined by each stakeholder. The JFP, or JFM, develops the recommended sourcing solutions through collaboration with assigned Service components, Services, and other CCDRs and forwards those solutions to the SecDef via the Joint Staff for decision. After implementation of the SecDef's decision to support a CCDR's operational task, the tasked force provider/Service prepares the individual or force for deployment (train, organize, and equip). A key element of this capability is the ability of force providers to adapt the DOD force structure in creative ways to meet the capability needs of the warfighter, deploy the selected force(s) or individual(s), and sustain deployed forces.

Capability 4 – Assess the Impact and Risk of Proposed Changes to the Force Pool

UNCLASSIFIED

UNCLASSIFIED

The ability of decision makers to implement effective force management through sufficient and accurate knowledge of the risks and trade-offs of proposed changes to the force pool. These risks include meeting strategic and operational objectives while balancing the Services' capacity to provide sufficient forces to meet the CCDR's current operational requirements against potential future operational needs. Decision makers must be able to rapidly discern, measure, and present complete and accurate risk assessments (to include indentifying an acceptable risk threshold), addressing current and potential future risks. Understanding the opportunity costs and providing the best available options for fulfilling the need for specific capabilities is the cornerstone of the assignment, allocation, and apportionment decision processes.

3.4 Global Force Management (GFM) Tasks

Within the GFM enterprise, stakeholders conduct a core set of baseline activities when performing the alignment processes. The core set of activities are not necessarily the same task, but interconnected tasks executed in serial and/or parallel. Each GFM stakeholder, at each echelon, performs these tasks with a different focus (ends) and with different degrees of granularity (means). The following is the consolidated list of the GFM tasks.

1. Develop Force Lists for Concept Courses of Action (COAs)
2. Select COA and Corresponding Force List
3. Develop Individual Force Requirements
4. Review/Validate Requirements
5. Determine Sourcing Guidance
6. Estimate Available Forces/Capabilities
7. Develop Sourcing Options
8. Generate Global Sourcing Solution
9. Determine Impacts and Risks
10. Review Sourcing Solution
11. Approve Sourcing Solution
12. Direct Execution of Sourcing Solution
13. Provide Feedback into Force Development Decision Process
14. Form and/or Resource Unit (Train, Organize, Equip)
15. Monitor and Report Readiness
16. Balance and Regulate Force Flow Based on Movement and Joint Reception, Staging, Onward Movement, and Integration (JRSOI) Capacity
17. Track and Report Force Deployments and Redeployments
18. Assign Tasks/Missions to Units
19. Sustain Forces

Appendix D, Section 1 – GFM Tasks, contains the full list of GFM tasks and their definitions. Appendix D, Section 2 – GFM Task, Echelon, Alignment Matrix, contains the mapping of tasks to stakeholders.

3.5 Global Force Management (GFM) Task Attributes

The GFM CBA study team derived the six GFM attributes from an analysis of the attributes in the *C2 JCD* and the *FM JFC* taken in context of the scenarios and vignettes. An assessment of the relevant, Senior Warfighter Forum (SWarF)-prioritized capability attributes identified by the Combatant Commands, as contained in *Manual for the Operation of the Joint Capabilities Integration and Development System (JCIDS)*, 31 July 2009, provided additional context. The six GFM attributes resulting from the attribute analysis are:

UNCLASSIFIED

UNCLASSIFIED

- Accessibility
- Agility
- Foresight
- Quality
- Security
- Simplicity

Appendix D, Section 4 – GFM Attributes and Section 5 – GFM Baseline Standards contain further discussion of GFM attributes, including their definitions and associated baseline standards.

4 Capability Gaps and Overlaps or Redundancies

4.1 Gap, Overlaps, and Redundancies Overview

The gaps identified during the GFM CBA resulted from a combination of lack of proficiency in existing capability (cannot accomplish the mission to the level expected) and lack of sufficient capability (do not have enough of an effective capability). As normally found during a CBA, there are operational redundancies and overlaps within the gap areas. Capability redundancy is not necessarily negative. Redundancy in capabilities is often the key element providing robust operational capability for the warfighter. In contrast to redundancies, capability overlaps require attention, as they do not provide additional operational capability, but impose unnecessary complication and/or inefficiencies across the GFM enterprise.

4.2 Gap Analysis Methodology

Building upon the output of the capability analysis, the GFM CBA study team identified capability gaps within the GFM mission area utilizing quantitative and qualitative methods of analysis supported by SME insight. The steps highlighted in Figure 3 identify the details of the gap analysis methodology.

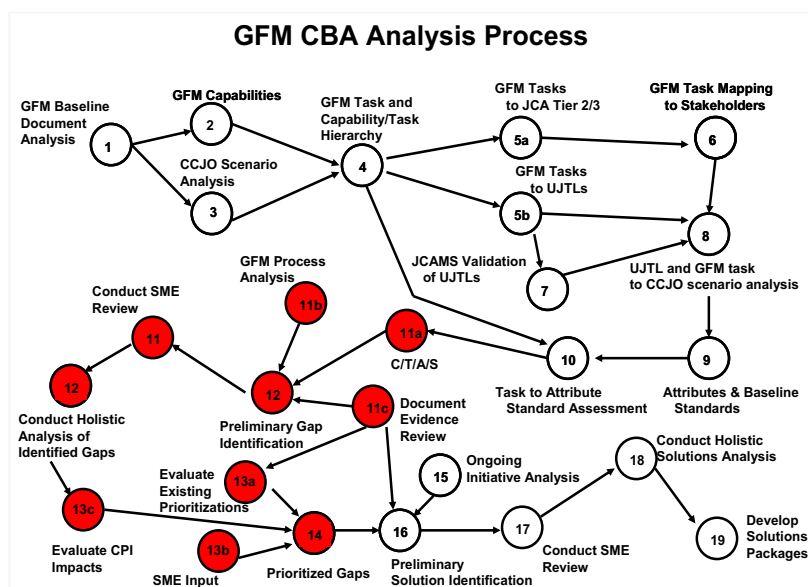

Figure 3 GFM CBA Gap Analysis Process

Significant analysis of the UJTL and JCAs provided the framework to determine the capability gaps. Subsequent wargaming vetted the gaps.

The UJTL mapping was cross-correlated with the JCA Management System (JCAMS) website. The creation of a task link took place if a Universal Joint Task (UJT) and a JCA mapped to the task. Analysis

UNCLASSIFIED

UNCLASSIFIED

of the scope and complexity of the GFM enterprise results in the identification of multiple applicable JCAs outside the Tier I JCA Force Support. Those Tier I JCAs applicable to GFM include: C2, Logistics, Net-Centric, Building Partnerships and Corporate Management and Support.

The analysis of the GFM enterprise tasks to the Tier II JCAs provided the framework for assessing gaps in GFM. The GFM CBA study team mapped these gaps to one or more GFM tasks. The result was a table linking the GFM capabilities, tasks, attributes, and metrics to capability gaps. The roll-up of the task-attribute scores resulted in a prioritized list of capability gaps. The specific components of the gap analysis are contained in the following appendices:

- Develop Attribute Baseline Standards (Appendix D Section 4)
- Align Baseline Standards to the GFM Tasks (Appendix D Sections 5 and 6)
- Analyze GFM Tasks against JCA Tier II Capabilities and develop a mapping to the UJTL through the lens of the stakeholders (Appendix E)
- Use the UJTL to define warfighter-relevant measures to assess the vignettes (Appendix F)
- Use the vignettes to generate the analytical rigor needed to highlight the capability gaps associated with the four GFM CBA capabilities (Appendix F)

4.3 Gap Analysis Results

4.3.1 Scoring

In order to assess relative values for each of the tasks, an average of the attribute/standards metrics for each of the task/attributes produced an overall score for each attribute. An average of the attribute values for the attributes of a given task resulted in the score for each of the tasks. Table 1 displays the format utilized to determine the average. Each column (numbered one through seven) corresponds to the standards associated with the attributes (as per Appendix D, Section 6). In the sample below, scores for each of the four most applicable attributes for “Select COA” (accessibility, foresight, quality, and security) were averaged (attribute average) and then an average of the four resulted in the overall task score of 0.4558 (task average). Similarly, “Determine Sourcing Guidance” has a resultant score of 0.57. The complete table is in Appendix D, Section 8 contains a more detailed explanation of the methodology.

Table 1 Sample C/T/A/S Metrics, and Task Averages

Capability	Task	Attribute	1	2	3	4	5	6	7	Attribute Average	Task Average
Shape and Align the Force Pool	Select COA and Corresponding Force List	Accessibility	0.7	0.0						0.3500	0.4558
		Foresight	0.0	0.7	0.7	0.7	0.0			0.4200	
		Quality	0.7	0.0	0.0					0.2333	
		Security	0.7	1.0	0.7	0.7	1.0			0.8200	
	Determine Sourcing Guidance	Agility	0.0	0.7						0.3500	0.5700
		Foresight	0.7	0.7	0.0	0.7	0.7			0.5600	
		Security	0.7	1.0	0.7					0.8000	

4.3.2 Gap Prioritization

The scoring method for prioritizing the capability gaps, and associated tasks, was to calculate a straight average of the task scores for each capability gap (CG). Table 2 is a sample of this scoring.

Table 2 Sample Capability Gap Scoring

Task	Capability Gap #	Task Score	Capability Gap Score
Develop Force Lists for Concept COAs	CG-1	0.5550	0.5625

UNCLASSIFIED

UNCLASSIFIED

Determine Sourcing Guidance	CG-1	0.5700	
Develop Force Lists for Concept COAs	CG-2	0.5550	0.6850
Monitor and Report Readiness	CG-2	0.7000	
Sustain Forces	CG-2	0.8000	
Review/Validate Requirements	CG-2	0.5542	
Select COA and Corresponding Force List	CG-3	0.4558	0.5495

The gaps were then ordered, highest to lowest (the larger the score the smaller the gap), to establish a prioritization for the gaps. The following gap areas reflect a grouping analysis performed on the detailed information captured during the gap analysis contained in Appendix D, Section 7: Task – Attribute – Standard Assessment. The grouping analysis generated 12 gap areas designed to encapsulate the details and examples of the gaps identified during the gap analysis.

Table 3 shows the capability gap scores and their relative rankings. Capability Gap 4 (CG-4) is the number one gap as it has the lowest combined score.

Table 3 Capability Gap Prioritization

Priority	Capability Gap #	Capability Gap Description	Average of Gap Score
1	CG-4	There is a lack of process, technology, and data interoperability between GFM and related processes.	0.4573
2	CG-10	CCDRs do not have an effective means to predict the availability of forces for plans.	0.4869
3	CG-6	Joint and Service GFM data (e.g., readiness, force structure, force alignment, and data context) are neither globally visible nor accessible.	0.5398
4	CG-3	There are insufficient means to update and maintain the current tool suites.	0.5495
5	CG-1	GFM is not fully incorporated into DOD policy, doctrine and procedures.	0.5625
6	CG-11	A common understanding of the capabilities and limitations of contingency sourcing process does not exist across all GFM stakeholders.	0.5765
7	CG-5	GFM risk assessments neither fully analyze nor communicate the risks of sourcing decisions.	0.5890
8	CG-9	The capacity of the GFM enterprise is limited by deficiencies in manning and supporting tools.	0.6031
9	CG-7	Allocation is not aligned with the budgeting process.	0.6140
10	CG-12	Force providers do not have sufficient lead-time to train ad-hoc/ILO forces for near-term force requirements.	0.6356
11	CG-8	GFM feedback to the force development/force generation decision process is late and incomplete.	0.6357
12	CG-2	The DOD lacks institutionalized training in GFM process and procedures.	0.6523

4.3.3 Capability gaps

- **(CG-1) GFM is not fully incorporated into DOD policy, doctrine, and procedures.** Other policy documentation covering planning and GFM are separate and do not specify an integrated process that incorporates both planning and GFM. The GFMIG specifies the GFM policies clearly. While GFM processes and procedures are specified in the GFM core documents (i.e., *GFMIG* (updated bi-annually), annual *CJCS Rotational Forces Request PLANORD*, annual *CJCS JFP PLANORD*, annual *CJCS GFMAP*, and *Joint Staff Global Force Management Business Rules*), core documents in individual message orders do not provide the persistent, widespread knowledge and authority provided by DOD strategic guidance and policy such as *CJCS Instructions* and/or *CJCS Manuals* (*CJCSIs/CJCSMs*). In some instances, the various policy documents provide contradictory guidance. For example, the *JOPES* manual states force planning is the responsibility of the supported CCDR while the *GFMIG* states the *JFP* is responsible for recommending sourcing solutions to CCDR force requests. Disconnects like this example cause

UNCLASSIFIED

UNCLASSIFIED

confusion among the Joint Planning and Execution Community (JPEC). Doctrine has not incorporated GFMIG policy guidance. Additionally, the GFM community must leverage the updated policy and ensure appropriate engagement occurs during the review and update of Joint doctrine and CJCSIs/CJCSMs.

- **(CG-2) The DOD lacks institutionalized training in GFM process and procedures.** The lack of formal, institutionalized training in GFM processes and procedures degrades the GFM community's efforts to increase capacity and be more responsive to the Combatant Command planning community. This gap stems from an absence of integrated policy issuances, doctrine, and procedures suitable for the development of standardized programs of instruction. Each GFM stakeholder must train its own personnel, resulting in stovepiped knowledge and processes. This situation creates multiple instances of "unique" GFM training leading to limited trust between stakeholders within the GFM enterprise. Additionally, multiple, different types of training also creates limited trust between GFM stakeholders and other organizations consuming GFM data.
- **(CG-3) There are insufficient means to update and maintain the current tool suites.** Current requirements and information technology (IT) acquisition processes do not provide adequate means to rapidly develop, deliver, and maintain solutions for GFM tools in a timely fashion. Systems supporting GFM must respond to the ever-changing operational environment and require development and maintenance that is equally responsive. The DOD's institutional development and maintenance cycles must be responsive to changes in operational requirements as well as DOD leadership, direction, and policy to maintain GFM relevant to meet future SecDef and President of the US (POTUS) guidance. Appendix G, Section 3 contains a list of tools used by the GFM stakeholders.
- **(CG-4) There is a lack of procedures, technology, and data interoperability between GFM and related processes.** Each of the processes interacting with GFM has self-organized over time, each with specific rules, tools, and processes that are not integrated. As a supporting process to JOPES, GFM procedures, data, and tool integration must deliver seamless, secure information exchange for warfighter planning and execution processes. Likewise, plans developed using JOPES need to support the necessary processes in GFM in order to manage the forces. A root cause of this lack of interoperability is the lack of a commonly agreed upon GFM data requirements on the part of the JPEC and a hesitancy to make existing data accessible on the part of joint and Service data producers. The GFM Data Initiative (GFM-DI) is pursuing a globally visible force structure referenced by the JPEC, but the interface tools to show force availability and alignment over time to aid collaboration between JPEC and GFM stakeholders have not been developed yet. Along with the data, processes and procedures within the GFM community and JPEC are not interoperable. As an example, the force providing community requires information not currently specified in JOPES (system or process) to source a plan, creating challenges when transitioning from planning to execution. Although the Force Tracking Number (FTN) and Joint Reception Center (JRC) fields have been added to JOPES and the JOPES Reporting Structure (JOPESREP), the other data fields specified in the annual CJCS Rotational Forces Request PLANORDs are not included. The supported commander has to re-define force requirements when the plan transitions from planning to execution in order to request allocation of forces to execute, inserting a time delay. The supported CCDR force planner is required to enter force requirements for a given plan into separate processes using separate tools (JOPES and Joint Capabilities Requirements Manager [JCRM]) that are currently not interoperable.

UNCLASSIFIED

UNCLASSIFIED

- 651 • **(CG-5) GFM risk assessments neither fully analyze nor communicate the risks of sourcing**
652 **decisions.** Current risk assessments capture risk to the providing Service and force provider as
653 well as operational risk to the requesting Combatant Command. These risk assessments lack the
654 opportunity costs/risk to other Combatant Commands, the risks caused by ad-hoc and in-lieu-of
655 (ILO) sourcing strategies, and the cumulative impact on the force pool's readiness. As global
656 demand changes for the highest priority operations and forces previously apportioned are
657 allocated to these high priority operations, the GFM enterprise processes does not capture the
658 associated risk to other geographic CCDRs' operations or potential future operations.
659 Establishing, training, and deploying ad-hoc and ILO forces are necessary to meet current CCDR
660 requirements. These sourcing strategies decrement the source unit's integrity and decrease the
661 operational capability of the source unit to perform its designed mission. Quantifying and
662 articulating the longer-term risks from ad-hoc and ILO sourcing strategies on the overall force
663 pool is difficult and the perception is these risks are not fully considered. The cumulative risk of
664 incremental allocation decisions are difficult to translate to strategic risk in support of the
665 Chairman's Risk Assessment. Additionally, the processes for assessing cumulative risk rely on
666 detailed analysis of many previous individual allocation decisions. This after-the-fact analysis
667 does not provide decision makers with the foresight to understand the impact of individual
668 decisions on the force pool's ability respond to other potential missions. The challenge of
669 understanding the second and third order effects of incremental allocation decisions create late
670 sourcing (prioritization), planning, and force development guidance updates. The design of the
671 GFM risk analyses reflect "snapshot in time" risks associated with individual decisions and do not
672 effectively capture cumulative risk impacts and effects. The lack of the cumulative risk
673 potentially presents an ever-increasing strategic risk to ongoing operations, future force
674 availability and force structure, and the overall ability to execute plans or respond to emerging
675 events.
676
- 677 • **(CG-6) Joint and Service GFM data (e.g., readiness, force structure, force alignment, and**
678 **data context) are neither globally visible nor accessible.** Lack of global visibility is primarily
679 due to a lack of commonly agreed upon GFM data requirements on the part of the JPEC
680 consumers and a hesitancy to make existing GFM data accessible on the part of joint and Service
681 data producers. Visibility of this Joint and Service GFM information, along with historical,
682 current, and planned force alignment information, is necessary to support allocation,
683 apportionment, contingency sourcing, preferred force generation, and APEX, as well as provide a
684 reference for decision makers to form their risk analyses. The ability to determine force
685 availability is necessary to enable identification of more realistic required force levels and
686 increased feedback to Services' force development and generation processes. The lack of global
687 visibility causes users to make assumptions based on available data from various sources. These
688 assumptions are often inaccurate or lack of context leading to erroneous conclusions. Force
689 providers are then forced to waste time defending their data and recommendations. These
690 misinterpretations erode operational trust, creating the current negative feedback loop within the
691 GFM enterprise and continually decreasing the sharing and visibility of GFM data. If the
692 alignment of forces is not visible, Combatant Command planners cannot update plans based on
693 changing force availability assumptions.
694
- 695 • **(CG-7) Allocation is not aligned with the budgeting process.** Operational requirements and
696 allocation tasking lag the budget decision process. While the rotational fiscal year (FY) sourcing
697 cycle has been accelerated in recent years, the Services' budget inputs are due before rotational
698 allocation decisions are made. In addition, there is no formal mechanism to update the *President's*

UNCLASSIFIED

UNCLASSIFIED

Budget upon submission to Congress to reflect the rotational decisions. Therefore, Services have to fund unanticipated rotational allocation requirements “out of hide.” As additional incremental emergent allocation decisions are determined, including Requests For Forces (RFF) from Combatant Commanders, Services end up with orders to allocate and deploy forces without the funding to support those deployments. The recent public comments from the President regarding funding for OIF and Operation Enduring Freedom (OEF)-Afghanistan via supplemental budgets may invalidate the assumptions on funding contained within the CJCS *FY11 JFP PLANORD* (paragraph 4.A.7). The same assumptions used in FY10 place some of the planned deployments in the FY10 *GFM* at risk.

- **(CG-8) GFM feedback to the force development/force generation decision process is late and incomplete.** As global demand for forces and capabilities are validated, the analysis and prediction of force structure shortfalls is currently done via the persistent shortfalls analysis. The persistent shortfall analysis does not fully identify force pool mismatches with global demand since ad-hoc and ILO sourcing do not reflect in the lack of resources in the force pool. The execution of this analysis after the FY rotational sourcing efforts (late) results in a lag within the guidance developed in the *GDF* to direct changes to the force structure. Emergent allocation decisions after the FY rotational sourcing do not influence the persistent shortfall until the end of the next FY rotational sourcing cycle (late).
- **(CG-9) The capacity of the GFM enterprise is limited by deficiencies in manning and supporting tools.** GFM personnel perform contingency and execution sourcing. Contingency and execution sourcing require the same detailed level of understanding of the structure, readiness, availability, alignment, capabilities, and limitations of the force pool. There are a critically limited number of personnel with the requisite knowledge to perform contingency and execution sourcing and supporting fielded tools and/or programs of record. Funding and staffing of the requisite GFM stakeholders is critical to the GFM enterprise. The capacity shortfall of the GFM enterprise is most visible in the limited number of plans the Global Force Management Board (GFMB) schedules for contingency sourcing each quarter. CCDRs regularly request more plans to be contingency sourced than the Services, JFPs, and their Service components have the capacity to support. This GFM capacity deficiency, coupled with the CCDR staffs’ limited ability to accurately generate feasible preferred forces, limits the CCDR planners’ ability to conduct in-depth plan sourcing feasibility assessments. This also limits the ability of the Joint Staff and OSD to have detailed sourcing feasibility factored in to plan risk assessments and reviews. To achieve the APEX goal of having “living plans,” the capacity of the GFM enterprise to provide sourcing support to CCDR plans needs improvement.
- **(CG-10) CCDRs do not have an effective means to predict the availability of forces for plans.** CCDRs do not have the ability to quickly and accurately determine the availability of forces when choosing preferred forces. CCDRs also do not have the visibility of the structure and alignment of the force pool to be able to estimate sourcing feasibility for a given capability. CCDRs require this capability to support multiple aspects of force planning across JOPES and to achieve the APEX goals of producing and maintaining “living plans.” Force planning supports each phase of the planning process and is critical to the development of mission analysis, concept development and plan assessment. Without an accurate picture of the force pool, CCDRs are limited in their means to use force availability information to support the planning process. The foundational assumption for planning is that the forces in apportionment tables will be reasonably available. Global demand is constantly changing and the availability of forces changes to meet

UNCLASSIFIED

UNCLASSIFIED

that global demand thus challenging the validity of that assumption. CCDRs do not have access to real or near-real time force availability to better enable preferred force generation. Improving the preferred force generation capability directly supports plan feasibility analysis, adaptability, validity and the Refine, Adapt, Terminate, or Execute (RATE) APEX functions.

- **(CG-11) A common understanding of the capabilities and limitations of contingency sourcing process does not exist across all GFM stakeholders.** The purpose of contingency sourcing is to provide the sourcing feasibility analysis component of the planning risk analysis process. Current contingency sourcing is limited to matching available unit identification codes (UIC) to unit type codes (UTC) based on the specified contingency sourcing guidance and assumptions for the individual sourcing effort. The limitations mandated by the contingency sourcing guidance (e.g., assumptions, constraints, restraints), coupled with both an inability to accurately project future force readiness data and less than execution level of detail in the force request, restrict JFPs and Service force providers from following the processes utilized for execution sourcing. These limitations create a discrepancy between the expected results of contingency sourcing and the products actually produced.
- **(CG-12) Force providers do not have sufficient lead-time to train ad-hoc/ILO forces for near-term force requirements.** Services often have to provide ad-hoc and ILO sourcing alternatives. Ad-hoc forces, by their very nature, usually take longer to organize, man, train and equip than standing units. Services do not begin resourcing, forming, and training ad-hoc and ILO forces until after the allocation decision and deployment orders are released. Consequently, force providers experience challenges deploying trained and ready ad-hoc and ILO forces in time to meet emergent CCDR-requested latest arrival dates. The achievable deployment dates are, in part, a function of the timeliness of the allocation decision and deployment orders. Force providers experience further difficulties fielding ad-hoc and ILO forces when circumstances change and cause CCDRs to change the force requirements after the force is already preparing for deployment. These changes in the force requirement necessitate changes to the manning, training, and equipping for the ad-hoc and ILO forces, often causing further gaps between requested and achievable latest arrival dates. Although Reserve Component forces exist in the Services' inventories, the deployment preparations required for Reserve Component forces makes meeting near-term Latest Arrival Dates (LADs) challenging.

4.4 Redundancy Analysis Results

The assessment investigated DOTMLPF-P redundancies identified in several earlier studies. The 2007 Joint C2 (JC2) Capability Portfolio Manager (CPM) QT Program Review 2009 (PR-09) CBA identified a strong possibility of DOD developing duplicative, conflicting joint planning policy, doctrine and policy if the Joint Operational Planning Process (JOPP), JOPES, APEX, GFM and Force Readiness development were not closely coordinated. The CBA found *JOPES Volumes I-III* are being rewritten to incorporate APEX changes in planning, indicating DOD is taking action to reduce redundancies and conflicts in guidance.

The *C2 JCD* and *C2 Migration Strategy* identified multiple tools created within the planning community and focused on various aspects of force management. At that time, there were several initiatives/programs by stakeholders attempting to address the same gaps, making it difficult to merge the best-of-breed features into a service-oriented architecture (SOA).

Since then, some of those competing tools have merged or fallen by the wayside (Figure 4). Collaborative Force Building Analysis Sustainment and Transportation (CFAST) was terminated. Global Status of

UNCLASSIFIED

UNCLASSIFIED

Resources and Training System (GSORTS) is being integrated into the Defense Readiness Reporting System (DRRS). Joint Event Scheduling System (JESS), Joint Force Requirements Management (JFRM), Joint Capabilities Requirements Tool (JCRT), and Force Requirements Enhanced Database (FRED) have integrated and have become functions within the JCRM.

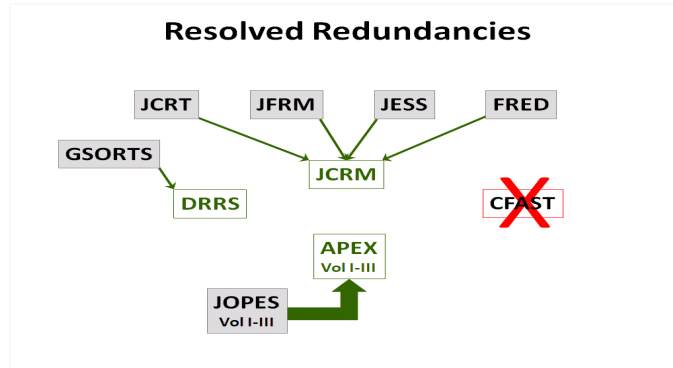

Figure 4 Resolved Redundancies

4.5 Capability Gap Table

Table 4 displays a part of the GFM ICD Capability Table. The full table, contained in Appendix D – Section 10, summarizes all capabilities, relevant attributes, and associated metrics.

Table 4 GFM ICD Capability Table Summary

PRIORITY	TIER 1 & TIER 2 JCAS	DESCRIPTION	Attribute	METRICS	MINIMUM VALUE
4	Force Support - Force Mgt - Force Preparation - Human Capital Mgt Command and Control - Organize - Understand - Planning - Decide - Direct - Monitor Net-Centric - Enterprise Services - Information Assurance Building Partnerships - Communicate - Shape Corporate Mgt & Support	Assess the Impact and Risk of Proposed Changes to the Forces Pool	Accessibility	All involved commands and organizations can access common, authoritative current alignment (and context) of DOD force structure.	Historical (6 years past), Current (near real time), future (3 year projection).
				All involved commands and organizations can access common, authoritative Department of Defense (DOD) force structure (Service) data (historical, current, future).	Data updated and accurate (2 years 90, at 1 year 95, within 6 months 98) To within a week (near real time)
				All involved commands and organizations can access common, authoritative force demands (historical, current, future).	Historical (6 years past), Current (real time), future (3 year projection).
				All involved commands and organizations can access common, authoritative force readiness information (historical, current, and future).	Historical (6 years past), Current (within 1 week), future (3 year projection).
			Agility	Ability to adjust sourcing solutions based on changing circumstances	Adjust sourcing solutions between competing FTNs within a week.
				Ability to deploy trained and ready forces in time to meet the operational need(s)	Support development and maintenance cycles for OPORD and associated products: Crisis Action Planning: <24 hours Contingency Planning: < 6 months
				Ability to quickly assess force availability and readiness to determine plan feasibility	Determine preferred forces less than 1 hour and contingency source 1 week
				Ability to quickly tailor the force pool, or deploying forces to meet operational needs	Changes to force pool data/information are visible globally NRT of input
				Ability to quickly update force guidance for development and employment of the force based on changes to force alignment	Support development and maintenance cycles for OPORD and associated products: Crisis Action Planning: <24 hours Contingency Planning: < 6 months

5 Threat And Operational Environment

Appendix I contains the threat and operational environment analysis.

6 Ideas for Non-Materiel Approaches (DOT LPF-P Analysis)

This section describes the non-materiel approaches recommended for implementation through a joint DOTMLPF Change Recommendation (DCR). These recommendations are listed under the most relevant DOTMLPF and Policy (DOTMLPF-P) category, but require cross-category action. For example,

UNCLASSIFIED

UNCLASSIFIED

Doctrinal recommendations usually have Training implications and often have Leadership and Education and Personnel impacts. One materiel recommendation is made in this section for non-materiel approaches because it is an evolutionary development to an existing capability, not a new materiel information system. The steps highlighted in Figure 5 identify the details of the solutions analysis methodology.

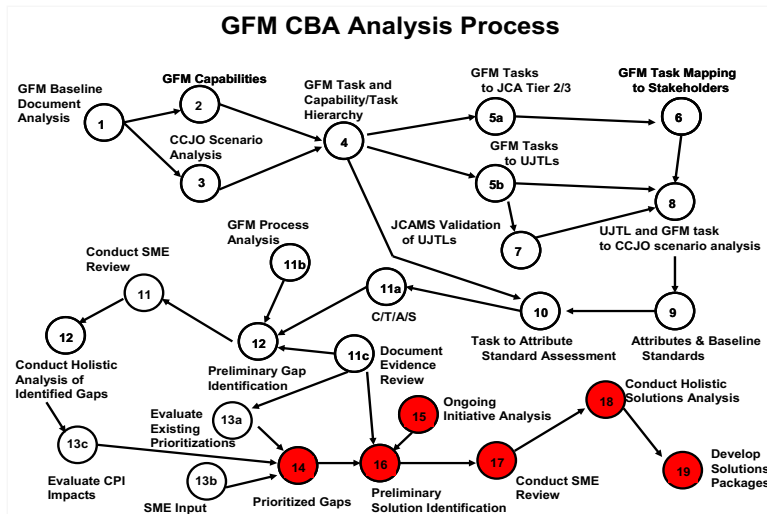

Figure 5 GFM CBA Solutions Analysis Process

6.1 Solutions approaches assumptions

The following assumptions helped frame the GFM CBA.

- Any solutions cannot interrupt the on-going operation of the planning and GFM processes.
- Infrastructure and resources are available to implement most approaches.
- Education curricula and sufficient development staff are available at appropriate levels of military schools for the necessary creation and/or modification of programs of instruction.
- New programs may be required to address GFM implementation.
- All gap solutions, materiel or non-materiel should seek to balance capability, needs, risk, affordability and sustainability.

The solutions analysis considered potential multi-purpose approaches to solving capability gaps across priority categories, in addition to recognizing the uniqueness of the separate articulation of the attributes and standards for alignment by echelon. While the needs analysis looked at operational risk for each gap (and the results reflected a need to close gaps with high operation risk and high expected utility), the solutions analysis looked at eliminating or mitigating gaps using solutions with high expected utility and low technical risk. The recommended solutions affect more than one gap area; moreover, gaps areas are dependent upon actions involving combinations of DOTMLPF-P.

6.2 Doctrine

Update doctrine, standards, and procedures to reflect a singular, integrated approach to GFM and operational planning. The necessary doctrinal updates will take their basis from corresponding updates to strategic guidance and policy to ensure synchronization of GFM across the DOD in accordance with (IAW) *CJCSI 5120.02, Joint Doctrine Development System*. This planning capability should look beyond the current doctrinal JOPP – Integrated Data Strategy (JOPP-IDS) and integrate GFM, force readiness, and APEX. Instead of continuing the separate development of JOPP-IDS, JOPEs, and APEX, combine

UNCLASSIFIED

UNCLASSIFIED

the three efforts into one streamlined planning process. Combining them will provide a truly joint operational planning capability and enable the DOD to integrate planning and assessment efforts with civil agencies and allies. The first step in this process would be the inclusion of GFM-specific language into the pertinent joint and Service doctrinal publications. Examples of potential doctrine documents requiring updated GFM language and information include, but are not limited to:

Joint Publications (JP)

- *JP 1-0: Personnel Support to Joint Operations*
- *JP 1-02: Department of Defense Dictionary of Military and Associated Terms*
- *JP 2-0: Joint Intelligence*
- *JP 3-0: Joint Operations*
- *JP 3-35: Deployment and Redeployment Operations*
- *JP 4-05: Joint Mobilization Planning*
- *JP 4-09: Joint Doctrine for Global Distribution*
- *JP 5-0: Joint Operation Planning*

Army Publications

- *Field Manual (FM) 1: The Army*
- *FM 1-01: Generating Force Support for Operations*
- *FM 3-0: Operations*
- *FM 3-100-21: Contractors on the Battlefield*
- *FM 100-10-2: Contracting Support on the Battlefield*
- *FM 3-24: Counterinsurgency*
- *FM 4.0: Logistics*
- *FM 4.01.011: Unit Movement Operations*

Marine Corps Publications

- *Marine Corps Order (MCO)/Navy/Marine Corps (NAVMC) P3000.18, Marine Corps Force Deployment Planning and Execution Process Manual*

Air Force Publications

- *Air Force Doctrine Document (AFDD) I, Air Force Basic Doctrine*
- *AFDD2, Operations and Organization*
- *Air Force Instruction 10-400 Series*

Navy Publications

- *Navy Tactics, Techniques, and Procedures (NTP) 3-02, Amphibious/Expeditionary Operations Air Control*

6.3 Organization

Fulfill the objectives of the *GFM Continuous Process Improvement (GFM-CPI) Charter* and with Force Management Executive Committee (FMEC) oversight, pursue opportunities for DOTMLPF-P solutions while applying purposeful design that synchronizes efforts with processes related to GFM.

Establish a GFM Program Element (PE) or include GFM in another PE to ensure funding and resourcing in future years, continuing the GFM-CPI process. In accordance with *DOD Instruction (DODI) 7045.7*,

UNCLASSIFIED

UNCLASSIFIED

requests for changes to the Future Years Defense Programs (FYDP) structure, such as establishing new PE codes and definitions or providing updates to existing PE titles and definitions, shall be submitted to OSD, Cost Assessment and Program Evaluation (CAPE), for coordination with the DOD components. Potentially, an increase in staffing GFM stakeholders is necessary to increase the GFM planning capacity until appropriate policies, procedures, and tools can develop to reduce the overall workload. The ranks and skill sets for this increased manning would have to be determined and validated.

6.4 Training

Provide the warfighter with an objective/integrated JOPP-IDS capability, enabling force providers to prepare a standardized training curriculum and provide deployed commanders with proficient personnel while limiting the need for on-the-job training of staff officers within a high operations tempo (OPTEMPO) environment. This would require modified courses that include GFM or a new joint GFM training course. The development and addition to existing joint planner training of GFM specific evaluations would improve overall understanding of GFM concepts, practices, and procedures.

6.5 Leadership and Education

Reduce three education avenues (JOPES, APEX, and GFM) into one training curriculum, providing deployed commanders with proficient planners while reducing on-the-job training for staff officers. Consolidated professional military education (per *CJCSI 1800.01D, Officer Professional Military Education Policy [OPMEP]*), programs of instruction, and instructor education will enable future leaders to leverage future GFM readiness and force visibility improvements. Improved education that incorporates GFM with all other aspects of planning will allow commanders and decision makers at all levels to present and assess multiple, relevant force employment options for current operations, exercises, and contingency planning. Policy changes and evolutionary development of existing materiel capabilities is needed to provide transparency of information and increase in operational trust across the GFM enterprise.

6.6 Personnel

Reduce the requirement and time to conduct on-the-job training for staff officers. Reduce the Military Education Level Four (MEL-4) instructor training requirements by streamlining the three separate processes into one integrated process.

6.7 Policy

Review and update DOD and Joint policies to ensure accurate documentation and representation of the current state of GFM. Updated policy is vital to the production of accurate and authoritative doctrine and procedures.

Link orders for allocated forces to Service funding streams in order to augment Service budgets. This is the best means to pay for the added costs incurred by additional tasking to deploy forces.

Consolidate the GFM procedures from the *GFMIG*, *Joint Staff Business Rules*, annual *CJCS Rotational Forces Request PLANORD*, annual *CJCS JFP PLANORD*, and the annual *GFMAP* into a *CJCSI/CJCSM*. This *CJCSI/CJCSM* would provide a coherent, end-to-end process from planning to execution, incorporate the fundamentals of APEX, and outline GFM processes, roles, and responsibilities. Integrate GFM with other processes in applicable *CJCSIs* and *CJCSMs*. These would include, but are not limited to:

- *CJCSM 3122.01A, JOPES, Volume I, (Planning Policies and Procedures)*

UNCLASSIFIED

UNCLASSIFIED

- *CJCSM 3122.02C, JOPES, Volume III, (Crisis Action Time-Phased Force and Deployment Data Development and Deployment Execution)*
- *CJCSM 3122.03C, Joint Operation Planning and Execution System, Volume II, (Planning Formats and Guidance)*
- *CJCSI 3110.13 Series, Mobilization Guidance For The JSCP (U)*
- *CJCSI 8501.01A, Chairman of the Joint Chiefs of Staff, Combatant Commanders, and Joint Staff Participation in the Planning, Programming, Budgeting, and Execution System*

Modify existing GFM procedures and risk specifications to require analysis and presentation of risk to CCDRs, as well as future plans, with each allocation recommendation.

6.8 Materiel

Continue development efforts to improve and institutionalize GFM tools and data sharing. Ongoing efforts, such as Adaptive Planning Pilot – Global Force Management Planning and Execution (AP Pilot - GFMPEX) Joint Concept Technology Demonstration (JCTD), and GFM-DI, are essential to ensuring data and interface standardization and interoperability across the GFM enterprise. Currently existing tools, such as JOPES and JCRM, must incorporate a capability to provide improved preferred force generation based on sound sourcing logic. This is necessary to improve the CCDRs' ability to meet APEX planning time horizons.

Establish the JCRM tool as a Program of Record or incorporate JCRM into an existing Program of Record and, since US Joint Forces Command (USJFCOM) does not have acquisition authority, hand off development/maintenance to a system developer, such as the Defense Information Systems Agency (DISA). The developer and GFM stakeholders will need to work together to develop a process to respond to changes in GFM and APEX policies faster than the historical response time for the Global Command and Control System (GCCS) (months versus years). Prioritized metrics and requirements (codified and maintained in institutional processes and databases) are required as minimum essential elements to provide a validated system with a "faster response time" to user requirements. Tools supporting GFM allocation planning must have the reliability to be able to support issuing orders within four hours for crisis action planning and execution. An identified and agreed upon process is necessary for JCRM to transition to a system developer. The evolutionary development of this existing capability is necessary because it enables the above non-materiel changes. By themselves, DOT_LPF-P changes are insufficient to mitigate the gaps without establishing JCRM as a program and maintaining relevancy by continuing spiral upgrades. Likewise, corresponding DOT_LPF-P changes must accompany improvements to the capabilities proved by JCRM.

Continue and accelerate initiatives to provide a globally visible view of the force structure and its alignment, such as GFM-DI. Services must maintain both accurate and accessible force structure data, to include updated UTCs, and the updated alignment information (assignment, allocation, and apportionment of the force structure). Materiel solutions may also employ Global Information Grid (GIG) 2.0 characteristics to provide the desired capabilities and outcomes across the GFM enterprise. Force structure visibility is necessary down to the individual and deployable unit level for each service. Recommend pursuing the Organization Unique Identifier (OUID) construct as it shows more promise and flexibility than the legacy UTC and UIC.

7 Final Recommendations

The final recommendation proposes 12 gap solutions approaches within four prioritized solution categories: Vision, Doctrine/Policy, Processes/Procedures, and Supporting Technology.

UNCLASSIFIED

UNCLASSIFIED

- GFM Vision is the first priority since it is foundational.
- Clear, effective vision allows the generation of accurate, insightful GFM policy, doctrine and guidance. The creation of effective processes and procedures requires accurate policy and doctrine.
- GFM processes/procedures are a systematic series of actions followed in solving a problem or accomplishing a task to a desired end. Supporting technology should come from established processes and procedures.
- GFM supporting technology, although the last listed solution category, is of significant importance because, in today's fast-paced OPTEMPO, technology enables fulfillment of the GFM Vision.

Table 5 outlines recommended solutions and demonstrates how each impacts multiple elements of the DOTMLPF-P spectrum. Non-materiel potential solutions are annotated by DOT_LPF-P, and materiel potential solutions are outlined via the IT, Evolutionary (EV), and Transformational (TR) categories.

Table 5 Prioritized Solution Categories and Gap Solution Statements

Prioritized Solution Category and Gap Solution Statement	D	O	T	Materiel IT EV TR			L	P	F	(P)
Vision										
Future vision for GFM following alignment of assignment, allocation, and apportionment requires defining.	•						•			•
Develop continuous GFM end state definition and improvement.		•					•			•
Doctrine/Policy										
GFM should be fully incorporated into existing doctrine and procedures to sufficient detail to ensure synchronization across all GFM stakeholder processes (e.g., APEX, Deployment, Distribution).	•		•				•	•		•
GFM standards and practices should be documented in appropriate DOD policies (e.g., Chairman of the Joint Chiefs of Staff Instructions [CJCSI] and Chairman of the Joint Chiefs of Staff Manuals [CJCSM]) to create the authoritative basis for doctrine and procedure documentation.	•		•				•			•
GFM doctrinal refinement suitable for the development of standardized programs of instruction and establishment of training initiative needs to be developed across DOD.	•		•				•	•		•
Processes/Procedures:										
GFM-based risk analysis needs to not only continue to capture risks to the force provider, supported and supporting Combatant Commands, but also needs expansion to analyze the opportunity costs/risks (resulting from incremental allocation decisions) to other Combatant Commands.				•			•			•
A process needs to be developed linking allocation to the budgeting process reducing the lag between operational requirements/tasking and budget decisions.	•	•	•				•			•
Changes across DOTMLPF-P need to be instituted to reduce the lag between DOD guidance and the force pool structure/alignment.	•	•		•	•		•	•		•
Increase capacity of the sourcing community by increasing available trained personnel and integrating interoperable compatible tools. Provide Combatant Commands with the flexibility to generate preferred forces as needed to support planning assessments.	•	•	•	•	•		•	•		•
Supporting Technology:										
Provide global visibility of Joint and Service force data (e.g., readiness, force structure, force alignment, and data context) by establishing and enforcing data, interface, and collaboration standards.			•	•	•		•	•		•
Actualize the full GFM Enterprise potential by increasing operational trust between GFM stakeholders by providing adequate transparency of information.			•	•	•		•			•

UNCLASSIFIED

Prioritized Solution Category and Gap Solution Statement	D	O	T	Materiel IT EV TR	L	P	F	(P)
Improve existing and emerging GFM information technology so they are available across the enterprise and able to be rapidly updated and improved.			•	•	•	•		•

Appendix J contains more detail on the solution packages. Table 6 is a mapping of the recommended solutions to capability gaps. The gaps map to more than one solution statement.

Table 6 Capability Gap Solutions Statements Mapped to Capability Gaps

Prioritized Solution Category and Gap Solution Statement	Capability Gap #
Vision	
Future vision for GFM following alignment of Assignment, Allocation and Apportionment requires defining.	CG-1, CG-6, CG-7, CG-8
Establish a mechanism for developing continues GFM process and materiel improvement.	CG-1, CG-3, CG-4, CG-5, CG-6, CG-7
Doctrine/Policy	
GFM should be fully incorporated into existing doctrine and policy in sufficient detail where standardized programs of instruction can be developed.	CG-1, CG-2, CG-3, CG-4, CG-5
GFM standards and practices should be documented in appropriate Chairman of the Joint Chiefs of Staff Instructions (CJCSIs) and Chairman of the Joint Chiefs of Staff Manuals (CJCSMs).	CG-1, CG -2, CG-4
GFM doctrinal refinement suitable for the development of standardized programs of instruction and establishment of training initiative needs to be developed across DOD.	CG-1, CG-2, CG-3, CG-9
Processes/Procedures:	
GFM-based risk analysis captures force provider and operational risk to the requesting COCOM. Analysis process needs expansion to where the opportunity costs/risks (resulting from incremental allocation decisions) to other COCOMs are apparent.	CG-5, CG-6, CG-7, CG-11, CG-12
A process needs to be developed linking allocation to the budgeting process reducing the lag between operational requirements/tasking and budget decisions.	CG-4, CG-5, CG-6, CG-7, CG-8, CG-11, CG-13
Changes across DOTMLP-P need to be instituted to reduce the lag between DOD guidance and that of force pool structure/alignment.	CG-1, CG-4, CG-6, CG-7, CG-10, CG-11, CG-12
Sourcing analysis capacity does not support APEX plan development time goals. Increase planner capacity by increasing available trained personnel and integrating interoperable compatible tools. This would provide COCOMs with an effective means to predict availability of forces for planning.	CG-1, CG-3, CG-4, CG-6, CG-8, CG-9, CG-12
Supporting Technology:	
Provide global visibility of Joint and Service force data (e.g. readiness, force structure, force alignment, and data context) by establishing and enforcing standardized data structures.	CG-4, CG-5, CG-6, CG-8, CG-9, CG-10
Actualize the full GFM Enterprise potential by increasing operational trust between GFM stakeholders by providing adequate transparency of information.	CG-4, CG-5, CG-6, CG-7, CG-8, CG-11
Establish and enforce data standards amongst GFM stakeholders.	CG-3, CG-4, CG-6, CG-8, CG-10

Figure A-1-1 Global Force Management – Operational Context and Overview Diagram

The mutually supporting, interrelated Department of Defense (DOD) processes are viewed here through a Global Force Management (GFM) lens. The stakeholders depicted include Office of the Secretary of Defense, the Joint Staff, the Services (including theater Service Components), the Joint Force Providers and Joint Force Manager (including their assigned Service Components and subordinate commands), Combatant Commanders (including their assigned Service Components, Joint Task Forces, and other subordinate commands). The GFM alignment (assignment, apportionment, and allocation) processes, tools, and data maintain synchronization across stakeholders and integration with related processes. This enhances the ability to efficiently and effectively align the force structure to respond to the complex, dynamic global environment. Each stakeholder shares data and information to collaboratively determine the best use of the force structure to meet a situation. Impacts and risks of re-aligning the force structure are visible and all stakeholders collaboratively develop mitigation strategies. Planners obtain common force structure data directly from the entities responsible for building and maintaining the data. Formally and rigorously specified force structure data contains unambiguously defined semantics implemented so GFM-related computer programs can readily exploit the data. Stakeholders share a common understanding of the meaning of GFM data. Changes in any of the processes depicted as overlapping and interacting with GFM influence not only GFM directly, but often influence changes in other processes. Seamless iterative interaction and integration between these related processes are necessary for the success of each of these processes as well as success of the missions these processes exist to support. The process interactions are:

- The Force Development Process takes input from many sources. Global demand for forces is one of those inputs. Likewise, GFM projects alignment of both current and projected force structure, so GFM is influenced by the changes taking place to the force structure through the Force Development Process.
- The Planning Process is both influenced by and influences GFM. As the fidelity of a given plan is refined, the alignment of the force pool necessarily influences the plan. The forces assumed in planning must be aligned to the supported CCDR if/when a plan transitions to execution. This re-alignment, in turn, affects other planning efforts. The current planning process is Joint Operational Planning and Execution System (JOPES) and is in the process of transitioning to Adaptive Planning and Execution (APEX).
- Command and Control by the Joint Force Commander includes establishing clear lines of command. Orders and direct planning assumptions dealing with the force structure (apportionment) communicate the alignment of forces. The orders and assumptions also direct near steady state Combatant Command authorities of forces (assignment) and re-alignment of forces and deployments to other combatant commands to respond to world events (allocation). GFM alignment processes both influence and are influenced by the Command and Control processes.
- The Deployment Process includes the tasks of preparing, deploying, sustaining and redeploying forces. Timelines for each of the tasks performed in the Deployment Processes inform the GFM alignment processes when planning the schedules to implement allocation and apportionment. Likewise, the Deployment Process receives and executes the deployment schedules generated from the GFM alignment processes.

UNCLASSIFIED

UNCLASSIFIED

- 1015 • The Distribution Process includes the tasks of moving units and sustainment worldwide. The distribution and transportation capabilities
1016 influence the alignment schedules developed in the GFM process. Likewise, the GFM process deployment orders influence both planning and
1017 execution within the Distribution Process.
- 1018 • While GFM does not manage the entire collection capabilities in all branches of government, GFM interacts with the Interagency Process by
1019 providing a conduit to non-DOD agencies to meet CCDR capability requests, for both planned and executed operations. As other (non-DOD)
1020 instruments of national power are committed to support CCDR capability requests, the GFM orders provide a vehicle to inform the JPEC of
1021 the directed sourcing solution.
- 1022 • Current operations, while formally defined as a subset of crisis action planning, require rotational forces for the long wars we are currently
1023 engaged in. As the goals and strategies for these operations change, these changes directly impact the alignment of the force structure.
1024 Likewise, the capabilities resident in the force structure influence the strategies and plans to prosecute the operations.
- 1025 • Readiness is a key indicator of availability when planning force deployments and aligning the force. The alignment of the force likewise
1026 influences the flow of efforts and resources to prepare forces to deploy.

Section 2 – Global Force Management Process Integrated View

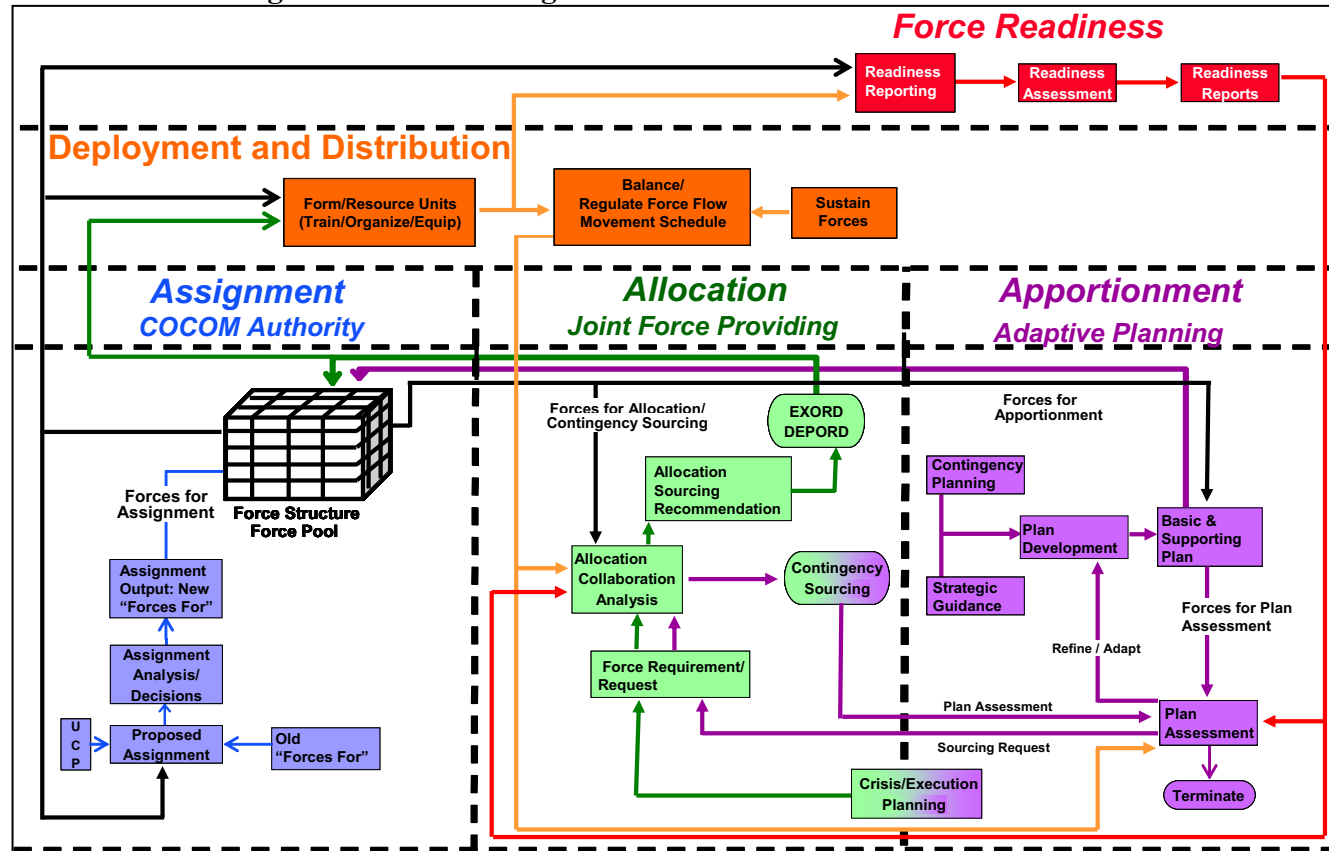

Figure A-2-1 Global Force Management Process Integrated View

The "Integrated View" shows the alignment of the force structure through the assignment, allocation, and apportionment processes. Since each process is based on the force pool, actions in one process affect the others. This view also shows GFM process interaction and the need for seamless integration with the adaptive planning and execution, deployment, distribution, and readiness processes.

Appendix D – Tasks, Attributes and Standards

Section 1 – Global Force Management (GFM) Tasks

The 19 Global Force Management (GFM) tasks were derived from an extensive literature search. The primary documents used to derive these tasks were, *UCP*, *JSCP*, *GFMIG*, *GEF*, *Joint Staff Business Rules and SecDef Operations Book (SDOB) Process Message*, annual *CJCS Rotational Forces Request Planning Orders (PLANORD)*, annual *CJCS JFP PLANORDs*, *Forces for Unified Commands Memorandum*, annual *CJCS GFM Allocation Plan (GFMAP)*, and annual *Apportionment Tables*. This list and the descriptions were refined through subject matter expert (SME) discussion at the GFM Continuous Process Improvement Workshop conducted 17-20 August 2009. Variations of a particular task may appear at more than one GFM stakeholder echelon (Combatant Command, Office of the Secretary of Defense [OSD]/Joint Staff, Service, joint force provider [JFP]).

Task Definitions

1. **Develop Force Lists for Concept Courses of Action (COA):** Based on (among other considerations) strategic guidance, mission assumptions, coalition contributions, mission requirements, determine US military force lists necessary to accomplish mission essential tasks.
2. **Select COA and Corresponding Force List:** Based on (among other factors) initial estimate of sourcing feasibility, select COA and corresponding US military force list.
3. **Develop Individual Force Requirements:** Based on planned or operational mission and tasks, develop unit level force definitions with specified supporting information (force tracking number [FTN] level detail).
4. **Review/Validate Requirements:** Assess and gain an understanding of the requested force or capability in relation to the overall operation. Review force requirements for completeness and accuracy, certifying the validity of the force requirement.
5. **Determine Sourcing Guidance:** Generate new guidance, develop guidance assumptions, or review existing guidance based on the priority of the operation and the individual force request. Allocation sourcing guidance includes assignment of a JFP.
6. **Estimate Available Forces/Capabilities:** Globally assess the forces/capabilities in the force pool that could potentially support a force requirement.
7. **Develop Sourcing Options:** Evaluate the operational force availability and commitment, force readiness, fiscal ability and transportation feasibility of potential sourcing solutions. Determine potential global sourcing options that satisfy the force requirement.
8. **Generate Global Sourcing Solution:** Collaboratively evaluate the sourcing options to identify the recommended force(s), and the military department, Department of Defense (DOD) agencies, and/or Combatant Commander (CCDR) supplying the force to the supported commander. Additionally, identify actions required to provide the force (e.g., capability substitution recommendation[s], mobilization action[s], required). Staff the potential sourcing solutions with appropriate departments, Services, commands and agencies. Take action to resolve conflicts and/or shortfalls in the solutions.
9. **Determine Impacts and Risks:** Assess the impacts and risks associated with a particular sourcing solution. This includes an identification of the impact the sourcing solution will have on other requirements, operations, missions, war-plan response timelines and other national objectives pursuant to *Joint Strategic Capabilities Plan (JSCP)* and *Guidance for Employment of*

UNCLASSIFIED

UNCLASSIFIED

- 1243 *the Force (GEF)* taskings, any proposed risk mitigation actions, and any additional issues
1244 identified.
- 1245 10. **Review Sourcing Solution:** Determine whether the sourced capability (e.g., unit, manpower,
1246 materiel, and time) is militarily and politically supportable, consistent with the force requirement,
1247 and in compliance with *GEF*.
- 1248 11. **Approve Sourcing Solution:** Approval to execute or continue planning based on the sourcing
1249 solution (includes assignment, allocation and apportionment).
- 1250 12. **Direct Execution of Sourcing Solution:** Develop appropriate orders and messages (assignment
1251 tables, apportionment tables, *Global Force Management Allocation Plan [GFMAP]*, execution
1252 orders [EXORD], deployment orders [DEPORD], time-phased force deployment document
1253 [TPFDD], etc.) directing execution of a sourcing solution.
- 1254 13. **Provide Feedback into Force Development Decision Process:** Assess global demand and
1255 shortfalls and provide feedback into the force development decision process.
- 1256 14. **Form and/or Resource Unit (Train, Organize, Equip):** Align resources to generate mission
1257 specific capabilities within a unit/force. This includes the mobilization processes for reserve
1258 component and National Guard forces.
- 1259 15. **Monitor and Report Readiness:** Track and report force preparations and to meet mission
1260 requirements.
- 1261 16. **Balance and Regulate Force Flow Based on Movement and Joint Reception, Staging,
1262 Onward Movement, and Integration (JRSOI) Capacity:** Analyze and adjust force flow to
1263 maximize mission requirements within transportation/logistic capacity.
- 1264 17. **Track and Report Force Deployments and Redeployments:** Monitor and report status of
1265 deployments and redeployments.
- 1266 18. **Assign Tasks/Missions to Units:** Evaluate capabilities of sourced units against current
1267 missions/tasks. Review capabilities of the sourced forces and sourcing shortfalls against required
1268 mission tasks. Determine and assign mission tasking to source units. Feedback changes to force
1269 requirements.
- 1270 19. **Sustain Forces:** Align resources to sustain force for duration of deployment (personnel,
1271 equipment, additional training, and transportation capacity).
- 1272

UNCLASSIFIED

UNCLASSIFIED

1273 **Section 2 – Global Force Management (GFM) Task, Echelon, Alignment Matrix**

1274 In developing the task mapping for each stakeholder through their subordinate echelons, the study team used a vertical method to determine how
1275 the tasks applied to each of the three processes. Each stakeholder conducts common tasks for assignment, apportionment, and allocation although
1276 with a different focus and to different degrees of granularity.

1277 The differences of focus and granularity are not readily apparent at the macro level. Thus, it may appear that there are few differences between the
1278 stakeholders. However, at a micro view, the differences between them are significant. For example, executing the "Develop Force Lists for
1279 Concept Course of Action (COA)" task at the Joint Staff level focuses on strategic planning, while the same task at the Combatant Command level
1280 focuses on operational planning. Both organizations are executing the same task, but the focus, methods, and results are vastly different.

1281

1309 **Section 3 – Global Force Management (GFM) Capability to Task Alignment**

1310 In this section, the 19 Global Force Management (GFM) tasks are mapped to the four GFM capabilities.
1311 A particular task may appear under more than one capability. This reflects the fact the task may not be a
1312 discrete event, but rather extend across one or more of the GFM processes.

1313 Shape and Align the Force Pool

- 1314 • Select Course of Action (COA) and Corresponding Force List
- 1315 • Determine Sourcing Guidance
- 1316 • Develop Sourcing Options
- 1317 • Generate Global Sourcing Solution
- 1318 • Review Sourcing Solution
- 1319 • Approve Sourcing Solution
- 1320 • Direct Execution of Sourcing Solution
- 1321 • Provide Feedback into Force Development Decision Process
- 1322 • Form and/or Resource Unit
- 1323 • Balance and Regulate Force Flow Based on Movement and Joint Reception, Staging, Onward
- 1324 Movement, and Integration (JRSOI) Capacity

1325 Provide Visibility of the Global Availability and Operational Readiness of the Force Pool

- 1326 • Determine Sourcing Guidance
- 1327 • Develop Sourcing Options
- 1328 • Generate Global Sourcing Solution
- 1329 • Approve Sourcing Solution
- 1330 • Direct Execution of Sourcing Solution
- 1331 • Form and/or Resource Unit
- 1332 • Monitor and Report Readiness
- 1333 • Balance and Regulate Force Flow Based on Movement and JRSOI Capacity
- 1334 • Track and Report Force Deployments and Redeployments
- 1335 • Assign Tasks/Missions to Units

1336 Globally Source and Deploy Joint Forces

- 1337 • Develop Force Lists for Concept COAs
- 1338 • Select COA and Corresponding Force List
- 1339 • Develop Individual Force Requirements
- 1340 • Review/Validate Requirements
- 1341 • Determine Sourcing Guidance
- 1342 • Estimate Available Forces/Capabilities
- 1343 • Develop Sourcing Options
- 1344 • Generate Global Sourcing Solution
- 1345 • Determine Impacts and Risks
- 1346 • Review Sourcing Solution
- 1347 • Approve Sourcing Solution
- 1348 • Direct Execution of Sourcing Solution
- 1349 • Provide Feedback into Force Development Decision Process
- 1350 • Form and/or Resource Unit (Train, Organize, Equip)

Section 4 – Global Force Management (GFM) Attributes

The six attributes of Global Force Management (GFM) capabilities and tasks were derived from the *Command and Control Joint Capabilities Document (C2 JCD)*, the *Force Management Joint Functional Concept (FM JFC)*, and the relevant prioritized capability attributes identified by the combatant commands through the Senior Warfighter Forum (SWaF) process for C2, logistics and net-centric capabilities. SWaF approved attributes are underlined in Figure D-4-1, Pedigree of GFM Attributes. The six selected were assessed to be the most pertinent of a lengthy combined listing.

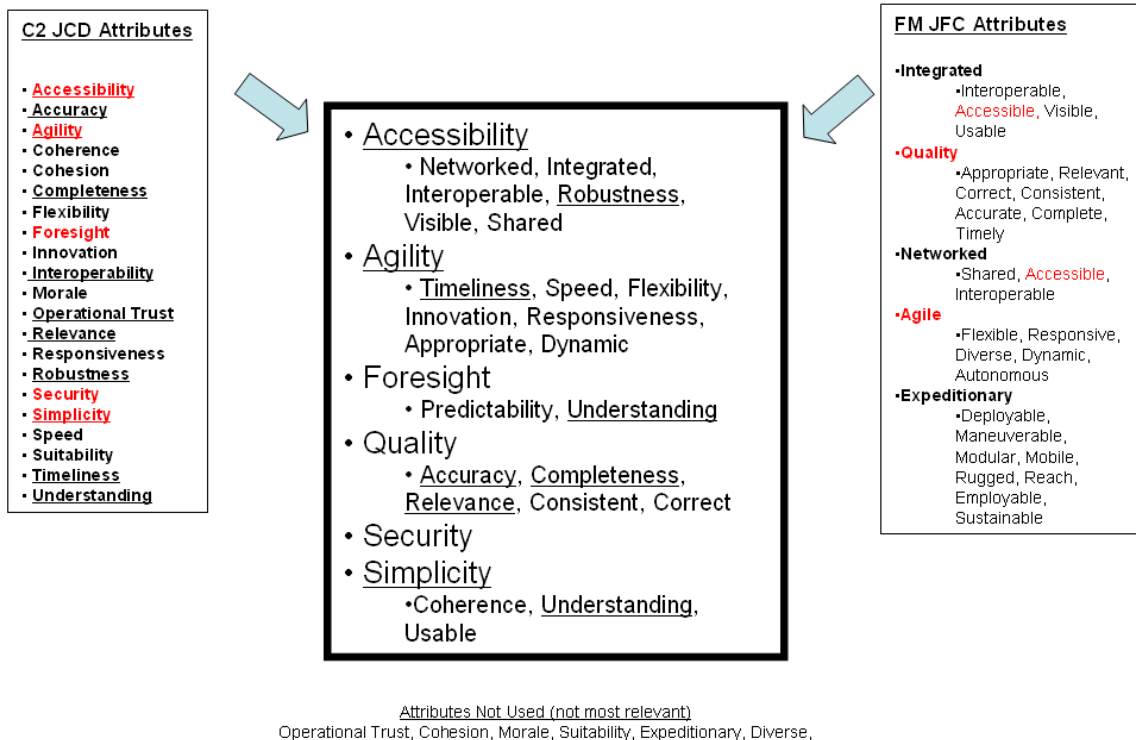

Figure D-4-1 Pedigree of GFM Attributes

Accessibility: The ability of all involved commands at every level (strategic, operational and tactical), at any time and from anywhere, to pull, push, or view relevant, shared data and information to facilitate interoperability and collaboration. Accessibility to a standardized, networked, Joint, deployable GFM tool enhances robust, visible, shared decision-making.

Agility: The ability to respond effectively and in a timely and innovative manner to changing circumstances in order to get the right force to the right place at the right time. To be agile, the force requirement needs to be able to be defined quickly, and the decisions need to be timely and the force identification and deployment preparation process needs to be innovative and flexible in order to field a

UNCLASSIFIED

UNCLASSIFIED

1384 suitable and appropriate force. The entire process needs to be seamless and responsive to changing
1385 circumstances, capable of rapid transition to execution.

1386 **Foresight:** The ability to recognize, understand and anticipate capabilities and forces in the force pool as
1387 well as recognize warfighter needs in time to identify create or adapt relevant, appropriate forces to meet
1388 those needs. The ability to provide adequate, reliable notification to enable the force to properly prepare
1389 for the mission. The ability to quickly anticipate and predict the risks and opportunity costs of (second-
1390 and third-order effects) of proposed changes to the force pool in assignment, apportionment, or allocation.

1391 **Quality:** Totality of characteristics including an accurate, complete, relevant description of the force
1392 requirement, clear concise and accurate orders, shared, relevant data available in the correct context that
1393 facilitates decision making and action. Quality in this context also refers to accurate, complete, and
1394 relevant consistent force visibility supporting more informed assignment, apportionment, and allocation
1395 decisions.

1396 **Security:** A condition resulting from the establishment and maintenance of protective measures ensuring
1397 a state of inviolability from hostile acts or influences (*Joint Publication 1-02*). Security includes
1398 preventing loss, destruction, exploitation or denial of use of information or of a system by establishing,
1399 maintaining and implementing protective measures and risk management.

1400 **Simplicity:** Simplicity applies to GFM across the Doctrine, Organization, Training Materiel, Leadership
1401 and Education, Personnel, Facilities, and Policy (DOTMLPF-P) spectrum, markedly focused on
1402 functionality and avoiding unnecessary complexity (both primary and secondary complications).
1403 Simplicity facilitates direct access to coherent, relevant force structure information, clarity of
1404 requirements, efficient force providing structures, and common force management processes. From a
1405 materiel aspect, simplicity is the quality or state of few elements, an intuitive interface and enables easy,
1406 quick instruction. Simplicity does not mean a lack of advanced solutions or capability stagnation.

UNCLASSIFIED

Section 5 – Baseline Standards

The baseline standards/metrics for the six attributes of Global Force Management (GFM) were derived from an evaluation of GFM Tasks and the Universal Joint Tasks List (UJTL) against the *Capstone Concept for Joint Operations (CCJO)* scenarios/vignettes. Multiple standards are associated with each attribute because the attributes apply to various aspects of the GFM tasks, which, in turn, are often performed at more than one echelon of the stakeholder community. The minimum value(s) for each standard/metric is listed under each standard.

Accessibility

1. All involved commands and organizations can access common, authoritative Department of Defense (DOD) force structure (Service) data (historical, current, future).
 - Data updated and accurate (2 years 90, at 1 year 95, within 6 months 98) to within a week (near real time).
2. All involved commands and organizations can access common, authoritative current alignment (and context) of DOD force structure.
 - Historical (6 years past), Current (near real time), future (3 year projection).
3. All involved commands and organizations can access common, authoritative force demands (historical, current, future).
 - Historical (6 years past), Current (real time), future (3 year projection).
4. All involved commands and organizations can access common, authoritative force readiness information (historical, current, and future).
 - Historical (6 years past), Current (within 1 week), future (3 year projection).

Agility

1. Ability to adjust force requests based on changing circumstances
 - Force requests can be changed and submitted within 30 minutes; changes to simple force requests can be evaluated and adjudicated within a week.
2. Ability to adjust sourcing solutions based on changing circumstances
 - Adjust sourcing solutions between competing FTNs within a week.
3. Ability to quickly tailor the force pool, or deploying forces to meet operational needs
 - Changes to force pool data/information are visible globally near-real time (NRT) of input
4. Ability to deploy trained and ready forces in time to meet the operational need(s)
 - Support development and maintenance cycles for operations order (OPORD) and associated products:
 - Crisis Action Planning: < 24 hours
 - Contingency Planning: < 6 months
5. Update plans based on force availability (goal of every 6 months, per *Adaptive Planning [AP] Roadmap II*)
 - Support development and maintenance cycles for OPORD and associated products:
 - Crisis Action Planning: < 24 hours
 - Contingency Planning: < 6 months
6. Ability to quickly assess force availability and readiness to determine plan feasibility (determine preferred forces and contingency source)
 - Determine preferred forces less than 1 hour and contingency source 1 week
7. Ability to quickly update force guidance for development and employment of the force based on changes to force alignment (6 months, per *AP Roadmap II*)
 - Support development and maintenance cycles for OPORD and associated products:

UNCLASSIFIED

UNCLASSIFIED

- Crisis Action Planning: < 24 hours
- Contingency Planning: < 6 months

Foresight

1. Ability to anticipate deployment schedules and produce accurate deployment orders without multiple iterations
 - Deployment orders articulate the force ordered to deploy to the smallest deployable entity. Changes to deployment orders unnecessary unless changing circumstances change the deployment plan.
2. Ability to predict unit(s) deploying to meet a tasked mission
 - High degree of certainty (0-6 months)
 - Moderate degree of certainty (7-24 months)
3. Amount of feedback from force sourcing to Service force generation models
 - NRT feedback from sourcing decisions
4. Ability to anticipate impact to force pool of pursuing a military option to a national priority
 - Impacts of force allocation decisions to all COCOMs and Services understood in <30 days
5. Ability to anticipate comprehensive impacts of changes in strategic and sourcing guidance
 - Support development and maintenance cycles for OPORD and associated products:
 - Crisis Action Planning: < 24 hours
 - Contingency Planning: < 30 days
6. Ability to anticipate, understand, and articulate comprehensive impacts and risks of different sourcing courses of action (COA), sourcing a new or expanded operation, or handling an in lieu of (ILO) or ad-hoc sourcing option
 - Impacts of force allocation decisions to all COCOMs and Services understood in <24 hours
7. Ability to develop the force pool to meet anticipated Combatant Command force demand signals
 - High degree of certainty (0-6 months)
 - Moderate degree of certainty (7-24 months)
8. Ability to predict demand on force pool in order to and provide timely feedback to force development
 - High degree of certainty (0-6 months)
 - Moderate degree of certainty (7-24 months)
9. Ability to understand future priority and availability of forces in the force pool (and, therefore, tailor plan force lists to better use available forces)
 - High degree of certainty (0-6 months)
 - Moderate degree of certainty (7-24 months)
10. Ability to accurately predict force requirements and alignment in time to resource the Services to produce those forces
 - Force allocations feeds the POM/PR cycle
11. Ability to anticipate force demands and alignment in time to give predictable deployment schedules to units and their soldiers, sailors, airmen, Marines, and civilians
 - High degree of certainty (0-6 months)
 - Moderate degree of certainty (7-24 months)
12. Iterative cycles of defining force requests, determining feasibility of sourcing and adjusting plans and force requests based on limited availability in the planning and execution processes are reduced
 - High degree of certainty in first iteration

UNCLASSIFIED

UNCLASSIFIED

1499 Quality

- 1500 1. Clarity and relevance of strategic and sourcing guidance
- 1501 • Support development and maintenance cycles for OPORD and associated products:
- 1502 ▪ Crisis Action Planning: <24 hours
- 1503 ▪ Contingency Planning: <30 days
- 1504 2. Completeness and accuracy of force requests
- 1505 • Support development and maintenance cycles for OPORD and associated products:
- 1506 ▪ Crisis Action Planning: <24 hours
- 1507 ▪ Contingency Planning: <30 days
- 1508 3. Feasibility of force sourcing options can be determined accurately
- 1509 • Changes to current force pool data/information are visible globally NRT
- 1510 4. Tasking guidance (orders) and force alignment is clear and executable
- 1511 • Support development and maintenance cycles for OPORD and associated products:
- 1512 ▪ Crisis Action Planning: <24 hours
- 1513 ▪ Contingency Planning: <30 days
- 1514 5. Risks associated with sourcing options, recommendations, decisions, tasking and changes to force
- 1515 pool structure and alignment are accurate and complete
- 1516 • Impacts of force allocation decision to all COCOMs and Services understood in <24
- 1517 hours
- 1518 6. Ability to define, understand, and use force pool data (including readiness) in context
- 1519 • Support development and maintenance cycles for OPORD and associated products:
- 1520 ▪ Crisis Action Planning: <24 hours
- 1521 ▪ Contingency Planning: <30 days

1522 Security

- 1523 1. No compromise of information that impairs operations
- 1524 • There is no compromise of classified information or information that impairs operational
- 1525 effectiveness
- 1526 2. Strategic guidance is maintained safe from enemy and potential enemy exploitation
- 1527 • There is no compromise of classified information or information that impairs operational
- 1528 effectiveness
- 1529 3. Force requests, force pool and force pool alignment is maintained safe from enemy exploitation.
- 1530 • Secure information maintained on secure networks
- 1531 4. US force capabilities and limitations are safe from enemy exploitation.
- 1532 • There is no compromise of classified information or information that impairs operational
- 1533 effectiveness
- 1534 5. Force requirements, deployment orders and enabling capabilities are safe from enemy counter
- 1535 command and control (C2) influences or acts.
- 1536 • There is no compromise of classified information or information that impairs operational
- 1537 effectiveness

1538 Simplicity

- 1539 1. Transparency and ease of understanding of force pool information
- 1540 • Training allows action officers to understand presentation of force pool information with
- 1541 1 week on the job training. Depiction of force pool can be understood within 10 minutes
- 1542 2. GFM decisions rely on common functional processes known/understood by all.
- 1543 • Planners have requisite training and education

3. Operations can be executed from tactics, techniques, and procedures (TTP) without real time or near-real time guidance.
 - Planning and execution TTPs are free of conflicting guidance.
 4. The tools developed to align and provide visibility of the complex force pool are focused on the needs of the consumer, avoiding unnecessary data overload.
 - Force pool data can be filtered and queried (exported) to each and every individual data field.

Section 6 – Task, Attributes, Standards Alignment

Table D-6-1 maps the baseline standards for Global Force Management (GFM) (described in Section D-5) to the most relevant attributes associated with each of the 19 GFM tasks. Figure D-6-1 identifies the most relevant attributes for each of the tasks. The attributes were assessed in terms of their applicability to each task, and the assignments range from two to six of the attributes per task. The table also matches the baseline standards to the most relevant attributes for each task. The numbers shown under the “Associated Baseline Standards” column refer to the item numbers of the various standards for the attributes as shown in Section D-5. For example, the “3” shown for “Accessibility” against the task, “Develop Force Lists for Concept Courses of Action (COA),” refers to the standard, “All involved commands and organizations can access common, authoritative force demands (historical, current, future).”

1565 **Section 7 – Task–Attribute–Standard Assessment**

1566 The tables in Section 7 (Tables D-7-1 through D-7-19) summarize the assessment of Global Force Management (GFM) enterprise performance with respect to the applicable standard for the most
1567 relevant attributes under each of the 19 tasks. The tables combine the information presented in the previous Sections of Appendix D, and add a color-coded assessment representing an evaluation
1568 of the standard against its minimum value. These overall-enterprise assessments may differ significantly from the perceived performance assessment by the stakeholders in each echelon of the
1569 GFM stakeholder community.

1570 Listed underneath each task title are the GFM capabilities that task supports. The comments column of the table elaborates on the performance assessment for each standard. The comment number
1571 corresponds to the color-coded standard number. Figure D-7-1 provides an explanation of each table.

1572 These tables do not represent the gap analysis, but, rather, were a source of input to the gap analysis.

Table D-7-1 Develop Force Lists for Concept COA

Capabilities: Globally Source and Deploy Joint Forces

Accessibility	1	2	3			1. Authoritative force structure data is not available. The data that is available is not updated based on force structure alignment. 2. The assignment and apportionment tables are updated annually; however the goal of AP per AP Roadmap II is to update plans every 6 months. Annual updates are not sufficient to meet this goal. Assignment and apportionment tables do not specify down to the unit level, therefore they do not, by themselves, provide full visibility of the alignment of the force pool. CJCSI 3110.13C tasks each service to maintain a mobilization plan that builds upon the apportionment tables. These Service plans, however are not accessible to all the stakeholders and do not reflect changes in the dynamic force allocation process. The annual GFMAP, while consolidating most allocation into one order, does not give visibility to the unit level. The unit level detail is not updated from the initial JCRM nomination until the ULN is updated in JOPES weeks prior to deployment with the actual deploying unit. 3. While JCRM gives most operational force requirements, there are still uncaptured requirements, such as for the services to perform their Title 10, USC responsibilities.
Agility	1	5	6			1. While plans are updated, the timeline for plan development (and the force lists within those plans) lags behind the changing circumstances. There are no triggers to demand the force list be generated. 5. As allocation changes weekly, there is no trigger to update COAs in contingency and crisis action planning. Turnaround time for contingency plans relies on annual apportionment tables. This does not meet the 6 month goal per the AP Roadmap II. 6. While preferred forces and contingency sourcing occur today, contingency sourcing is limited based on staffing capacity at the JFP service component level. COCOMs and subordinate commands do not have a reliable way to assess feasibility of "sourcing" because there is no authoritative force structure database that shows future alignment. 6. While preferred forces and contingency sourcing occur today, contingency sourcing is limited based on staffing capacity at the JFP service component level. COCOMs and subordinate commands do not have a reliable way to assess feasibility of "sourcing" because there is no authoritative force structure database that shows future alignment.
Simplicity	1	2	4			1. Force pool information is different for each service. Force pool information is kept differently in the various databases thus the context in which the information is gathered is not able to be easily defined and the databases are not interoperable and/or do not relay the information in context. 2. The GFM process is not understood by a core cadre. There is little or no joint training. Most personnel working in the GFM process learn from their predecessors with on-the-job training (OJT). The specified JOPES planning process does not require the same data in a force requirement (request) in the planning process that is required in the CJCS specified allocation sourcing process. 4. While the tools today are functioning, the tools developed to date are not interoperable. The data are related but captured in the context to optimize the sub-process the tool was built to perform. The tools are not optimized for the entire GFM enterprise. APEX requires building plans that can rapidly transition to execution. Per current policies and procedures the JOPES ADP and the FTN data requirements in JCRM are different and not currently interoperable. While progress has been made to implement the FTN as a data field in the ULN to enable future linkage, development and procedures are not yet in place to seamlessly link the two, Therefore when plans are built in JOPES, the force requirements for those plans is not in the format to enter the allocation process in JCRM. This difference in data requirements delays the transition from planning to execution. The FY CJCS Rotational Forces Request and JFP PLANORDs specify data fields that are not specified in the JOPESREP. Although the FTN and JRC fields have been added to JOPES and the JOPESREP, the other 37 data fields specified in the FY11 CJCS Rotational Forces Request and JFP PLANORDs is not captured early in the currently specified JOPES planning process. Adding the FTN and JRC to the ULN data mitigates some of the problem and provides the potential of eventually linking the two databases, it does not, in itself, solve the data interoperability problem. When a plan transitions to execution, the supported commander has to re-define force requirements in order to request the forces via the allocation process. Re-defining force requirements inserts a time delay. The supported CCDR force planner is required to enter force requirements for a given plan into two separate processes using two separate tools (JOPES and JCRM) that are not yet integrated.
Security	1	2	3	4	5	1/3/4. Much information on force sourcing can be found on unsecure systems such as unsecure phone calls, NIPRNET or other unclassified systems. The compilation of force sourcing and deployment information available on unsecure systems could be a risk. 2/5. Although room for improvement, allocation orders (GFMAP), Assignment and apportionment tables are maintained on secure systems (SIPRNET). Some service orders to units and individuals are on non-secure systems.

1579

1580

1581

1582

Table D-7-2 Select Course of Action (COA) and Corresponding Force List

Capabilities: Shape and Align the Force Pool, Globally Source and Deploy Joint Forces

Foresight	2	4	6	9	12	2. The COCOMs are not able to accurately predict the feasibility of sourcing a given force requirement in a COA, and therefore loses the benefit of being able to tailor a plan that maximizes available forces (types and units). Most deployments are via the allocation process, although some are from the assignment process. The GFMAP does not specify units for most FTNs. COCOMs do not have the visibility of the actual unit sourced and do not have visibility of changes to unit sourcing. The GFMAP tasks a force provider. Given the lead time of the GFMAP, units do change from the order to the actual deployment. In planning, COCOMs do not have the ability to accurately determine which unit would source a given requirement (either in preferred forces or contingency sourcing) The assignment and apportionment tables do not specify down to the individual unit level. 4. Estimates through OIF and OEF have consistently underestimated the forces required for the mission. There is no forcing function to link missions and national tasking to force levels. 6. While there are risk estimates, the currently specified risks are articulated for the force provider and the supported COCOM. The opportunity costs of using the force to support other potential supported COCOMs or missions is not specified and often not articulated. 9. COCOMs are required to specify requirements 2-3 years out and submit those requirements for rotational allocation. While these force demands are visible, the sourcing of these rotational and later the emergent requirements with the current stress on the force is often to ILO and ad-hoc sourcing strategies, making prediction of available forces difficult (for example artillery units are being retrained and sourced as ILO MP units. The demand signal is for MP units, although that impacts availability of the artillery units. The reduced availability of artillery units is not visible to COCOM planners. 12 The number of changes to COCOM requirements to "open the aperture" for sourcing to overcome shortfalls is increasing. Forces are apportioned against multiple plans as well as most forces are currently on a deployment rotation for the allocation process. Force requests are constantly being updated and force deployment schedules are constantly being updated. This cycle feeds upon itself since COCOMs do not have the full visibility of how the force structure is being aligned.
Quality	2	3	6			2. COCOMs are required to specify (or project) requirements 2-3 years out and submit those requirements for rotational allocation. The farther out COCOMs are required to project requirements the less accurate they are able to be since things change over time. (New missions are added, missions change, and the enemy gets a vote) Since COCOMs cannot predict the sourcing method for a given FTN, or service for a given JMD-IA, each FTN or Electronic Joint Manpower and Personnel System (eJMAPS) line # has to written for any service to source with any given strategy (standard/ILO/ad-hoc or joint) To adjust the requirement to be able to source using a strategy that was not anticipated takes several iterations (RFF 920 or RFF 937 are examples). 3. COCOMs are challenged to accurately determine preferred forces in the planning process. Additionally COCOMs do not have the tools to accurately assess (or estimate) sourcing feasibility prior to submitting an emergent or rotational force request in the allocation process. 6. Force pool information is often misunderstood and taken out of context.
Security	1	2	3	4	5	1/3/4. Much information on force sourcing can be found on unsecure systems such as unsecure phone calls and NIPRNET. The compilation of force sourcing and deployment information available on unsecure systems could be a risk. 2/5 Although room for improvement, allocation orders (GFMAP), Assignment and apportionment tables are maintained on secure systems (SIPRNET). Some service orders to units and individuals do reference classified documents.
Accessibility	2	4				2. Visibility of the alignment, allocation and apportionment of the force pool, would allow a more detailed analysis of sourcing feasibility of a given COA. The assignment and apportionment tables are updated annually, however the goal of AP per AP Roadmap II is to update plans every 6 months. Annual updates are not sufficient to meet this goal. Assignment and apportionment tables do not specify down to the unit level, therefore not full visibility. The annual GFMAP, while consolidating most allocation into one order, does not give visibility to the unit level. The unit level detail is not updated from the initial JCRM input until the ULN is updated in JOPES weeks prior to deployment with the actual deploying unit. Because of these gaps planners are unable to accurately determine feasibility of sourcing a given COA. 4. While force readiness information is available for standing units, many force requirements are being sourced with ad-hoc sourcing strategies with individuals grouped into a new unit. In FY10, approximately 2/3 of the Navy sourced FTNs were sourced with ad-hoc sourcing strategies. There is no readiness information on these ad-hoc capabilities until the unit is formed. Additionally the COCOMs do not have visibility of the force providers' ability to build a capability until after it is requested and the iterative allocation sourcing process begins.

1583

Table D-7-3 Develop Individual Force Requirement

1584 Capabilities: Globally Source and Deploy Joint Forces

Agility	1	5				1. While changes to force requests are happening, each one requires a complete re-staffing through the entire process. This takes time and is done at the cost in planner capacity of accurately sourcing other force requests. 5. Since preferred forces cannot be accurately predicted, plans cannot be tailored to use less stressed unit types. Contingency plans are currently not directed to be developed to use less stressed force types until the IPR process is well underway, thus increasing the number of iterations
Quality	2	5				2. Acknowledging there is always room for improvement, procedures are in place and most force requests are as accurate as the COCOMs and their subordinate commands can predict. There is a working review process in place. The Joint Staff reviews requests. There are functioning methods for JFPs and force providers to request clarification and improvements to force requests. 5. When specifying the operational risk of not sourcing, the COCOM must assume that other FTNs are going to be sourced. That assumption has proven not valid on many occasions. The compounded risk of many FTNs not being sourced has too much iteration to accurately estimate. Additionally, while there are risk estimates, the currently specified risks are articulated for the force provider and the supported COCOM. The opportunity costs of using the force to support other potential supported COCOMs or missions is not specified and often not articulated. Sourcing risks are often not able to be determined until after the allocation decision and the unit is being prepared for the mission. Since the visibility of the potential use of the force pool is not available, the COCOMs, JFPs, and JS/OSD are not able to specify the risk of potential sourcing.
Accessibility	1					1. COCOMs are required to specify requirements 2-3 years out and submit those requirements for rotational allocation. While these force demands are visible, the sourcing of these rotational and later the emergent requirements with the current stress on the force is often to ILO and ad-hoc sourcing strategies, making prediction of available forces difficult (for example artillery units are being retrained and sourced as ILO MP units. The demand signal is for MP units, although that impacts availability of the artillery units. The reduced availability of artillery units is not visible to COCOM planners.)

1585

1586

1587

1588

1589 Capabilities: Globally Source and Deploy Joint Forces

Table D-7-4 Review/Validate Requirement

Agility	1	6	7				1. Since the COCOMs cannot predict force pool alignment, they are challenged to tailor force requests for the available forces. Although procedures are in place, these changes are being done manually on a case-by-case basis. 6. Senior decision makers consistently demand more accurate estimates of feasibility sourcing early in the review process. Since force pool data is difficult to interpret and the sourcing strategies difficult to predict, the feasibility estimates are not as accurate as they should be. 7. Because early feasibility estimates are not accurate, senior decision makers are not able to update sourcing guidance (and detailed priorities) in time to mitigate force shortfalls before other sourcing iterations are completed. The number of changes to COCOM requirements to "open the aperture" for sourcing to overcome shortfalls is increasing. Forces are apportioned against multiple plans as well as most forces are currently on a deployment rotation for the allocation process. Force requests and force deployment schedules are constantly being updated. This cycle feeds upon itself since COCOMs do not have the full visibility of how the force structure is being aligned.
Foresight	4	5	7	8	10	12	4. The strategic implications are difficult to articulate in the incremental decisions in the allocation process. The assignment and allocation processes do not fully capture the long term demand for the force structure. 5. Given the complex sourcing strategies in use today, the impact of changes to sourcing guidance are complex, and must be analyzed on a case by case basis. 7. While forces are being tailored to meet COCOM demands, the ability to anticipate these needs remains limited. 8. Persistent shortfalls are not identified in time to drive the POM budgeting processes. The shortfalls influence the budgeting process after the budget is in place. 10. The allocation process timeline is not synched with the POM process. COCOM demands and the risks of sourcing those are not fully developed in time to provide as much input to the POM process as is required and desired. 12. The impacts of meeting COCOM demands that drive changes to sourcing guidance is not able to be anticipated. The result is multiple iterations of changing planning guidance driving new COCOM force requests through the sourcing analysis.
Simplicity	2	3	4				2. The GFM process is not understood by a core cadre. There is little or no joint training. Most personnel working in the GFM process learn from their predecessors with OJT training. In the review and validation process, the lack of understanding of common terms causes confusion. 3. Senior guidance is required during the many staffing actions because of misunderstandings of the process. 4. Many of the various tools in use today are not tailored for the GFM processes. Analyzing the data takes a lot of manpower, time and effort.
Accessibility	2	3					2. Although the assignment and apportionment tables and the GFMAP (allocation order) are available, these documents do not have the specificity to the unit level, therefore the alignment of the force pool remains unclear.

1599

Table D-7-5 Determine Sourcing Guidance

Capabilities: Shape and Align the Force Pool, Provide Visibility of the Global Availability and Operational Readiness of the Force Pool, Globally Source and Deploy Joint Forces, Assess the Impact and Risk of Proposed Changes to the Force Pool

Foresight	4	5	6	9	10		4/5. Visibility of the force pool, the collaborative nature of planning, and the complexity of sourcing analysis does not lend to timely understanding of the implications and risks in order to (IOT) anticipate problems and issue relevant guidance. 6. While sourcing risks are determined, it remains beyond the capabilities to anticipate the risks before a long case by case analysis is completed. 9. COCOMs are challenged to refine the "unconstrained" planning assumption due to lack of force pool structure and alignment visibility. 10. With the high stress on the force structure for the foreseeable future, the readiness of forces is limited by service resourcing. Since demand is ever-changing, sourcing guidance and priorities drive the resourcing (training/equipping/personnel and money). Changes to sourcing guidance after the service resources begin flowing are challenging to implement.
Agility	6	7					6. Senior decision makers consistently demand more accurate estimates of feasibility of sourcing early in the review process. Since force pool data is difficult to interpret and the sourcing strategies difficult to predict, the feasibility estimates are not as accurate as they should be. 7. Because early feasibility estimates are not accurate, senior decision makers are not able to update sourcing guidance (and detailed priorities) in time to mitigate force shortfalls before other sourcing iterations are completed.
Security	1	2	4				1. Some orders are staffed, generated and disseminated on unsecure systems. 2. Strategic guidance is maintained on secure systems. 4. The compilation of information on unsecure systems could increase risk.

1600
1601

Table D-7-6 Estimate Available Forces/Capabilities

1602 Capabilities: Globally Source and Deploy Joint Forces

Agility	3	6					3. Changing unit METs in order to create ad-hoc and ILO sourcing solutions to meet COCOM demands is a process that requires time to implement. Even some standard force sourcing solutions require tailoring forces (manning, training and equipping) to meet the specific mission. COCOM demands may change inside the timelines required to form deployable forces. 6. Many individual staffing actions are ongoing simultaneously. Many of these staffing actions are inter-related and, at times, the solutions are mutually exclusive, thus limiting the time to come up with dynamic solutions
Accessibility	1						1. Force structure visibility is limited and inconsistent between the services.
Quality	3	5	6				3. The lack of force structure and alignment visibility increases the iterative nature of finding potential sourcing options. Forces already committed and deployed are not easily recognized. The services and components have to repeatedly answer the same questions various times, in various contexts. JFPs, JS and OSD continuously ask for assessments of sourcing forces that have already been determined to be unavailable. Answering these redundant questions expends some of the planning capacity that could have been better spent improving the quality of meeting COCOM demands. 5/6. The available force pool data is not available in a common format understandable by the stakeholders. Lack of a common understanding of the force pool and the alignment of the force pool leads to inaccurate assumptions and interpretations of the force pool and its alignment.

1603
1604

1605
1606

Table D-7-7 Develop Sourcing Options

1607 Capabilities: Shape and Align the Force Pool, Provide Visibility of the Global Availability and Operational Readiness of the Force Pool, Globally Source and Deploy Joint Forces

Agility	2	3	6				2. With the high stress on the force pool, allocation decisions that later prove to support a lower priority are difficult to re-address when other sourcing recommendations are being considered. Those forces committed in previous decisions are often considered unavailable for sourcing other requirements, even if those are a higher priority. This limits the flexibility of the force providing community source the highest priority missions. 2/3. Due to the ad hoc nature of many of the sourcing solutions, and the time to build and train those forces, changing COCOM requirements cannot be satisfied quickly. 6. COCOMs do not have a quick, accurate way to assess future force availability and alignment to support selecting preferred forces accurately or assessing sourcing feasibility prior to submitting force requests.
Foresight	1	2	6	7	10	12	1. Most deployment orders have to be modified multiple times as conditions change. GFM Stakeholders do not have the usable, common picture of the force pool, structure, alignment, resourcing, transportation and employment to allow foresight. 2. In the early planning stages, COCOMs do not have accurate foresight of potential units deploying to meet their force requests or plan COA lists (preferred forces). 6. Risks are defined for the requesting COCOM and the force provider, but there are rarely risks to other COCOMs and their operations/plans on the opportunity costs of using a force to meet one request. Services have not been effective at communicating the risks of non-standard sourcing solutions. The incremental decisions to use non-standard sourcing solutions prevent the services from providing accurate future assessments. 7. While rotational force demand signals can and are being evaluated, the fog of war prevents some COCOM demands from being anticipated, however future rotational force demand analysis lags behind the POM budgeting decision timelines. 10. The incremental allocation decisions require adjustments to the already established budget, limiting predictability. 12. The complexity and incremental changes to the alignment of the force pool make predictability difficult.
Quality	1	3	5	6			1. Due to the incremental allocation decision process, the sourcing guidance is not always clear and relevant. 5. The risks determined when developing options lack some specified operational and force provider risk data and do not address the potential uses for other missions. 3. The number of JFP changes to allocation recommendations and orders speaks to the ability to accurately project feasible solutions. 6. The sourcing options and the potential changes to force pool alignment and impacts on force pool structure are not visible and therefore decrease the accuracy of developing future sourcing options.

1617

Table D-7-8 Generate Global Sourcing Solution

Capabilities: Shape and Align the Force Pool, Provide Visibility of the Global Availability and Operational Readiness of the Force Pool, Globally Source and Deploy Joint Forces, Assess the Impact and Risk of Proposed Changes to the Force Pool

Agility	2	3	4	6			2. The collaborative nature of the staffing process limits the flexibility of COCOMs to change force requests after submission due to the limitations of Force Providers ability prepare forces to deploy. 3. While forces are being tailored to meet the missions, the training and resourcing process for those missions takes time and, at times is not as dynamic as COCOMs would like. 4. Most deploying forces are trained and ready to perform their tasks. Most forces arrive on time. 6. Common force structure and alignment visibility limit earlier generation of accurate sourcing solutions.
Foresight	6						6. Anticipating sourcing risks are difficult because of assumptions required to generate future sourcing risks are often not validated.
Quality	1	3	5	6			1. Prioritization is not consistent at the individual request level. Current prioritization goes down to the Operation/mission level. 5. Opportunity costs and risks of sourcing options do not capture other potential uses for the unit. 3. The number of changes to ordered sourcing solutions and the units recommended speaks to the inability to accurately align the force pool ahead of time. 6. The different assumptions and interpretations of force pool structure and alignment data cause inaccuracies to be propagated through the decision process.

1618
1619

Table D-7-9 Determine Impacts and Risks

1620 Capabilities: Globally Source and Deploy Joint Forces, Assess the Impact and Risk of Proposed Changes to the Force Pool

Foresight	5	6	8	11		5. As solutions are determined for 2-3 years out, the challenge assuming and interpreting current strategic and sourcing guidance causes inaccuracies in the ability to determine future impacts and risks. 6. The dynamic nature of force requests and sourcing solutions causes inaccuracies in the ability to determine future impacts and risks. 8. The rotational sourcing recommendations are determined after the POM inputs. Due to the dynamic nature of force requests and sourcing solutions, changes to the rotational deployment schedules are not budgeted. 11. While improvement has been made, the dynamic nature of deployment schedules requires many changes to unit deployment timelines.
Accessibility	1	2	3	4		1. Lack of a common frame of reference between stakeholders to the force structure limits ability to articulate risk. 2. Lack of detailed force alignment (down to the unit level) limits ability to formulate and articulate risk. 3. Inability to capture the demands on the force structure limits ability to determine and articulate risk. 4. The various stand-alone force readiness tracking tools and the differences in the reporting criteria limit the ability to determine risk.
Agility	3	4	5	6		3. Force requests are assumed static while developing sourcing solutions and determining risks. However the dynamic nature of combat operations coupled with the inability to predict sourcing of related force requests requires COCOMs to update force requests. Changes to force requests necessitate a complete re-analysis of the impacts, resources and commitments to meet the mission requirements. This is often not a fast process. 4. Most forces deploying are trained and ready to accomplish the mission and arrive on time. 5. The planning capacity to determine realistic sourcing recommendations for a contingency plan exceeds available capacity and competes with staffing requirements for ongoing operations. Therefore, contingency sourcing is not fast. 6. COCOMs have limited ability to accurately determine feasible preferred forces due to lack of visibility of the force pool and force pool alignment.
Simplicity	1	2	3	4		1. Force pool structure and alignment is not easily understood. 2. Because the GFM process is not well understood and documented, the ability to articulate and understand risks is also not well understood. 3. Determining risks of sourcing solutions is done on a case-by-case basis. Consistency is lacking, thus risk of competing options are not easily comparable. 4. Individual stand-alone tools are currently in use. Each requires training and experience to manipulate and extract meaningful information from the available data. This is not a simple process.
Security	1	3	4	5		1/3. The staffing of some solutions occurs on unsecure systems. 4/5. The compilation of information on unsecure systems could increase risk.
Quality	5					5. Force provider and operational risks to the supported COCOM are considered; however, the opportunity costs to other operations is not considered. The same force is often apportioned to many CCDRs for different plans. Current GFM allocation guidance articulates the risks only to the providing CCDR and service and the supported (requesting) CCDR. The risks to other CCDR plans are not accounted for. Furthermore, lack of visibility of a common force pool structure and alignment impairs the ability to determine complete and accurate risks.

1621
1622

1623

1624

1625 Capabilities: Shape and Align the Force Pool, Globally Source and Deploy Joint Forces, Assess the Impact and Risk of Proposed Changes to the Force Pool

Table D-7-10 Review Sourcing Solutions

Foresight	6	8	11				6. COCOMs lack the ability to accurately predict sourcing feasibility for preferred forces. 8. The lack of a common force pool structure and alignment impairs the ability to predict and anticipate the risk of potential options. 11. Inability to understand the risks delays the decisions and the follow-on deployment orders, decreasing foresight of the deploying units.
Simplicity	2	3	4				2. While there are defined risk metrics for operational and force provider risks, the data to support these metrics is inconsistent across the force and the articulated risks not easily comparable. 3. The training for the people determining the risks is inconsistent and the processes are not adequately documented, requiring leaders to constantly be in the training mode providing guidance on real time and/or near real time. 4. Individual stand-alone tools are currently in use. Each requires training and experience to manipulate and extract meaningful information from the available data. Interpreting the risk information is not simple.

Table D-7-12 Direct Execution of Sourcing Solution

1635 Capabilities: Shape and Align the Force Pool, Provide Visibility of the Global Availability and Operational Readiness of the Force Pool, Globally Source and Deploy Joint Forces

Accessibility	2						2. While the assignment and apportionment tables and the allocation and deployment orders (GFMAP) are accessible on secure systems, not all commands have access to secure systems. Furthermore, these documents do not provide visibility to the unit level and below. There is much room for interpretation (correct and incorrect).
Simplicity	2	3	4				2 The inconsistent documentation of the GFM processes in doctrine and standing guidance and the resultant lack of training end up with people that have access to the documents, but not having the training to be able to understand deployment orders. 3. Leadership must stay engaged to meet minimum mission requirements of fielding trained and ready forces. 4. There is limited understanding of the information required by different stakeholders at different times in the deployment process, thus even when data and information is shared, the context is missed.
Quality	4	5					4. The lack of a common force structure and its alignment causes confusion with the assignment and apportionment tables and the allocation GFMAP that do not provide the unit sourcing. 5. Risks that are determined after the sourcing decisions are made are difficult to get to decision makers in time to avoid reclaims. These risks are a norm because services do not begin forming and tailoring units until after the allocation is ordered.
Security	1	3	5				1/3. Much information on force sourcing can be found on unsecure systems such as unsecure phone calls, NIPRNET or other unclassified systems. The compilation of force sourcing and deployment information available on unsecure systems could be a risk. 5. Although room for improvement, allocation orders (GFMAP), Assignment and apportionment tables are maintained on secure systems (SIPRNET). Some service orders to units and individuals are on non-secure systems.

1639
1640

Table D-7-13 Provide Feedback into Force Development Process

Capabilities: Shape and Align the Force Pool, Globally Source and Deploy Joint Forces, Assess the Impact and Risk of Proposed Changes to the Force Pool

Quality	5	6					5. Because total demand on the force pool remains undefined, it is difficult to articulate the risk of sourcing or not sourcing a given demand as well as articulating the delta between supply and demand on the force pool at a given risk. 6. Lack of common visibility of the force pool structure and alignment makes feedback analysis difficult.
Foresight	3	8	10				3/8. Because total demand on the force pool remains undefined (and the defined requirements are always in flux), it is difficult to articulate the risk of sourcing or not sourcing a given demand as well as articulating the delta between supply and demand on the force pool at a given risk. 10. The budget process occurs separately and requires a longer lead-time than the allocation process, thus allocation decisions and implications do not impact the current POM cycle inputs. While rotational requirements are identified earlier than previous years, the service POM inputs are still due before the rotational allocation sourcing recommendations and decisions are complete. The emergent allocation process, however, occurs after the budget process, thus emergent allocation decisions and implications impact the budget after it has been submitted and approved.
Agility	3	7					3. Tailoring (training and resourcing) units to deploy within their core METLs requires detailed planning. Forming ad-hoc and ILO units is even more complex and is not fast. Units sourced with non-standard methods usually take longer to prepare for deployment. 7. AP Roadmap II has a goal of every 6 months for updates to contingency plans. Among the potential changes that would drive and update is the availability of forces. Since it takes nearly that long to reach an allocation decision for the rotational forces, a 6 month goal may not be achievable.

1641
1642

1643
1644
1645

Table D-7-14 Form and/or Resource Unit

Capabilities: Shape and Align the Force Pool, Provide Visibility of the Global Availability and Operational Readiness of the Force Pool, Globally Source and Deploy Joint Forces

Agility	3	4					3. Tailoring (training and resourcing) units to deploy within their core METLs requires detailed planning. Forming ad-hoc and ILO units is even more complex and is not fast. Units sourced with non-standard methods usually take longer to prepare for deployment 4. The majority of deploying forces are on time, trained and ready to perform the mission.
Quality	2	4	5				2. As conditions change, force requests change. These changes require changes to the unit's deployment preparations. The more accurate the initial force request is, the better the unit can be prepared. 4. While the FTN and eJMAPS line numbers allow the requirement to be tracked through the deployment process, there is still room for improvement in the discipline of using these numbers in all orders. 5. Risks that are determined after the sourcing decisions are made are difficult to get to decision makers in time to avoid reclamas. These risks are a norm because services do not begin forming and tailoring units until after the allocation is ordered.
Foresight	1	2	7	10	11		1/11. Services do not begin resourcing units for emergent requirements or contentious solutions until the allocation decision. Therefore some of the detailed timelines may need to be adjusted. COCOMs, on the other hand, make changes to their force requests necessitating other changes. The dynamic nature of the system makes producing a deployment order that will not have to be modified as assumptions are validated and conditions change very challenging. These adjustments hinder the foresight of other stakeholders. 2. The dynamic nature of preparing forces to deploy makes anticipating the changes difficult. Force visibility does not provide the accuracy and predictability to get to unit (or name) level detail. 7. Force structure is determined in the POM process. Force demand is determined later. The established force pool must be tailored to respond to real events. Current demand on the force pool allows limited response to some force requests. 10. Since the force requests are defined after the force structure is already budgeted, the feedback into the budgeting process needs to occur and a separate risk analysis of opportunity costs of funding. 11. Changes to COCOM demands, and the changes that occur in preparing forces to deploy will always require adjustments; however, there is still room for improvement. The further out COCOMs have to project their force requirements, the less accurate they will be, and the more changes should be anticipated later in the deployment process.

1646
1647

1648
1649

Table D-7-15 Monitor and Report Readiness

1650 Capabilities: Provide Visibility of the Global Availability and Operational Readiness of the Force Pool, Globally Source and Deploy Joint Forces

Quality	6						6. Various systems provide force pool visibility. Each system is tailored for its own particular uses and requires an understanding of the context of the data to come to an accurate assessment. The context of the data is often misunderstood.
Accessibility	4						4. Not all involved stakeholders know where to find the authoritative data. A common data source is not available. There are various ways each force provider/service gather their force structure and alignment data that require analysis to understand them in context.
Foresight	2	11					2. Determining the unit that is going to perform the mission is difficult because the base orders (assignment and apportionment tables and the GFMAP) do not specify to unit level. Determining the readiness and deployment preparations of the unit that is tasked to meet the mission also requires analysis. The data to track is not easily accessible. 11. As things change, (additional requirements are tasked, force requests change) the deployment schedules necessarily change to best use the available forces. These changes complicate predictability.

1651
1652

1653
1654
1655

Table D-7-16 Balance and Regulate Force Flow Based on Movement and Joint Reception, Staging, Onward Movement and Integration (JRSOI) Capacity

Capabilities: Shape and Align the Force Pool, Provide Visibility of the Global Availability and Operational Readiness of the Force Pool, Globally Source and Deploy Joint Forces

Accessibility	3	4					3. Force demands that, if sourced, will impact the transportation capacity are not visible to TRANSCOM early in the planning process. TRANSCOM's expertise in determining transportation feasibility is not always leveraged during the planning process. Some sourcing recommendations are made using force availability as the determining factor and do not take into account transportation feasibility. 4. As forces prepare for deployment, the readiness of the unit is a key indicator to whether they will meet their planned deployment timeline and be ready to be transported. Readiness information also contains a key piece of information about the amount of equipment the unit will deploy with that is key to balancing the force flow.
Agility	4						4. The process to balance the force flow is transparent and COCOMs get a voice in setting transportation priorities within the transportation capacity. Although there is room for improvement in incorporating transportation feasibility into the deployment planning decision processes (allocation and assignment)
Quality	4	5	6				4. Transportation priorities, once established per JOPES procedures are clear. The TPFDD flow is transparent and coordinated in a common system with adequate guidance. 5. The transportation feasibility is often not considered in allocation decisions that lead to deployment orders. This results in changes to deployment timelines impacting both unit preparations and COCOM employment plans. 6. The home location of the available unit recommended to meet a COCOM requirement has a significant impact on the transportation feasibility, but little impact on the availability of the unit under current guidance.

1656
1657

Table D-7-17 Track and Report Force Deployments and Redeployments

Capabilities: Provide Visibility of the Global Availability and Operational Readiness of the Force Pool, Globally Source and Deploy Joint Forces

Accessibility	4						4. The various tools that track force structure and readiness are not easily accessible in a user friendly environment that has data in a common context.
Foresight	1	2	11				1. Since force preparations and the readiness to deploy impact deployment schedules and timelines, relevant, timely readiness and deployment preparation information needs to be relayed to the COCOMs and other stakeholders to they can anticipate and mitigate any delays or shortfalls that arise later. The readiness information is captured in various tools, in different context and requires analysis to understand. 2. The actual unit tasked to deploy to meet a mission is not visible in JOPES until the ULN is populated. COCOMs need more foresight than that. The unit deploying may not be identified before that. 11. As conditions change, and unit deployment preparations occur, changes occur. These necessary changes can be disruptive to other stakeholders and have to be transparent. There is also the incorrect perception that sourcing a particular unit is vital to mission accomplishment. This runs contrary to the GFMIG guidance of sourcing the best available unit.
Quality	6						6. Data needs to be understood in the context it was gathered. Since there are various tools and processes to monitor force readiness, each needs to be understood and analyzed. This requires people trained on each tool and process that understand these intricacies. That does not always happen.

1666
1667

Table D-7-18 Assign Tasks/Mission to Units

Capabilities: Provide Visibility of the Global Availability and Operational Readiness of the Force Pool, Globally Source and Deploy Joint Forces

Agility	3	6					3. With the large number of units sourced ad-hoc and ILO, COCOMs have limited ability to re-mission units because they may not be trained and equipped to the METs a standard unit would be. 6. With the large number of ad-hoc and ILO units, COCOMs must assess the unit's ability to perform the specified mission, and carefully assess the unit's capabilities before assigning any additional non-specified missions.
Accessibility	1	2	4				1. With ad-hoc sourcing, the manpower to create these units comes from standing units. 2/4. By creating ad-hoc units, other units' manning is decremented. COCOMs do not have visibility of the unit's manning that they are deploying with. 4. COCOMs do not have visibility of the details of units preparation and resourcing (manning, training and equipping). This lack of detail impedes the COCOM's ability to ensure the planned missions for the units are within their capabilities.
Foresight	2						2. COCOMs do not have visibility of the actual unit sourced. The GFMAP does not specify the unit, it specifies the force provider. The unit is not visible until the force provider populates the ULN later in the process.

1668

1669

Table D-7-19 Sustain Forces

1670 Capabilities: Globally Source and Deploy Joint Forces

Foresight	2	7	10				2. Services know the unit deploying and have the foresight to align resources to sustain the unit. 7. The force providers and services provide sustainment for deployed units and have been responsive to resource deployed units. 10. As missions change, services have limited ability to project changes in the required sustainment.
Quality	5	6					5. As deployed units missions change, COCOMs need to inform the services of the required changes. Services and JFPs need to assess the units' ability to perform the new missions and adjust the sustaining resources to the units to best enable them to perform the new missions. These changing missions have been a source of friction between the COCOMs and force providers. 6. Due to the various systems to track the force pool and readiness, the misunderstandings have created excessive workload clarifying the readiness and capabilities of deploying and deployed units.

1671

1672

1673

1674 **Section 8 – Task – Attribute Analysis**

1675 The purpose and intent of the task and gap analysis was to conduct an evaluation of task sufficiency as evaluated against an attribute/standard pairing. The input into this step was the
1676 task/attribute/standard evaluation, captured in Appendix D, Section 7. The output of this analysis is a quantitative analysis framework used within the overall gap and redundancy analysis to draw
1677 objective conclusions about the tasks, attributes, and gaps.

1678 The first step was to assign values to the red/yellow/green data provided by subject matter experts (SME). The values of 0.0, 0.7, and 1.0 were assigned to the three colors, respectively. These
1679 values were chosen to emphasize the areas where lack of capability was perceived and to quantify the subjective evaluation criteria utilized by Global Force Management (GFM) SMEs during
1680 their validation and verification of the tables in Appendix D, Section 7. The evaluation criteria were:

- 1681 • **Green:** Task executed today at an acceptable level when evaluated against the specified standard
1682 • **Yellow:** Task executed today but at an unacceptable level or with unacceptable cost when evaluated against the specified standard
1683 • **Red:** Task not executed today or executed at an unacceptable standard

1684 Table D-8-1 below captures the results of scoring of the tasks. For example, the task “Develop Force Lists for Concept Courses of Action (COA)” had four of the six attributes mapped to the task
1685 (Accessibility, Agility, Simplicity, and Security). The attribute column of D-8-1 indicates these attributes. This task related to three of the metrics associated with Accessibility. These three metrics
1686 received the SMEs’ evaluation of red, yellow, and yellow and were, therefore, assigned the values of 0.0, 0.7, and 0.7. The far right column of D-8-1 is a straight average of all applicable metrics
1687 for each attribute under each task. In this example, the straight average for Accessibility under this task was .47. These scores indicate how well the attribute of the task is currently being met. The
1688 “Task Score” in the second column of D-8-1 is a straight average of all attribute scores applicable to that task. Underlying this calculation is the assumption that each attribute is weighted equally.
1689 In this example, the four values for Accessibility, Agility, Simplicity, and Security were averaged, yielding a score of 0.56 for this task.

1690

Section 9 – Gap Linkage Analysis

The hierarchical list in Table D-8-2 contributed to task prioritization and corresponding need for improvement based on the associated scores. Table D-8-2 does not, however, establish a relationship between the defined tasks and capability gaps previously identified. Table D-9-1 shows the relationship between the tasks and capability gaps (listed in numerical order in far left column) by applying the associated task scores, where appropriate. Blank cells indicate the specific task was not applicable to the capability gap in question.

PRIORITY	TIER 1 & TIER 2 JCAS	DESCRIPTION		METRICS	MINIMUM VALUE
			Quality	Ability to understand future priority and availability of forces in the force pool (and, therefore, tailor plan force lists to better use available forces).	High degree of certainty (0-6 months) Moderate degree of certainty (7-24 months)
				Ability to define, understand, and use force pool data (including readiness) in context	Support development and maintenance cycles for OPORD and associated products: Crisis Action Planning: <24 hours Contingency Planning: <30 days
				Clarity and relevance of strategic and sourcing guidance	Support development and maintenance cycles for OPORD and associated products: Crisis Action Planning: <24 hours Contingency Planning: <30 days
				Completeness and accuracy of force requests	Support development and maintenance cycles for OPORD and associated products: Crisis Action Planning: <24 hours Contingency Planning: <30 days
				Feasibility of force sourcing options can be determined accurately.	Changes to current force pool data/information are visible globally NRT
				Risks associated with sourcing options, recommendations, decisions, tasking and changes to force pool structure and alignment are accurate and complete.	Impacts of force allocation decision to all COCOMs and Services understood in <24 hours
				Tasking guidance (orders) and force alignment is clear and executable.	Support development and maintenance cycles for OPORD and associated products: Crisis Action Planning: <24 hours Contingency Planning: <30 days
			Security	Force requests, force pool and force pool alignment is maintained safe from enemy exploitation.	Secure information maintained on secure networks
				Force requirements, deployment orders and enabling capabilities are safe from enemy counter command and control (C2) influences or acts.	There is no compromise of classified information or information that impairs operational effectiveness
				No compromise of information that impairs operations	There is no compromise of classified information or information that impairs operational effectiveness

UNCLASSIFIED

UNCLASSIFIED

PRIORITY	TIER 1 & TIER 2 JCAS	DESCRIPTION		METRICS	MINIMUM VALUE
				Strategic guidance is maintained safe from enemy and potential enemy exploitation	There is no compromise of classified information or information that impairs operational effectiveness
				US force capabilities and limitations are safe from enemy exploitation.	There is no compromise of classified information or information that impairs operational effectiveness
			Simplicity	GFM decisions rely on common functional processes known/understood by all.	Planners have requisite training and education
				Operations can be executed from tactics, techniques, and procedures (TTP) without real time or near-real time guidance.	Planning and execution TTPs are free of conflicting guidance.
				The tools developed to align and provide visibility of the complex force pool are focused on the needs of the consumer, avoiding unnecessary data overload.	Force pool data can be filtered and queried (exported) to each and every individual data field.
				Transparency and ease of understanding of force pool information	Training allows action officers to understand presentation of force pool information with 1 week on the job training. Depiction of force pool can be understood within 10 minutes
1	Force Support - Force Mgt - Force Preparation - Human Capital Mgt Command and Control - Organize - Understand - Planning - Decide - Direct - Monitor	Shape and Align the Force Pool	Accessibility	All involved commands and organizations can access common, authoritative current alignment (and context) of DOD force structure.	Historical (6 years past), Current (near real time), future (3 year projection).
				All involved commands and organizations can access common, authoritative force demands (historical, current, future).	Historical (6 years past), Current (real time), future (3 year projection).
				All involved commands and organizations can access common, authoritative force readiness information (historical, current, and future).	Historical (6 years past), Current (within 1 week), future (3 year projection).
			Agility	Ability to adjust sourcing solutions based on changing circumstances	Adjust sourcing solutions between competing FTNs within a week.
				Ability to deploy trained and ready forces in time to meet the operational need(s)	Support development and maintenance cycles for OPORD and associated products: Crisis Action Planning: <24 hours Contingency Planning: < 6 months

UNCLASSIFIED

UNCLASSIFIED

PRIORITY	TIER 1 & TIER 2 JCAS	DESCRIPTION		METRICS	MINIMUM VALUE
	Logistics - Deploy & Distribute Net-Centric - Enterprise Services - Information Assurance Building Partnerships - Communicate - Shape Corporate Mgt & Support - Strategy & Assessment - Information Mgt			Ability to quickly assess force availability and readiness to determine plan feasibility	Determine preferred forces less than 1 hours and contingency source 1 week
				Ability to quickly tailor the force pool, or deploying forces to meet operational needs	Changes to force pool data/information are visible globally NRT of input
				Ability to quickly update force guidance for development and employment of the force based on changes to force alignment	Support development and maintenance cycles for OPORD and associated products: Crisis Action Planning: <24 hours Contingency Planning: < 6 months
			Foresight	Ability to accurately predict force requirements and alignment in time to resource the Services to produce those forces.	Force allocations feeds the POM/PR cycle
				Ability to anticipate deployment schedules and produce accurate deployment orders without multiple iterations	Deployment orders articulate the force ordered to deploy to the smallest deployable entity. Changes to deployment orders unnecessary unless changing circumstances change the deployment plan.
				Ability to anticipate force demands and alignment in time to give predictable deployment schedules to units and their soldiers, sailors, airmen, Marines, and civilians.	High degree of certainty (0-6 months) Moderate degree of certainty (7-24 months)
				Ability to anticipate impact to force pool of pursuing a military option to a national priority	Impacts of force allocation decisions to all COCOMs and Services understood in <30 days
				Ability to anticipate, understand, and articulate comprehensive impacts and risks of different sourcing courses of action (COA), sourcing a new or expanded operation, or handling an in lieu of (ILO) or ad-hoc sourcing option.	Impacts of force allocation decisions to all COCOMs and Services understood in <24 hours
				Ability to develop the force pool to meet anticipated Combatant Command force demand signals	High degree of certainty (0-6 months) Moderate degree of certainty (7-24 months)
				Ability to predict demand on force pool in order to and provide timely feedback to force development	High degree of certainty (0-6 months) Moderate degree of certainty (7-24 months)
				Ability to predict unit(s) deploying to meet a tasked mission	High degree of certainty (0-6 months) Moderate degree of certainty (7-24 months)

1708 **Appendix E – Capability Linkages**

1709 This appendix displays the linkage of Global Force Management (GFM) capabilities and tasks to the
1710 Universal Joint Tasks (UJT) and Joint Capability Areas (JCA).

1711 This appendix is composed of two sections. Section 1 consists of a capability, task and UJTs mapping
1712 matrix. Section 2 consists of a JCA-to-GFM task mapping matrix.

1713

UNCLASSIFIED

UNCLASSIFIED

1714 **Section 1 – Capability, Task and Universal Joint Task List (UJTL) Mapping Matrix**

1715 Table E-1-1 links the 19 Global Force Management (GFM) tasks to the Universal Joint Task List (UJTL) from the Strategic National to Tactical
1716 Action levels, as well as to the affected GFM stakeholders (Combatant Commands, Office of the Secretary of Defense [OSD], Joint Staff,
1717 Services, and joint force providers [JFPs]). There are 605 instances of UJTs mapping into the 19 GFM tasks, involving 226 unique UJTL items
1718 mapped to at least one GFM task.

1719 The UJTL mapping was cross-correlated with the Joint Capability Area Management System (JCAMS) website. The cells highlighted in green are
1720 those that were mapped to a task that are also “linked” UJTs to a JCA on the JCA-to-task mapping slide. The cells highlighted in yellow are the
1721 “linked” UJTs on the JCAMS site the study team determined did not fall into the GFM task. The study team did not map generic information
1722 technology (IT)/communication support that would enable a task since those same UJTs would then have to be mapped to every task (e.g., Provide
1723 Data Storage).

1724 The tables below show the linkage between the GFM tasks, stakeholders and the UJTL.

1729 **Section 2 – Joint Capability Area (JCA)-to-Task Mapping**

1730 Figure E-2-1 captures the analysis of the scope and complexity of the GFM enterprise which resulted in the identification of multiple applicable
1731 JCAs outside the Tier III JCA GFM. Tier I JCAs applicable to GFM include Command and Control (C2), Logistics, Net-Centric, Building
1732 Partnerships and Corporate Management and Support.

1733 While analysis of the GFM enterprise reflects Force Management Tier II capabilities map directly to the GFM tasks, the other three Force Support
1734 Tier II capabilities do not exhibit the same degree of one-to-one correspondence to GFM tasks. Force Preparation, Human Capital Management
1735 and Health Readiness have a limited mapping to GFM tasks. However, when compared against FS Tier II capabilities, the C2 Tier II capabilities
1736 of Organize, Understand, Planning, Decide, Direct, and Monitor have a much broader correlation to GFM tasks.

Appendix F - Scenario and Vignettes

This appendix contains an unclassified summary of the *Capstone Concept for Joint Operations (CCJO)* vignettes used as part of the capability analysis phase of the Global Force Management (GFM) Quick-Turn Capabilities-Based Assessment (CBA).

The study team conducted an initial assessment of the Defense Planning Scenarios (DPS) and Multi-Service Force Deployment (MSFD) data. The GFM CBA study team also evaluated the CCJO Experiment during the scenario selection process. The DPSs and the future looking *Joint Operational Environment (JOE) 2008* provided the basis for the CCJO Experiment scenarios and vignettes. The CCJO Experiment scenarios and vignettes provided participants (including the Office of the Secretary of Defense [OSD], Joint Staff, Combatant Commands, and Services) with operational context and mission focus/drivers. In light of the timeliness and level of involvement in the CCJO Experiment from across the Department of Defense (DOD), the study team decided to use the CCJO Experiment scenarios and vignettes as the operational context for the GFM CBA.

The CCJO Experiment scenarios and vignettes, focused on 2020, also provided an analytically useful timeframe. While the GFM CBA is driving towards impact and change in the 2010 to 2015 timeframe, any results and solutions from the GFM CBA must be enduring and relevant to the 2020 focus of the CCJO Experiment. Utilizing the CCJO Experiment scenarios and vignettes allowed the GFM CBA study team to frame GFM capabilities and tasks in the long-term while still identifying near-term impacts and solutions.

A challenging, plausible scenario was critical to examination of the CCJO. To ensure the scenario represented the future operating environment, two primary sources were used. The *JOE 2008* and the DPSs were used as a basis for the scenario. Elements of both sources create scenarios and vignettes providing a range of challenges to thoroughly examine conceptual sufficiency and implications for the future force. Table F-1 captures each scenario and its associated vignettes. The following three scenarios represent distinct archetypal future challenges that, together, represent the key elements of the anticipated future security environment.

- A State Competitor
- A Fragile State
- A Globally Networked Non-State Actor

Table F-1 Scenario and Vignettes

	State Competitor	Fragile State	Globally Networked Actors
Vignette 1	Deter near-peer adversary from nuclear expansion, disruption of commerce and insurgencies and support of terrorism	Foreign Internal Defense	Interdiction of external influence; suppress maritime disorder; Counter insurgency (COIN)
Vignette 2	Power projection against high-end anti-access capabilities	COIN operations	Defeat militarily competent non-state actor; cyber warfare

UNCLASSIFIED

UNCLASSIFIED

Vignette 3	Secure and maintain territory as required to ensure freedom of navigation and restoration of boundaries	COIN plus Humanitarian Assistance (HA)/Disaster Relief (DR)	Off-shore weapons of mass destruction (WMD)
-------------------	---	---	---

1769 **Global Context:** The global context for the scenario depicts a set of conditions consistent with *JOE 2008*.
1770 These conditions include threats from a state competitor, global terrorism, and areas of instability.

UNCLASSIFIED

UNCLASSIFIED

Section 1 – Environment 1

The State Competitor scenario features a regional adversary that is chemical, biological, radiological, nuclear, high explosive (CBRNE) and electro-magnetic pulse (EMP) capable; constitutes a credible long-range missile threat; has advanced anti-access capability; and has been very successful in the “battle of the narrative.” This country is driven by the desire to expand its influence in the region and to reduce Western influence. The country remains stable, in part because of growing nationalism and effective internal controls. However, the government has continually mismanaged the state’s economy, and the populace remains somewhat dissatisfied as they look to the wealth of some of their regional neighbors.

Building on its growing nationalism and recognizing the fragility and tentativeness of regional actors and a global and regional drawdown of Western military forces, the state has become increasingly belligerent and now threatens freedom of navigation within the region. It has also threatened neighboring states with military action, including potential nuclear attack. The state competitor will act through surrogates, such as the regional and extra-regional extremist groups it already supports. In an attempt to destabilize regional governments, it has also begun supporting insurgencies and carrying out non-attributable sabotage attacks against energy and transportation infrastructure in other regional states. If a conflict occurs, it will likely cause destabilization in the region, restriction of navigation, and major disruptions in the flow of commerce with global impact.

F.1.1 Scenario Environment 1: Vignette 1

F.1.1.1 Situation Update

- Major regional power attempted to expand its influence and control by force and intimidation in the region.
- Regional governments were threatened by major adversary who:
 - Stepped up procurement of anti-ship missiles
 - Deployed its air, sea, and ground anti-access capabilities
 - Militarized the regional sea lanes and conducted maritime intercept operations and selectively disrupted seaborne commerce
 - Threatened further restrictions and disruptions
 - Initiated a campaign of destruction of key petroleum distribution infrastructure and shipping and distribution facilities in neighboring countries
 - Conducted an Information Operations (IO) campaign to pressure regional governments to keep US bases closed and force US military forces out of the region
 - Stepped up support to terrorist organizations operating regionally and internationally
 - Deployed major ground forces into their littoral area

F.1.1.2 Blue Challenges

- Identify and assess capabilities required to project power in an austere theaters of operation that offer significant air, land, sea, and space challenges
- Deploying and sustaining forces over long distances, regionally and globally
- Maintaining the coherence and effectiveness of regional governments facing terrorist attacks and externally-supported insurgency
- Dissuading adversary from restricting navigation, expanding nuclear capability, and supporting regional insurgencies, using a synergistic application of diplomatic, informational, military, and economic (DIME) elements of power

F.1.1.3 Blue Mission

- Deploy joint/combined air/land/sea forces required for deterrence.

UNCLASSIFIED

UNCLASSIFIED

- 1815 • Isolate the aggressor nation politically and economically.
- 1816 • Develop and conduct a comprehensive, integrated IO campaign.
- 1817 • Increase security assistance force support to regional countries currently being threatened by
- 1818 adversary-supported insurgencies.

1819 **F.1.1.4 Red Mission**

- 1820 • Reduce regional support for Blue activities.
- 1821 • Deter the Blue alliance from intervening in the region.
- 1822 • While avoid armed conflict with the Blue alliance, increase harassment of maritime activities in
- 1823 neighboring waters.
- 1824 • Increase regional terrorist activities and support to regional insurgencies.
- 1825 • Conduct a sophisticated IO campaign to divide the Blue alliance.

1826 **F.1.2 Scenario Environment 1: Vignette 2**

1827 **F.1.2.1 Situation Update**

- 1828 • Adversary intensified anti-access operations and stopped freedom of navigation into and out of
- 1829 neighboring waters.
- 1830 • Threatened conventional and nuclear missile attacks against allies and regional countries providing
- 1831 support to Blue
- 1832 • Terrorist incidents directed at US personnel in the region increased.
- 1833 • Blue initiated diplomatic efforts to expand the coalition, to gain greater access and overflight rights
- 1834 within the region, and to reassure allies and regional partners.
- 1835 • US President ordered deployment of US forces to the region.
- 1836 • Blue deployed additional intelligence, surveillance and reconnaissance (ISR) and special operations
- 1837 forces (SOF) assets to locate adversary weapons of mass destruction (WMD).

1838 **F.1.2.2 Blue Challenges**

- 1839 • Projecting power and conducting operations against a sophisticated adversary with a broad range of
- 1840 modern, advanced military weapons
- 1841 • Conducting joint/combined air/space/land/sea and special operations under forced entry conditions in
- 1842 a high-threat environment
- 1843 • Establishing, defending, and re-supplying air and beach heads under hostile conditions
- 1844 • Conducting joint, combined, and interagency operations in a high threat CBRNE, cyber, missile and
- 1845 space environment
- 1846 • Responding to and overcoming adversary use of CBRNE weapons, electronic warfare, and cyber
- 1847 warfare (computer network attack/operations).
- 1848 • Limiting vertical and horizontal escalation
- 1849 • Eliminating the threat of nuclear weapons

1850 **F.1.2.3 Blue Mission**

- 1851 • Prohibit adversary use of nuclear weapons
- 1852 • Restore and maintain freedom of navigation
- 1853 • Restore territorial integrity of any nations invaded by the adversary

1854 **F.1.2.4 Red Mission**

- 1855 • Conduct air, land and sea operations to maintain restrictions on navigation and deny Blue alliance
- 1856 access to the maritime area of interest.
- 1857 • Prevent a Blue invasion.

UNCLASSIFIED

UNCLASSIFIED

- Develop diversions to prevent Blue efforts to open restricted waters or invade the homeland.
- Pressure regional states to join the fight against the Blue alliance.
- Interdict Blue alliance lines of communications.
- Limit the escalation of the conflict to the achievement of specified goals.

F.1.3 Scenario Environment 1: Vignette 3

F.1.3.1 Situation Update

- Blue re-established freedom of navigation and ejected Red from any occupied territories.
- Blue located and destroyed adversary WMD capability.
- Adversary conducted torpedo, missile and swarm attacks against Blue warships, sinking one and damaging three.
- Adversary called for regional and international support for its campaign to “protect its homeland.”

F.1.3.2 Blue Challenges

- Conducting combat operations against a near-peer competitor in limited areas of his homeland
- Planning and implementing stability operations in regional states that have ongoing, externally supported insurgencies and lack capabilities to provide for the needs of their populations
- Winning the IO battle
- Preparing to employ DIME elements of power in a synergistic manner to restore effective governance and provide reconstructive aid
- Deploying and sustaining follow-on forces in the face of threats to lines of communication

F.1.3.3 Blue Mission

- Secure, expand, and defend territory necessary to ensure continued freedom of navigation.
- Conduct Security, Stability, Transition, and Reconstruction Operations (SSTRO) concurrently with offensive operations in the region.
- Conduct Counter insurgency (COIN) as necessary to reduce instability in the region.

F.1.3.4 Red Mission

- Defend the Red homeland.
- Air, land, and sea forces attack and destroy Blue alliance air and beach heads; defeat expanding Blue ground forces.
- Internal security forces conduct vigorous campaign to detect and eliminate any internal partisan threats.
- Conduct IO to increase regional support for Red “protection of its homeland.”

UNCLASSIFIED

Section 2 – Environment 2

The Fragile State scenario features a host nation that suffers from a post-colonial history: a weak government, which has been unable to establish accountable governance and a rule of law that was once inherent in tribal structures. The problems in the host nation are exacerbated by a combination of unsustainable demographics (rapidly growing youth bulge, disease, and urbanization), ethnic strife inflamed by external radical influences, and transnational crime and corruption, sustained by an economy reliant on a single resource. The host nation is rapidly destabilizing under the twin impacts of sectarian violence, which is supported by external actors with global links and a tribal-based insurgency. In one region of the state, an umbrella insurgent group has formed to bring a sense of organization and structure to multiple groups. This organization credibly represents the grievances of the local population against government corruption and perceived mismanagement. These insurgents have modernized and are utilizing transnational criminal organizations (TCO) to increase their weapon caches. In the other region, religious extremists intend to create a separate religious state out of a portion of the country free from Western influence, with a long-term vision to envelope the entire country. The group has increased in numbers and now has international assistance from outside religious extremists.

The national government has been ineffective in managing the situation primarily due to rampant government corruption and a poorly trained and equipped military. Conditions exacerbating this include a multi-cultural, multi-lingual population, xenophobia, resource exploitation, environmental degradation, corruption, ethnic violence, intra-state conflict, infectious disease, corruption, and transnational influences such as terrorism, crime, and migration. The host nation government implements its responsibility through protection of vital use areas that serve the needs of the state, frequently at the expense of providing for and meeting the needs of the populace. This has provided the space for the development of alternate providers of human security to fill the void left in areas deemed non-vital to the state. The increasing reliance on TCOs, violent extremist organizations (VEO), shadow governments, and externally supported militias, as well as other non-governmental and inter-governmental organizations (NGO/IGO) highlights the government's inability to provide for the needs of its populace and further erodes the legitimacy of state institutions.

The host government has requested US and coalition assistance to regain legitimacy lost, due to corruption, incompetence, and indifference to human suffering, and to restore stability to the country. If the situation is allowed to further deteriorate, it will affect the global economy and cause increased regional instability.

F.2.1 Scenario Environment 2: Vignette 1

F.2.1.1 Situation Overview

- The host government is faltering.
- Shutdown of the energy section and its revenues have forced the host government to cut revenue sharing and subsidies to state and local governments.
- The diminution of services provided by state and local governments has provoked widespread demonstrations throughout the nation.
- Most host nation security forces have withdrawn into heavily fortified base camps.
- Increase in number and severity of clashes between the southern insurgents and private security companies (PSC) hired by the multinational corporations
- Foreign extremists have infiltrated the country and launched attacks.
- Government forces responding to the attacks often look the other way or assist the extremists.
- State and local governments respond passively to the terrorists' presence because of sympathy or fear of becoming the next target.

UNCLASSIFIED

UNCLASSIFIED

- 1935 • The host government has invited the US and coalition partners to train and equip its security forces to:
- 1936 ○ Defeat the insurgent/criminal organizations in the south
- 1937 ○ Suppress increasing sectarian violence in the north, which has visible links to transnational
- 1938 terrorist organizations

1939 **F.2.1.2 Blue Challenges**

- 1940 • Must plan and execute a joint/combined/interagency ISR plan to provide the necessary geospatial
- 1941 intelligence (GEOINT) and “human terrain” capabilities required to:
- 1942 ○ Identify and target terrorist groups
- 1943 ○ Identify and target insurgent/criminal groups
- 1944 ○ Effectively train and equip host nation forces during an ongoing insurgency
- 1945 ○ Support humanitarian relief operations in a multicultural environment
- 1946 • By, with, and through the host government, the US and coalition partners must conduct
- 1947 joint/combined special operations to retake and secure host nation energy installations and
- 1948 infrastructure held by insurgent/criminal organizations and restore them to the host government.
- 1949 • Develop and execute a comprehensive, coordinated, joint/combined/ interagency IO plan to win the
- 1950 “battle of the narratives.”

1951 **F.2.1.3 Blue Mission**

- 1952 • Conduct joint/combined/interagency operations to assist the host nation to regain control of the
- 1953 energy sector.
- 1954 • Assist in the restoration of the host nation’s authority in the southern region.
- 1955 • Assist the host nation in reducing sectarian violence in the northern region and reestablishing state
- 1956 control in the face of armed resistance.
- 1957 • Assist host nation, international organizations and NGOs in meeting the immediate humanitarian
- 1958 needs of the population suffering from violence and government collapse.
- 1959 • Assist the host nation in planning and implementation of a government reform program that will
- 1960 address the corruption that depletes the national wealth and reduces government legitimacy.

1961 **F.2.1.4 Red Mission**

- 1962 • Southern insurgents
- 1963 ○ Retain control of the region and its adjacent maritime space.
- 1964 ○ Firmly establish a “shadow government.”
- 1965 ○ Expand political control of state and local governments.
- 1966 ○ Maximize profits from criminal activities.
- 1967 • Northern insurgents
- 1968 ○ Expand control over the state and local governments.
- 1969 ○ Establish and secure training camps, forward operating basis, and supply lines.
- 1970 ○ Eliminate non-fundamentalist relief operations in the northern region.

1971 **F.2.2 Scenario Environment 2: Vignette 2**

1972 **F.2.2.1 Situation Overview**

- 1973 • The US-assisted host nation efforts to defeat the insurgent/criminal organization in the south are
- 1974 ineffective
- 1975 • Southern insurgent forces:
- 1976 ○ Have established a shadow government
- 1977 ○ Effectively control the on-shore energy sector
- 1978 ○ Have bought the loyalty of the local people by providing food and shelter

UNCLASSIFIED

UNCLASSIFIED

- 1979
 - Are rapidly expanding and equipping the ethnic militias with modern weapons
- 1980
 - Have acquired, through TCOs sophisticated weapons, including EMP graphite bombs, advanced antitank guided missiles, and directed energy weapons
- 1981
- 1982
 - Northern insurgent forces:
- 1983
 - No change

1984 **F.2.2.2 Blue Challenges**

- 1985
 - By, with, and through the host nation, the US and coalition partners must conduct joint/combined/interagency COIN operations in a complex human and geographical environment.
- 1986
- 1987
 - Must intensify foreign internal defense (FID) training during an ongoing insurgency
- 1988
 - Plan and conduct joint/combined/interagency air, land, sea and special operations to interdict drugs, weapons, and materiel flows from external sources in coordination with the host nation and other national and international agencies.
- 1989
- 1990
- 1991
 - Conduct joint/combined SOF direct action operations against insurgent targets with sophisticated weapons.
- 1992
- 1993
 - Operate in an environment threatened by an E-bomb.

1994 **F.2.2.3 Blue Mission**

- 1995
 - Conduct joint/combined/interagency COIN operations in a complex human and geographical environment.
- 1996
- 1997
 - Intensify FID training.
- 1998
 - Conduct combined/interagency air, land, sea and special operations to interdict drugs, weapons, and materiel flows from external sources.
- 1999
- 2000
 - Develop and execute with host nation, coalition partners, international organizations, and NGOs an overall National Development Plan centered on government reform and humanitarian assistance.
- 2001
- 2002
- 2003
 - Conduct a comprehensive IO campaign.

2004 **F.2.2.4 Red Mission**

- 2005
 - Prepare for a long campaign against overwhelming Western technology and firepower.
- 2006
 - Conduct asymmetrical warfare.
- 2007
 - Win the “battle of the narratives.”

2008 **F.2.3 Scenario Environment 2: Vignette 3**

2009 **F.2.3.1 Situation Overview**

- 2010
 - The government has regained tentative control of lost territories.
- 2011
 - Major humanitarian crisis, both natural and manmade, exists.
- 2012
 - Violence in the north and south and government neglect have contributed to a crumbling infrastructure.
- 2013
- 2014
 - Residents negatively perceive the armed forces.
- 2015
 - Refugees have fled from the North and South to the slums of the capital region.
- 2016
 - Heavy rains have caused flooding, leaving thousands homeless and without food and or potable water.
- 2017
- 2018
 - Malaria, cholera, and dysentery are infecting the survivors of the flood.

2019 **F.2.3.2 Blue Challenges**

- 2020
 - Must conduct joint/combined/interagency operations with assistance from NGOs, IGOs, and host government to:
- 2021

UNCLASSIFIED

UNCLASSIFIED

- 2022 ○ Reestablish normal security throughout the country.
- 2023 ○ Provide large-scale humanitarian assistance to meet population needs for food, water, shelter, and
- 2024 medical assistance.
- 2025 ○ Assist host government's political, judicial, and security leadership to reestablish governance
- 2026 ○ Establish prioritized lists for the reconstruction efforts of key infrastructure.
- 2027 ○ Coordinate and assist the host government in the reconstruction efforts.

2028 **F.2.3.3 Blue Mission**

- 2029 • Conduct joint/combined/interagency operations to assist the host nation to meet the immediate
- 2030 humanitarian needs of its population.
- 2031 • Assist the host nation in reconstruction efforts.
- 2032 • Conduct joint/combined/interagency transition operations to train and equip civilian officials, police,
- 2033 and the military.
- 2034 ○ Intensify FID training.

2035 **F.2.3.4 Red Mission**

- 2036 • Maintain security of key cadres.
- 2037 • Begin regeneration of forces and funds.
- 2038 • Sabotage reconstruction projects.

UNCLASSIFIED

Section 3 – Environment 3

The Globally Networked Actor scenario focuses on a friendly nation in a geostrategic location that is threatened by a coordinated aggregation of insurgent/terrorist groups with global links to transnational terrorists and criminal organizations. This region represents the convergence of several major religions as well as multiple ethnicities that transcend national borders. The region is a sanctuary for insurgent/terrorist groups that are driven by religious fundamentalism and a desire to establish a religious state. They seek to dominate the region and influence neighboring states' behavior toward it and Western influences. They are also using the host country as a training ground for a core of foreign fighters for employment in conflicts around the globe. This comprises a threat of increased ideological alignment between the organizations that could create a new and more powerful threat to regional stability.

The host nation is highly fragmented, which makes it difficult for the central government to ensure control over outlying areas. Over the past decade, violence has erupted between various groups, fueled by a lack of military control, and, on occasion, by explicit encouragement from the security forces. The situation in several areas of the country has been tense as terrorist attacks have continued to divide the communities. Although the host nation government has made efforts to confront militant and criminal groups throughout the region, it has been unable to dedicate sufficient resources to be successful. The source of power of these groups has been the growing discontent of the population as members feel increasingly disenfranchised. The intricate web of family, business and social ties that they engender could allow the various local militant groups not only to survive but also adapt and regenerate, even in the most hostile circumstances. At the same time, the government has been largely ineffective at addressing the underlying discontent of large portions of the population. The host nation supports limited US and coalition involvement to improve regional security in a way that maintains geopolitical and economic stability throughout the region. However, regional governments provide mixed responses. Without outside assistance, all or portions of the host country will be controlled by forces friendly to the terrorists and the area will be a de facto terrorist state and haven for global terrorists who target the US and Western allies.

F.3.1 Scenario Environment 3: Vignette 1

F.3.1.1 Situation Overview

- Terrorists are attempting to enter the threatened region and create maritime disorder.
- The host nation, together with neighboring states, have asked the US and coalition partners for assistance in preventing an influx of foreign terrorists.
- The host nation has asked the US and coalition partners for assistance in interdicting the in-flow of resources to foreign insurgents/terrorists through piracy and other threats to sea lines of communication (SLOC).
- The host nation has requested the US and coalition partners to provide assistance in training its security forces.

F.3.1.2 Blue Challenges

- The US and coalition partners, in conjunction with the host nation and friendly neighboring states, must develop and execute a joint/combined/ interagency ISR plan to provide the GEOINT, and “human terrain” capabilities necessary for operations in a complex human and geographical environment.
- US and coalition partners, in conjunction with the host government and other friendly nations, must conduct joint/combined/interagency operations to locate, identify, and apprehend foreign terrorist/insurgents.
- US and coalition partners must detect and interdict infiltration routes.

UNCLASSIFIED

UNCLASSIFIED

- 2084 • The US and coalition partners working by, with, and through the host nation and friendly
- 2085 neighboring states and in conjunction with IGOs, must conduct joint/combined/interagency anti-
- 2086 piracy, and anti-smuggling operations.
- 2087 • These operations will be conducted in a complex, mostly maritime environment.
- 2088 • These operations must assist and ensure freedom of navigation in the surrounding vital maritime
- 2089 choke points.
- 2090 • The US and coalition partners must initiate an FID program to provide security assistance.
- 2091 training

2092 **F.3.1.3 Blue Mission**

- 2093 • At the request of friendly, regional governments, assist in preventing the land, sea and air
- 2094 reinforcement of extremists and foreign terrorists, and reinvigoration of regional insurgencies,
- 2095 transnational terrorist organizations, and transnational criminal organizations.
- 2096 • Implement strategic communication and provide surveillance, detection and tracking of threats to
- 2097 counter the extremists.
- 2098 • Provide force protection, situational awareness, and security information to interagency and
- 2099 coalition partners.
- 2100 • Provide security assistance training and equipping of host nation security forces.
- 2101 • Provide indirect support of national COIN operations (including ISR).

2102 **F.3.1.4 Red Mission**

- 2103 • Reinforce success and strengthen the insurgent organizations throughout the region providing
- 2104 men, materiel and funds.
- 2105 • Maintain links to transnational criminal organizations that facilitates the movement of men,
- 2106 materiel and funds.
- 2107 • Employ the global media to exploit the righteousness of Red actions and to aid in recruiting
- 2108 volunteer martyrs and trained and experienced fighters skilled in the latest military technologies.
- 2109 • Take advantage of humanitarian disasters to expand operations, to aid in recruiting and fund
- 2110 raising and to target apostates and other enemies.

2111 **F.3.2 Scenario Environment 3: Vignette 2**

2112 **F.3.2.1 Situation Overview**

- 2113 • An insurgency has taken over a major portion of the country.
- 2114 • Global sea lanes are threatened by piracy and other criminal activities.
- 2115 • A major portion of the host nation regular armed forces, with substantial guided rockets, artillery,
- 2116 missiles and mortars (G-RAMM), has defected to the terrorist-backed insurgency.
- 2117 • Insurgent forces have full control of the northwestern part of the country, establishing their own
- 2118 government and providing a base for world-wide terrorist activities.
- 2119 • The host government, together with neighboring states, has asked the US and coalition partners
- 2120 for assistance defeating the insurgency, regaining control of the north, and ejecting the foreign
- 2121 terrorists.

2122 **F.3.2.2 Blue Challenges**

- 2123 • The US and coalition partners, in conjunction with the host nation and friendly neighboring
- 2124 states, must develop and execute a joint/combined / interagency operation to reestablish host
- 2125 government control of the entire country.
- 2126 • US and coalition partners must be prepared to deal with massive G-RAMM.

UNCLASSIFIED

UNCLASSIFIED

- 2127 • US and coalition partners must be prepared to deal with electronic attack and cyber warfare
- 2128 (computer network attack/operations).
- 2129 • Providing security, recovering from the humanitarian disaster, and reestablishing government
- 2130 authority in the south remains a major problem.
- 2131 • Piracy and threats to SLOCs also remain a major issue.

2132 **F.3.2.3 Blue Mission**

- 2133 • Working by, with and through the nations of the region, conduct ISR, anti-piracy, anti-criminal,
- 2134 and anti-terrorist operations to enforce the United Nations' Convention on the Law of the Sea and
- 2135 ensure freedom of navigation
- 2136 • Working by, with and through the nations of the region to assist in defeating the insurgents, eject
- 2137 the foreign terrorists, and assist in reestablishing governance.
- 2138 • In host nation, conduct COIN to reestablish government control of the country.

2139 **F.3.2.4 Red Mission**

- 2140 • Attack US and coalition forces and their economic and commercial interests throughout the area,
- 2141 thereby forcing US and coalition forces to permanently leave the area in defeat.
- 2142 • Interdict the strategic maritime straits, attacking US and coalition forces and their supporters.

2143 **F.3.3 Scenario Environment 3: Vignette 3**

2144 **F.3.3.1 Situation Overview**

- 2145 • The globally-linked terrorist adversary has obtained most or all of the components for a nuclear
- 2146 weapon and is maintaining those components offshore, posing a direct nuclear threat to the host
- 2147 government, the US homeland, and regional partners.
- 2148 • Blue is faced with the need to establish a layered homeland defense against a WMD-armed non-
- 2149 state entity.

2150 **F.3.3.2 Blue Challenges**

- 2151 • Within the region:
 - 2152 ○ The US and coalition partners, in conjunction with other friendly nations, must locate,
 - 2153 identify, track, and secure or render ineffective WMD or WMD-related materials.
 - 2154 ○ These actions require integrated interagency and multinational strategic and operational
 - 2155 planning in support of the host nation and the region.
- 2156 • Within the homeland:
 - 2157 ○ The situation requires the full range of US homeland defense planning.
 - 2158 ○ Note: The Blue Team in Globally Networked Transnational Actor environment is composed
 - 2159 of personnel to primarily focus on the region and, thus, may not have all the capabilities
 - 2160 needed to fully examine the homeland security portion of this vignette. They can be expected
 - 2161 to provide general insights on CCJO sufficiency and force capabilities with respect to
 - 2162 homeland security missions.

2163 **F.3.3.3 Blue Mission**

- 2164 • In conjunction with other friendly nations, locate, identify, track and secure or render ineffective
- 2165 WMD or WMD related materials.
- 2166 • These actions must be effective in politically sensitive, denied and hostile environments and
- 2167 include overcoming countermeasures of deception, cover, and concealment
- 2168 • Within the region:

UNCLASSIFIED

UNCLASSIFIED

- 2169 ○ Hardening of key locations
- 2170 ○ These actions require an integrated interagency and multinational strategic and operational
- 2171 planning and response.
- 2172 • Within the homeland:
- 2173 ○ Determine requirements for the full range of US homeland defense measures.

2174 **F.3.3.4 Red Mission**

- 2175 • Intensify efforts to acquire critical components to complete the WMD and announce readiness to
- 2176 employ the device.
- 2177 • Evade detection by blending with local shipping operations as part of the deception, cover and
- 2178 concealment plan by delivering legitimate cargo.
- 2179 • Prevent enemies from locating, tracking or targeting Red enterprise by air, land, sea, space or
- 2180 through the cyber domain.
- 2181 • Develop an approach for attacking the US homeland.

2183 Appendix G – Concept Mapping and Literature Research

2184 This appendix contains the results of the document research phase of the Global Force Management
2185 (GFM) Quick-Turn Capabilities-Based Assessment (CBA). The document research phase assisted in the
2186 development of the military problem as well as definition of the scope and overall concept of the GFM
2187 Quick-Turn CBA. This section is comprised of two sections:

- 2188 • **Section 1 – Concept Mapping:** The concept mapping depicts how GFM complements the future
2189 vision of the joint warfighting force through an analysis of the *Capstone Concept for Joint*
2190 *Operations (CCJO)*, *Joint Functional Concepts (JFC)*, *Joint Operating Concepts (JOC)*, *Joint*
2191 *Integrating Concepts (JIC)*, and other concepts.
2192
- 2193 • **Section 2 – GFM CBA Literature Research:** The team reviewed current doctrine, policy and
2194 other sources to identify any key areas for analysis. This review was primarily intended to
2195 identify the existence of any doctrine, policy, or documents containing GFM material.

2196

2197

UNCLASSIFIED

UNCLASSIFIED

Section 1 – Concept Mapping

Table G-1-1 depicts the results of the capability linkage analysis performed during the GFM Quick-Turn CBA. The purpose of this analysis was to identify how GFM complements the future vision of the joint warfighting force. This was accomplished through an analysis of the current *CCJO*, *JFCs*, *JOCs*, *JICs*, and other concepts. The output of this analysis was twofold: 1) Identify how those elements of other concepts the GFM capabilities support; 2) Identify the elements of other capabilities that support the GFM capabilities.

Section 2 – Global Force Management (GFM) CBA Literature Research

Table G-2-1 captures the results of a review of current doctrine, policy and other sources to identify any key areas for analysis during the GFM CBA. The documents considered part of the core guidance for GFM were not included in this review. This review was primarily intended to identify the existence of any doctrine, policy or documents that contain GFM material. The matrix below contains the results of this review.

The matrix contains the following:

- **Reference Document** - source of Key Area with document date.
- **Key Areas** extracted/summarized from the identified documents.
- **GFM Capability Link** - Reviewed the sources and mapped the Key Areas to the GFM CBA Capabilities
- **GFM Task Link** – Reviewed the sources and mapped the Key Areas to the GFM CBA Tasks.

Net-Enabled Command Capability (NECC) Capability Development Document (CDD) is referenced in literature research because the requirements identified in the NECC CDD remain valid. OASD (AT&L) canceled the NECC program but did not invalidate the requirements in the NECC CDD.

Table G-2-1 GFM CBA Literature Research

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
Adaptive Planning CONOPS	(U) Parallel planning efforts will “align and synchronize a wide group of functional activities (e.g., SA, Intel, Force Employment, Force Projection, Force Management, readiness, comms, logs, and security cooperation functions)” across multiple organizational levels and between COCOMS, Service component commands, JTFs and other Service echelons.	1,3	1-11
Adaptive Planning CONOPS	(U) Living plans are the construct to integrate planning with execution so planning is informed by evolving strategic understanding, ongoing operations and force availability.	1-4	4,10,13,15,17
Adaptive Planning CONOPS	AP Roadmap II calls for improvements to the GFM enterprise to balance strategic force priorities between on-going operations, including shaping activities, and contingency plans.	1,4	1-3, 13-19
Adaptive Planning CONOPS	For example, the JSCP provides a new force apportionment construct to “align apportionment with AP” and provide automated, real time sourcing tools and readiness databases.	1,3	3-5, 7, 8, 10, 11, 12
Adaptive Planning CONOPS	The near term objective of AP is to identify the capabilities needed to integrate the functional processes and tools of the force management, planning and execution communities in-stride while maintaining secure, interoperable capabilities to support current operations.	1,3,4	1-11
Adaptive Planning CONOPS	DOD working to consolidate strategic guidance documents.	2,4	3-5,7, 8, 10
Adaptive Planning CONOPS	AP efforts should: . . . , develop processes for global course of action (COA) development; mitigate operational seams and vulnerabilities, identify and mitigate seams between DOD and other USG agencies; and resolve conflicts over authorities, forces, resources, capabilities and priorities	1-4	1-11
Adaptive Planning CONOPS	As the “living plans” concept matures, select plans will be continuously updated to reflect changes in strategic guidance and context, available forces and capabilities, and to maintain multiple valid options. In the future, automatic triggers linked to authoritative data sources, planning assumptions, and key capabilities will alert planners to changes in critical plan components or operational conditions that may necessitate changes to the basic plan.	1-4	4,10,13,15,17

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
Adaptive Planning CONOPS	Planning assumptions that are continuously evaluated for their validity // Strategic and operational risk assessment based upon the availability and readiness of planned forces and resources	3,4	1-11
Adaptive Planning CONOPS	Risk Assessment. The AP initiative enhances the commander's risk assessment by further integrating force readiness and availability into the plan assessment processes.	1-4	1-3,6
Adaptive Planning CONOPS	APEX needs to provide the ability to determine future force capability requirements and strategic risk assessment balanced with current strategy, missions, and force readiness.	1-4	1,3-5
Adaptive Planning CONOPS	It should also assess logistics support force adequacy based on projected (modeled) force closure estimates and continuously monitor plans throughout their modification and implementation	2,4	1,2,6
Adaptive Planning CONOPS	In order to facilitate transportation activities, USTRANSCOM transportation planners must be included as key stakeholders in the entire planning, decision-making, and execution processes of the JPEC so that they may influence COA development, adapt to changes in the planning environment, and provide appropriately tailored transportation solutions.	1,2	1-11
Adaptive Planning CONOPS	Early and accurate transportation feasibility estimates are critical to plan development and execution. These estimates are developed only through the continuous participation of transportation planners in the plan development process.	3,4	1,2,3
Adaptive Planning CONOPS	With the signing of AP Roadmap II, USJFCOM became the AP functional sponsor tasked to gather and analyze the JPEC's functional requirements for future APEX capability development and acquisition.	3,4	3-8
Adaptive Planning CONOPS	In the long term, APEX process refinement must include development of interagency, multinational, and non-governmental collaboration and coordination processes and procedures	2,3	3,4,7
Adaptive Planning CONOPS	The APEX framework will be used to organize, schedule and develop multiple CBAs to determine the specific functional requirements for APEX process improvements.	2,3	4,5,7-9
Adaptive Planning CONOPS	To "align apportionment with AP," APEX will integrate with the GFM enterprise to provide leaders with a clear picture of global force readiness, availability, and the risks associated with their assignment. APEX will integrate several sourcing methodologies to provide CCDRs with force packages that balance capability requirements and risks with global priorities.	1-3	1-4, 6,15,17
Adaptive Planning CONOPS	APEX Operational Risk: the focus of planning has been on the force sourcing aspect, with the other related areas (logistics, intelligence, etc) having lesser emphasis // Not fully defining and integrating mission essential functions and tasks into military plans, thus impacting mission effectiveness // Competition for planning resources that reduces capabilities and adversely impacts the JFCs' ability to prioritize planning // Improperly planned and coordinated requirements	1-4	4,6-8
Adaptive Planning CONOPS	APEX Force Management Risk: APEX development and integration presents low – moderate force management risk given the pace and timing of development and fielding of APEX-integrated GFM capabilities to support the JFCs.	1,4	1-3, 13-19
Adaptive Planning CONOPS	APEX Institutional Risk: APEX development and integration presents moderate institutional risk given the current lack of a clear resource and acquisition strategy for development and implementation of major changes to the DOD's enterprise planning and execution capabilities. The lack of APEX program status and the potential loss of momentum for proposed improvements as they are subsumed into the future C2 development efforts place timely delivery of improved planning and execution capabilities for the warfighter at risk.	4	1-19

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
Adaptive Planning CONOPS	Strategic Guidance and Direction: Guidance to indicate which plans must be maintained in a living state and greater clarity for range of conditions and circumstances that would initiate updates.	2-4	4,10,13,15,17
Adaptive Planning CONOPS	Linking Plans: The ability to assess the effects/impacts of executing one OPLAN on the potential to concurrently or sequentially execute another plan.	4	4,9,13
Department of Defense Instruction 5158.05, Joint Deployment Process Owner	5.4.3. Annually conduct studies and analyses on the deployment and redeployment process improvement and provide recommendations for process improvements across the DOTMLPF spectrum.	2	
Department of Defense Instruction 5158.05, Joint Deployment Process Owner	5.4.3.3. Ensure joint deployment and redeployment processes are linked and synchronized with joint doctrine, policy, authoritative databases, fully interoperable information systems, and requisite joint deployment and redeployment process training and education, and aligned with Global Force Management processes. Present requirements bi-annually at the JDDC.	2	8, 11, 12, 15, 17, 18, 19
Hurricane Katrina Lessons Learned	Give the National Guard Bureau (NGB) a capabilities-based force provider role for National Guard forces responding to a catastrophic event	1-4	1,2,13,16
Hurricane Katrina Lessons Learned	JTF Katrina had little visibility on National Guard (NG) forces and capabilities that arrived and were employed by the respective TAGs without prior consultation or coordination. EMAC was a state-to-state process that operated outside of the normal DOD force provider processes . . . there were no NG LNOs collocated with the DCE to help coordinate force requirement requests with the active duty forces	1-4	1,14-19
Hurricane Katrina Lessons Learned	What should be done: DOD establish/codify an abbreviated Force Provider Process for NG forces // Consider giving the NGB a force provider role for NG forces when responding to a catastrophic event	2,3	1,2,13,16
Hurricane Katrina Lessons Learned	DOD should establish/codify and abbreviated force provider process for Title 10 forces during a domestic catastrophic incident.	2,3	1,2,13,16
Homeland Defense/Civil Support (HD/CS) Capabilities-Based Assessment (CBA)	C2 of Military Cyber Forces: insufficient DOD cyber force structure . . . linkage back to 4.9 with no overarching planning and plan analysis to drive force requirement to drive necessary force structure	1-3	3,13,14
Homeland Defense/Civil Support (HD/CS) Capabilities-Based Assessment (CBA)	Insufficient DOD capacity to handle large quantities of mass casualties, Biological Incident Support and CBRN Decontamination Support resulting from a large-scale CBRN incident . . . linkage back to 4.9 with no overarching planning and plan analysis to drive force requirement to drive necessary force structure	3,4	3,5,9,10
Homeland Defense/Civil Support (HD/CS) Capabilities-Based Assessment (CBA)	Logistical Health Medical Support: DOD has limited capability to meet Primary Agency needs for logistical health medical support response forces, within 96 hours, for large or overlapping catastrophic events . . . linkage back to 4.9 with no overarching planning and plan analysis to drive force requirement to drive necessary force structure	1-3	3,5,9,13,14
Homeland Defense/Civil Support (HD/CS) Capabilities-Based Assessment (CBA)	CBRNE Urban Search and Rescue: DOD has limited capability to meet Primary Agency needs for CBRNE urban search and rescue support response forces, within 96 hours, for large or overlapping catastrophic events . . . linkage back to 4.9 with no overarching planning and plan analysis to drive force requirement to drive necessary force structure	1-3	3,5,9,13,14
Homeland Defense/Civil Support (HD/CS) Capabilities-Based Assessment (CBA)	Riverine and Maritime Security (MARSEC) Levels: Inadequate maritime capabilities to meet anticipated Primary Agency requests to DOD for domestic shallow water and inland waterways operations that maintain a presence and sustain heightened USCG MARSEC levels . . . linkage back to 4.9 with no overarching planning and plan analysis to drive force requirement to drive necessary force structure	1-3	3,13,14
Homeland Defense/Civil Support	Countermines and Mine Countermeasures: Maritime forces have inadequate capability to meet anticipated Primary Agency requests to DOD to conduct	1-4	3,5,13,14

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
(HD/CS) Capabilities-Based Assessment (CBA)	countermine and mine countermeasure activities within domestic ports, waterways, and littorals in a persistent, agile, expeditionary, and effective manner . . . linkage back to 4.9 with no overarching planning and plan analysis to drive force requirement to drive necessary force structure		
Homeland Defense/Civil Support (HD/CS) Capabilities-Based Assessment (CBA)	Isolation and Quarantine Support: DOD has limited capability to meet Primary Agency needs for isolation and quarantine support response forces, within 96 hours, for large or overlapping catastrophic events . . . linkage back to 4.9 with no overarching planning and plan analysis to drive force requirement to drive necessary force structure	1,3,4	3,9,13,14
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Develop and implement improvements to the use and enforcement of supply and transportation priority codes (Functional Activity Designators, Project Codes, and JCS transportation priority codes) Review supply policy/procedures and recommend improvements Review JCS transportation priority policy/procedures and recommend improvements	2,4	3,4
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Develop, document, and implement standard procedures and business rules to execute urgent deployment (i.e., those deployments that occur inside validation window) Review JOPES Volume III, TPFDD Letter of Instruction and draft rules for urgent CONUS/OCONUS deployments. Continue to assess possible IT solutions that can support established (existing or new) procedures	1-4	13, 14
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Improve Joint Deployment Process performance through the establishment, implementation, enforcement, and maintenance of Joint Deployment metrics Develop and document metrics to include: 1) Readiness Metric: measure of the capability to efficiently and effectively respond to force projection mission requirements; 2) Process Metrics: measure of procedural compliance versus established standards; 3) Performance Metrics: measures and criteria that define successful execution of deployment-specific and deployment-related joint tasks described in CJCSM 3500.04C “UJTL”	1-3	14-18
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Accelerate the development of the concept of Force Packaging and prototype capability of the JCRT to support Capabilities-Based Planning Expand JCRT prototype to include refining of doctrine on capabilities-based planning and Service-defined force capabilities packages Fully develop a CONOPS for Force Packaging and capabilities-based planning (this is similar to but fundamentally different from the use of Force modules currently available in JOPES) Deliver JCRT operational prototype in spiral development leveraging actions 1 and 2 Incorporate JCRT into GCCS and eventually into the future program JC2 Work with Services, and USJFCOM in Joint Conventional Force Provider role, to develop force capability modules for use in populating the JCRT tool	3	3,5,7,8,10, 11
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Utilize the Joint Force Projection ACTD to prototype a “Force Projection” domain/enclave (mission capability package) in the future JC2 system Gain approval and funding for an FY05 Joint Force Projection ACTD Execute three spirals of capability development and link to a program of record (GCCS) and future program of record (JC2) Implement a Force Protection MCP for JC2 Develop policies and procedures for rapidly developing and delivering net-centric technologies and prototypes into the force projection family of systems Integrate rapid force build, prioritized force flow, and drag and drop editing	2-4	1,3-11

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
	capabilities, into existing programs of record Integrate advanced planning and force flow editing capabilities against a process driven workflow and business activity monitor to provide end-to-end monitoring and management of the joint deployment process		
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Accelerate the interoperability of tactical level unit movement data Complete the SPG 05 tasker to conduct an AoA on unit movement systems Implement the interoperability recommendations of the AoA, as approved by the FCB/JCD/JROC process Manage deployment data standards through the Force Projection COI that encompasses the JPEC, OSD, JS, and other DOD agencies	1-4	2,12-14,19
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Determine requirements and revised business rules to develop capability to “data-mine” official JOPES decisions recorded in various media Conduct a Quick Look of existing and emerging systems to assess their ability to address this problem Evaluate capability needs and existing tools Determine tech solution and package	2	3-7
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Define and implement technical standards required to execute the DOD Net-Centric Data Management Strategy within the Joint Deployment Family of Systems Continue to establish and maintain a Force Projection COI to implement DOD Net-centric data management policies Define and maintain Joint Force projection logical data model for the Joint Deployment family of systems, as defined by the Joint Deployment Enterprise Architecture Define, publish and maintain standards for metadata tagging and data sharing for the COI consistent with DOD policies Develop prototype tools to leverage the advantages of shared data and net-centric Force Projection capability	2,4	3-5
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Identify joint requirements for, and means to designate and track, JOPES-trained joint operations planners across Services (e.g., operations planners, deployment planners, JOPES operators – military and government civilian personnel) Conduct study to determine most cost effective means to accomplish this approach Develop joint personnel requirements for worldwide JOPES/deployment planning billets by grade Develop requirements for Services to track JOPES trained/qualified operators and provide visibility of those individuals to the unified commands as required. Incorporate into Joint policy and guidance that services will then be required to integrate into service specific instructions, regulations, and information systems		
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Develop and implement policies, procedures, and enforcement mechanisms to maximize the use of JDTC JOPES training quotas Provide joint deployment planning and execution educational products to JPME institutions Review reasons quotas go unused and work closely with the Service Training Managers to recommend and implement procedures to ensure quotas are utilized to the maximum extent possible Develop and implement mechanisms to enforce use of train gin quotas	1	14-15

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
Lessons Learned DCR: OIF MCO – Deployment Planning and Execution	Increase the quality and quantity of Joint Deployment Planning and Execution training in Joint Exercises Develop and implement classroom and exercise training standards to emphasize accurate and timely data updates and report submission Develop near- and long-term plans to incorporate deployment planning and execution training and education in partnership with COCOM exercises worldwide. Increase ability to provide JDTC Mobile Training Teams to support COOCM and Service staffs Continue developing M&S tools to exercise dynamic force flow in joint exercises, such as those in development at USPACOM and USFORSCOM.	1	14,15
Joint DCR for Joint Deployment and Global Distribution Process Improvement: FTN - Focus Warfighter	Develop and implement force allocation and sourcing doctrine, policy and procedures for FTN Modify Joint pubs to reflect changes in force allocation, sourcing, and integration to include FTN as appropriate Modify policy related to force allocation, sourcing, and integration to include FTN. Develop, modify and synchronize policy to support utilization of the FTN. Develop FTN standards, assignment procedures and MOEs to be included in JOPES Vol I, II, and III	1,3	5-8, 10-12
Joint DCR for Joint Deployment and Global Distribution Process Improvement: FTN - Focus Warfighter	Design and develop training for FTN actions Design, develop and synchronize FTN training with the procedures to be incorporated into Joint Operational Planning and Execution policy (CJCSM 3122 series and CJCSM 3150.16) and corresponding UJTL, and exercises	1	14,15
Joint DCR for Joint Deployment and Global Distribution Process Improvement: FTN - Focus Warfighter	Develop and incorporate FTN standards into joint deployment and distribution systems and conduct further analysis to determine the need/requirement for a global database to support Global Force Allocation Management Develop and incorporate FTN standards into joint deployment and distribution systems Define requirements for the development of a global database for FTN functionality to support GFM and COCOM operation execution	1,3	3-13
Joint DCR for Joint Deployment and Global Distribution Process Improvement: FTN - Focus Warfighter	Integrate FTN into GFM force requirements process to support the supported commander in operation execution Incorporate FTN in the plan execution Utilize FTN to execute GFM mission	3,4	3,4,13
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, display, generate, modify, and coordinate planning/execution orders. NECC shall provide capabilities to access, display, develop, modify, and coordinate a virtual situation book to organize, correlate, sort, store orders/alerts, and present information relative to a crisis action or adaptive campaign plan.	2	15,17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide at a minimum, the capability to conduct rapid force generation and management, prioritize forces to support employment concept within strategic and theater transportation constraints, provide logistics and force sustainment estimates, provide strategic and theater transportation planning support, force closure estimates, and overall concept assessment (wargaming) capability.	3	8,12
Net-Enabled Command Capability	NECC shall provide the capability to link joint C2 command relationships (OPLAN/OPORD Annex J) to the transportation planning data.	2	5, 8, 12,15,17

(NECC) CDD			
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, display, generate, analyze, coordinate, refine, validate, and archive force and logistic selections required to meet commanders' needs.	2, 3	1-8, 10, 11,
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to perform contingency sourcing, i.e., identifying backfill/substitute forces for plans when forces previously identified are not operationally available on a specified date.	3,4	8, 9, 13, 15, 17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide total force visibility to identify potential combat, combat support, and combat service support units (active, national guard, and reserve) to support COA alternatives based on readiness, availability, and time required to deploy and to perform contingency sourcing.	2, 3	6, 7, 13, 15, 17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide the capability to support dynamic and changing deployment packages in order to match validated concepts of operations (CONOPS). The logistics portion of the COP shall include supply, maintenance, transportation, personnel, medical, personnel recovery, noncombatant evacuation, reconstitution, politico-military support, finance, religious support, legal services, public affairs, and field services.	3	9, 13, 18
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, display, analyze, process, coordinate, and archive information to support: initial mobilization of reserve forces and the marshaling of logistic resources; identification of readiness status of deploying forces; management of critical logistic resources; incorporation of host-nation support; and identification of acquisition and cross-servicing agreements.	3	12, 14, 17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, display, analyze, process, coordinate, and archive data needs for force conversion, mobilization, deployment, and sustainment operations.	3	8, 10, 12, 13, 19
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to: access; display; analyze; process; model/simulate; and archive OPORD/OPLAN force, logistic, and transportation needs; including strategic movement needs; COA alternatives for adequacy; feasibility acceptability; and consistency with joint doctrine.	2	1-4
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, graphically display, monitor, and coordinate arrival of forces (e.g., whole or partial units, selected personnel) in theater or a Joint Operations Area (JOA) by Unit Type Code (UTC), Unit Identification Code (UIC), Unit Line Number (ULN), Transportation Control Numbers (TCN), and unit type (with associated unit sustainment) for each C-day of the plan to provide force closure assessment.	3	12, 16, 17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, graphically display, monitor, and coordinate combat power and combat power ratio of forces (includes RED forces) arriving in theater.	3	17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, display, develop, coordinate, modify, and disseminate current Force Closure Reporting (to include TPFDD) based on arrival of forces in theater.	3	17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, graphically display, monitor, and coordinate planned, scheduled, and actual deployment of units into a theater of operations or a JOA based on a TPFDD.	3	17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, display, monitor, assess, and coordinate the efforts to move planned forces and logistics needs to meet required delivery dates.	3	12, 15, 16
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to notify force movement planners of orders/alerts and senior leadership decisions and to display authorized changes to orders/alerts with status of required actions. NECC shall provide capabilities to cross reference and cross-link orders to provide a complete picture of the guidance in a series of orders.	3	12, 15, 16

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to collaboratively access, graphically display, develop, analyze, model/simulate, modify, coordinate, validate, disseminate, archive, and manage the TPFDD.	3	12, 15, 16
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to provide information for the coordination of deployment routing, over-flight routes, landing rights, and refueling routes, needs, timing, and schedules.	3	15,16
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, display, and analyze user-defined or predefined infrastructure information on facilities/terminals supporting multi-modal transportation (e.g., seaports, airfields, terminals, railway, barge, surface transportation).	3	16
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, display, generate, analyze, process, and coordinate transportation needs (e.g., schedules, flow paths, channel traffic) to meet force, non-unit, and logistic movement/sustainment needs from origin to destination.	3	12
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capability to generate Personnel Increment Numbers (PIN). NECC shall provide the capability to incorporate PINs into TPFDD movement needs as the basis for lift analysis and allocations.	3	12
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, display, create, modify, and store queries defining force modules.	3	12
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to create and maintain hierarchical relationships between force modules and to lock force modules preventing modifications or deletions of record level contents.	3	12
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to cross-reference and cross-link force movement needs (e.g. link UTCs and ULNs to forces identified in deployment orders). NECC shall provide the capability to correlate ULNs to Transportation Control Numbers (TCN) and transportation carriers.	3	12,16
Net-Enabled Command Capability (NECC) CDD	NECC shall provide the capability to track location and operational status of forces (to include personnel and equipment designated to support the plan) and to access, graphically display, coordinate, and monitor: Location/operational status of assets (i.e., personnel/equipment down to the item/personnel identification levels) from origin to destination via single/multiple carriers; Planned, scheduled, and actual movement of assets; Location/operational status of air, land and sea movements.	3	17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capability to seamlessly interface the GTN and JOPES databases in support of cargo and personnel movements to include organic and non-common (e.g., commercial, multinational) user transportation provided by USTRANSCOM and other sources. Visibility of transportation missions and assets and the location of key replacement personnel, supplies, and equipment in transit including the time-definite, ground, sea, rail, or air, delivery of material, equipment, units, personnel, and services from the sustaining base to installation to intermediate sustainment bases to the area of operations.	3	17
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, graphically display, generate, process, and coordinate sustainment estimates based on origin to destination movement.	3	19
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access, graphically display, analyze and coordinate transportation feasibility to support force and logistics movement needs executing simultaneously from multiple OPORDs and OPLANs. NECC shall provide the capability to seamlessly interface the Joint Flow & Analysis System for Transportation (JFAST) and Analysis of Mobility Platform (AMP) in support of feasibility determination as provided by USTRANSCOM.	3	12, 16, 17
Net-Enabled Command Capability	NECC shall provide capabilities for operational users to access, display, analyze, coordinate, and disseminate TPFDD scheduling and movement needs.	2,3	12

(NECC) CDD	NECC shall provide the capability to seamlessly interface with transportation feasibility capabilities in exercise support and planning as well as conducting Crisis Action planning.		
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to automatically notify planners and force providers of plan changes such as requirements, dual tasking and sourcing solutions when changes are approved.	1,3,4	10,13
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities necessary to achieve a current, unobstructed, worldwide view of force / capability inventory and force / capability commitment, availability and readiness; and the ability to readily discern changes in status.	2	6-8
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access and display comprehensive force structure inventory; identify forces with a specific requested capability; display force readiness in a common language; ensure compliance of sourcing solutions IAW Global Force Management (GFM) strategic guidance; determine force availability; display force location; identify force apportionment; display force location in a COP during deployment and re-deployment and save work in progress. The implicit concept of operations for this set of capabilities is to identify, from a comprehensive DOD force structure inventory, qualifying units, etc., based on identifier or capability; eliminate units based on current or projected readiness; eliminate units based on GFM strategic guidance; eliminate units based on availability; eliminate units based on location; and eliminate units based on commitment to plans. The units remaining from the initial set are candidates for a required force or capability.	2	1,2
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access and display the DOD force/capability inventory required to establish a units/"deployable entities" baseline to draw from to meet a requested force/capability.	2	1,2
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access comprehensive Joint and Service Force Structure inventory data down to the smallest "deployable entity" commonly used to meet Regional Combatant Commander (RCC) requirements, e.g., teams, detachments, platoons, squads, troops, companies, elements, possibly down to the MOS/individual level, and shall provide capabilities to include ad hoc deployable entities which are task organized to meet emergent mission requirements.	2	1,2
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to display and manipulate inventory data in graphical and textual formats and to export inventory data returned by queries or other means in word processing, spreadsheet and presentation format and in device and resolution independent format. Ability to identify and track DOD force structure elements (down to the smallest deployable entities" level) as defined above. Required (THRESHOLD) Required (OBJECTIVE) Ability to identify and track ad hoc "deployable entities" which are task organized to meet emergent mission requirements Not required (THRESHOLD) Required (OBJECTIVE) Accuracy of force structure inventory query results as measured against Service or agency authoritative sources (TBD) Ninety (90)% (THRESHOLD) One Hundred (100)% (OBJECTIVE) Delay between Service or Agency update to authoritative data sources (TBD) and inclusion in queriable force structure inventory Not more than twenty-four (24) hours (THRESHOLD) No delay (Near Real Time inclusion) (OBJECTIVE)	2	1,2
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to generate a preliminary list of candidate units/"deployable entities" to meet the requested force/capability. This list shall represent the entire joint sourcing solution set for meeting each RCC requirement.	3	7

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to identify units/"deployable entities of units" (by name, UIC or other designator) that equate to a requested force or capability (Request for Forces [RFF]/Request for Capability [RFC] for contingency operations) and rotational requirements (for ongoing operations) and requirements to source contingency plan (OPLAN/CONPLAN/FUNPLAN) TPFDDs.	3	7
Net-Enabled Command Capability (NECC) CDD	NECC shall provide the capabilities to include and identify ad hoc "deployable entities" which are task organized to meet emergent mission requirements in addition to other units/"deployable entities of units".	3	7
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to display and manipulate qualifying units/"deployable entities of units" in graphical and textual formats and to export qualifying units/"deployable entities of units" returned by queries or other means in word processing, spreadsheet and presentation format and in device and resolution independent format. Ability to identify DOD force structure elements (down to the smallest "deployable entities" level) as defined above. Required (THRESHOLD) Required (OBJECTIVE) Ability to identify ad hoc "deployable entities" which are task organized to meet emergent mission requirements Not required (THRESHOLD) Required (OBJECTIVE) Accuracy of force structure inventory query by unit identification or capability as measured against Service or Agency authoritative sources (TBD) Ninety (90)% (THRESHOLD) One Hundred (100)% (OBJECTIVE) Retrieve/input query results and export/import data into application in compliance with joint system of record (GCCS-J, others) application standards Required (THRESHOLD) Required (OBJECTIVE)	2,3	6
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access and display measured readiness for candidate units/"deployable entities" to meet a requested force/capability. Readiness shall include traditional Overall, Personnel, Training, Equipment and Supplies (OPTES) readiness data as well as mission unique data requirements for units/"deployable entities" to meet each RCC requirement.	2,3	6,7
Net-Enabled Command Capability (NECC) CDD	NECC shall provide the capabilities to access and display measured current and projected OPTES readiness at the appropriate level of reporting for the required capability/force across the joint sourcing solution set (down to the smallest "deployable entity" commonly used to meet RCC requirements, e.g., teams, detachments, platoons, squads, troops, companies, elements, possibly down to the individual) in common language/standards of measurement.	2,3	6,7
Net-Enabled Command Capability (NECC) CDD	NECC shall provide the capabilities to access and display current and projected OPTES readiness data and mission unique data bearing on readiness. NECC shall provide capabilities to reflect changes in readiness within one (1) day of submission to the appropriate readiness application/system.	2,3	6,7
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to access and display the above readiness information for ad hoc "deployable entities" which are task organized to meet emergent mission requirements.	2,3	6,7
Net-Enabled Command Capability (NECC) CDD	NECC shall provide capabilities to display and manipulate readiness data in graphical and textual formats and to export readiness data returned by queries or other means in word processing, spreadsheet and presentation format and in device and resolution independent format. Inclusion of current readiness levels as reported by the "unit" commander within one (1) day of status change against DOD force structure elements (down to the smallest "deployable entities" level) Required (THRESHOLD) Required (OBJECTIVE) Inclusion of current readiness levels as reported by the "unit" commander within one (1) day of status change against ad hoc "deployable entities" which are task organized to meet emergent mission requirements Not required	2,3	6,7

ICD for Adaptive Planning (AP)	(U) <i>Pg 4-5 – Required Capability, Tasking</i> : Rapidly create new plans or adapt current plans		1
ICD for Adaptive Planning (AP)	(U) <i>Pg 4-5 – Required Capability, Tasking</i> , Maintain plans in near executable state with data such as strategic guidance, assumptions, capability allocations, locations and readiness, etc current to the date the plan is reviewed	1, 2	1, 4, 5, 7, 8, 10, 12, 15
ICD for Adaptive Planning (AP)	(U) <i>Pg 4-5 – Required Capability, Planning</i> , Provide sourcing, as directed by strategic guidance, as a function of the collaborative planning process, integrating the following force management capabilities with the APEX process and systems: A global force requirements database management capability to capture sourcing requirements	2, 3	1, 3, 8, 9
ICD for Adaptive Planning (AP)	(U) <i>Pg 4-5 – Required Capability, Planning</i> , Provide sourcing, as directed by strategic guidance, as a function of the collaborative planning process, integrating the following force management capabilities with the APEX process and systems: A global force sourcing collaborative staffing capability that supports the Joint Force Provider sourcing process and GFM approval process	3	7, 10, 11, 12
ICD for Adaptive Planning (AP)	(U) <i>Pg 4-5 – Required Capability, Planning</i> , Provide sourcing, as directed by strategic guidance, as a function of the collaborative planning process, integrating the following force management capabilities with the APEX process and systems: Global force visibility of authoritative Service force data to enhance the visibility of joint forces	2	
ICD for Adaptive Planning (AP)	(U) <i>Pg 10-17 – Capability Gaps, Process</i> : Parallel planning and collaboration are limited due to stove piped processes, resulting in unacceptably long planning times. Early identification and sourcing of forces and logistics requirements are necessary in order to determine force, transportation and logistics feasibility. Currently, identification and sourcing of requirements is time consuming and occurs too late in the planning process. Sourcing can take months with each service sourcing its requirement differently. This needs to be reduced to days.	1, 4	7

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, Process</i> : Current multinational and bi-lateral planning processes cannot keep pace with the envisioned AP process	4	
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, Process</i> : There is a lack of clear, prioritized strategic guidance, such as the Contingency Planning Guidance (CPG), Strategic Planning Guidance (SPG) and Strategic Guidance Statements (SGS), that keeps pace with the a changing strategic environment.		5
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, Process</i> : Lack of interagency coordination throughout the planning process to set the conditions for an executable plan.	4	9, 11
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, Products</i> : The capabilities needed for level of detail required in current OPLANs cannot be efficiently achieved in six months or less using the current planning system due to necessary trade-offs among detail, speed and quality.	4	
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, Products</i> : AP planners have differing needs that may not be met by satisfying only the SecDef IPR and level of plan standards outline in Contingency Planning Guidance (CPG) 05.	3	
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, People</i> : COCOMs are inadequately staffed (have insufficient capability) for their current workloads. Until the necessary resources and capabilities are fielded, acceleration of planning can only occur if more people perform more work on fewer plans and/or develop them to a lesser degree of detail	4	
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, People</i> : There is a lack of proficiency in and capability to conduct in-depth standardization education or training on joint contingency planning. Currently, the scope of joint operations planning requires specialists for mobilization, force sourcing, deployment, employment, sustainment and redeployment.	4	
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, People</i> : Lack of capability to conduct Joint Professional Military Education (JPME) and assignment of Joint Planning occupation skill identifiers resulting in a lack of career progression in joint planning or the tracking of joint planners for continuing joint planning assignments.	4	
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, Technology</i> : Planners lack a complete capability to develop, review, refine and execute plans in a net-centric environment that better enables information/data exchange and utilization and enhances parallel planning. Data required for planning are often unavailable, unreliable and/or not presented in a standard, recognizable format. Planners need timely and accurate Service/Force Provider sourcing data.	2	
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, Technology</i> : There are insufficient collaboration tools and a lack of collaborative tool training. Coordination of plans between headquarters requires multiple face-to-face meetings adding time to the development of every plan. Because many plans are in development at once, about two years are required for the planning community to develop any one plan to the level of detail required.	1	2

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – Capability Gaps, Technology: There is a lack of multi-level information security capability and training.	2	
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – Capability Gaps, Technology: Current JOPES ADP capabilities do not fully meet AP enabling technology needs. There is a lack of interoperability and integration between AP enabling technology and JOPES. Critical data must be transferred manually to JOPES data bases by trained data entry specialists, causing duplication of effort. JOPES ADP data entry and processing is time consuming. Feedback on force flow viability is slow and not collaborative.	2	13
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – Capability Gaps, Technology: There is a lack of standardized decision support and executive briefing templates. The lack of standardized templates and training requires planners to continually decipher each COCOM's particular methods and formats and reformat them into their own.	4	
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – Capability Gaps, Technology: There is no integrated wargaming capability to test and validate the plan's operational feasibility. Planners lack operational wargaming tools and training that allow planning flexibility by providing the ability to develop multiple COAs in a timely manner and producing initial logistics (sustainment and distribution) and transportation feasibility determinations and statistical sensitivity data for operational risk assessment.	44	1, 2, 9
ICD for Adaptive Planning (AP)	(U) Pg 10-17 – <i>Capability Gaps, Technology</i> : There is no capability to create "living plans." Planners have no capability to collaboratively and rapidly identify and source forces and logistics requirements or identify conflicts based on unit status, availability, location and/or readiness. Currently, there is no capability to create automated "triggers" to indicate that a review of a plan is necessary. This will ensure plans remain current through frequent revisions aligning them with new assumptions or constraints and also identifying the impact of those assumptions or changes.	4	
Global Force Management (GFM) Data Initiative (GFM DI) CONOPS	(U) Pg.6 – Currently, the data required to support an automated GFM process for the DOD is not visible, accessible, or usable because different systems within the DOD use different reference points. Without a common reference point, the DOD's systems cannot readily and easily integrate information requirements.	2	
Global Force Management (GFM) Data Initiative (GFM DI) CONOPS	(U) Pg. 6 – Currently, there is no single, authoritative data source (ADS) for force structure data that meets the needs of users and appropriate systems; therefore, each system creates its own force structure to meet its functional needs.	1	10
Global Force Management (GFM) Data Initiative (GFM DI) CONOPS	(U) Pg 33 – The US may execute different plans, depending on the circumstances, and this change will affect the apportionment of forces. As a result, the execution of a specific plan changes the ability to execute other	1, 4	1, 2, 9, 11

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
DI) CONOPS	plans, and the effect ripples through the force structure. It is imperative that decision makers have visibility to assess how allocation decisions impact apportioned forces, so that decision makers can minimize the potential risks.		
GFM DI CDD	(U) Pg. 8 – The impetus for implementing a comprehensive GFM Data Strategy (GFM DS) is that currently the assignment, allocation and apportionment processes are not integrated; the data necessary to support such integration is not visible, accessible, or usable; and there is no single, authoritative data source (ADS) for force structure data that meets the needs of users, systems, or functions. The force structure data created by the GFM DI lays the foundation for integrating these force management processes.	1, 2	1
GFM DI CDD	(U) Pg 8 – The JOpsC family of future capabilities, especially the joint functional and integrating areas of FM, C2, and FL, are reliant upon the success of GFM DI to resolve much of what the JOpsC effort identifies as the friction and inefficiency of the Department's force management capability. GFM DI implementation is also a requirement for achieving Total Force Visibility (TFV). TFV is referred to as MCP 1.3 in the NECC CDD.	2	
GFM DI CDD	(U) Table 6.2 – extrapolate from the Additional Attributes of GFM DI to get potential gap areas	4	
GAO Report – Force Structure: Actions Needed to Improve DOD's Ability to Manage, Assess, and Report on Global Defense Posture Initiatives	(U) Pg 3 – Geographic COCOMs have not established a consistent approach to monitor initiative implementation, assess progress, and periodically report on results because DOD has not yet developed global posture implementation guidance. Therefore, as COCOMs implement complex and interrelated initiatives, they lack guidance from OSD regarding the management of stakeholder concerns, the identification of potential challenges, or the status of mitigation strategies.	4	1
GAO Report – Force Structure: Actions Needed to Improve DOD's Ability to Manage, Assess, and Report on Global Defense Posture Initiatives	(U) Pg 5 – Global defense posture realignment efforts will continue to evolve as department objectives, priorities, and COCOM plans adapt to a dynamic international security environment.		1
The Success of GFM and Joint Force Providing (Bourdon and Ferriter)	(U) Additionally, GFM has made significant strides toward developing a network-centric Global Visibility Tool, which will provide the means for members of the GFM process to access the information necessary to support more timely and accurate force-providing decision-making.	2	
2006 Quadrennial Defense Review Report (06 QDR)	(U) Pg 60 – Increase resources to develop software, tactics, techniques, procedures and other initiatives needed to support the Global Force Management System.	2	
2006 Quadrennial Defense Review Report (06 QDR)	(U) Pg 66 – Force Employment – Determine how US forces are utilized and meet the day-to-day oversight needs of the joint force. Operational matters are the responsibility of the joint Warfighters. The Department's senior civilian and military leaders ensure that forces are employed in ways that meet the President's strategic objectives.		3
2006 Quadrennial Defense Review Report (06 QDR)	(U) Pg 86 – Improve the Department's ability to assess the relative benefits of security cooperation activities to better resource allocation decision	2	5, 7

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
Transitioning Defense Organizations Initiatives	(U) Pg 10 – Although the need to sustain the rotation in Iraq and Afghanistan has prevented full implementation of the Global Defense Posture (GDP) realignment, the GFM system has clearly helped to minimize the stress on the force. This success at the operational and tactical level, however, may have come at the expense of the broader geopolitical and strategic considerations that traditionally have shaped the US global defense posture.	1	
Transitioning Defense Organizations Initiatives	(U) Pg 11 – GFM was predicated on two mutually supporting ideas: 1) the COCOMs would define their needs in terms of capabilities, not specific force units, which gave DOD’s GFM process greater flexibility in “sourcing” requirements; and 2) regional COCOMs no longer “owned” the forces in their area of responsibility, since forces constituted a global inventory available for worldwide employment	1	5, 7, 8
Transitioning Defense Organizations Initiatives	(U) Pg 13 – Moreover, analytic tools developed in support of GFM (e.g., tracking systems for personnel, algorithms for assessing the substitutability of forces, etc) are maturing and enabling GFM to anticipate future needs and provide sufficient lead time for the force providers to assign responsibilities in preparation for future COCOM needs	2	
Transitioning Defense Organizations Initiatives	(U) Pg 13 – There may be an increasing gap between the tactical and operational efficiency of US GFM and broader military and national security objectives. <i>For example, GFM may enable DOD to maintain a global “persistent presence” of SOF, but it obscures the reality that there is never enough SOF to meet the demand for it. Although the COCOMs will continue to compete for scarce resources and the Services will continue to try to manage the demand for forces from the COCOMs, all seem to recognize that when the operational demand for forces significantly exceeds the available supply, the US GDP must adapt to changing security circumstances and US forces must be managed globally in order to meet that changing demand</i>		4
Transitioning Defense Organizations Initiatives	(U) Pg 14 – For the DOD, there is no real alternative to continual adaptation of its GDP and to managing its forces globally.	3	
Transitioning Defense Organizations Initiatives	(U) Pg 14 – DOD has no choice but to manage its forces both globally and efficiently. The efficiency with which DOD manages its available combat forces, however, far exceeds its efficiency in producing forces, a topic beyond the scope of this assessment.		7, 8
Transitioning Defense Organizations Initiatives	(U) Pg 18 – A second shortcoming (in the Department’s AP and APEX reforms) is the Department’s inability to marry its emphasis on agile plan development with the resources and capabilities to make such agility possible. APEX’s success relies on accompanying planning tools to bring efficiency to logistics, transportation and mobilization planning. Foremost among the needed tools is one that can expedite the creation of detailed alternative TPFDD.	4	
Transitioning Defense Organizations Initiatives	(U) Pg 34 – DOD has made substantially less progress over the past eight years in the evaluation of COA and risk assessment	4	1, 2, 9
Transitioning Defense Organizations Initiatives	(U) Pg 34 – The recently released 2008 National Defense Strategy illustrates the too slow evolution of DOD’s long-term risk management approach. Although it identifies the Department’s priorities, a key component of effective guidance, it is not explicit in stating lesser priorities that might be decremented to focus on them.	4	1, 2, 9
Transitioning Defense Organizations Initiatives	(U) Pg 35 – The GDF goes further than the Defense Strategy in clarifying risk choices, but even it has merely evolved from predecessor guidance documents that likewise attempted to articulate a small number of so-called “areas for increased risk.”	4	1, 2, 9
Transitioning Defense Organizations Initiatives	(U) Pg 41 – Although it will increase the contentiousness of the discussion and the proclivity of the Services to fight the process, there is a need to better tie resources into the future assessment process. In addition to the Future Forces Data Base (FFDB) and associated costing that are already tied into the DPSs,	4	1, 2, 9

	the Defense Program Projection (DPP) should be linked to futures assessment. In addition to answering the questions of where longer-range defense planners should take risk and where they should not, futures assessment must emphasize longer-range budgetary implications.		
Force Management Joint Functional Concept (FM JFC)	(U) The ability to generate and manage current, reliable, and authoritative data: Force management will require the ability to generate and manage current and reliable data with sufficient authority to generate trust in the validity of the data across the management process. Decision makers will employ this data in order to engage in collaborative management processes.	2	
Force Management Joint Functional Concept (FM JFC)	(U) The ability to set a joint standard for qualifications required for functional modularity within the Joint Force and its mission partners: This capability enables the force manager to effectively and efficiently arrange human and technical assets to create capabilities required by operational commanders by enhancing the comparability of assets, and the assessment of trade-offs between groups of assets in relationship to required capabilities.	3	
Force Management Joint Functional Concept (FM JFC)	(U) The ability to determine the global inventory of assets of the Joint Force and its mission partners: The ability to gain knowledge about human and technical assets to include quantity, location, relevance, serviceability, readiness and availability. Information must be available across all classes of capability and potential assets so that rotations, recapitalizations, reconstitutions, and transformations are accomplished with minimal disruption.	1, 2, 3	1, 6, 7, 14, 15, 16, 19
Force Management Joint Functional Concept (FM JFC)	(U) The ability to maintain human and technical assets during their life cycles in the Joint Force: This capability enables decision makers to maintain life cycle functions for human and technical assets over the course of their time in service. It includes long-term activities such as recruiting, materiel acquisition, training of individuals and groups, and quality-of-life related-issues that affect personnel retention.	1	19
Force Management Joint Functional Concept (FM JFC)	(U) The ability to assess and integrate new human and technical assets into capabilities: Innovative technology may enhance an existing asset or may be the catalyst for an entirely new capability. The force manager must be able to collaboratively assess the costs/benefits of introducing innovative assets and integrate those assets rapidly into capabilities for use.	2	19
Force Management Joint Functional Concept (FM JFC)	(U) The ability to assess utilization and mix: Historical information is needed to assess whether the Joint Force is properly sized and has the capabilities needed to meet near-term challenges. An important aspect of this is the use of gaming and simulation to support the underlying analyses that in turn underpin the assessment. The ability to track how Joint Force capabilities are employed is an important factor in this assessment.	7	17
Force Management Joint Functional Concept (FM JFC)	(U) The ability to allocate capabilities: The ability to identify and separate individual assets from aggregate sets of assets. To do this effectively, an understanding of how the asset apportionment will impact the functionality of both the individual and the aggregate assets is needed.	1, 3	5, 11, 12
Force Management Joint Functional Concept (FM JFC)	(U) The ability to anticipate future requirements: The ability to anticipate how requirements affect all aspects of capabilities development. Given the time needed to develop a leader, field a new system, or achieve a fully operational capability, initiatives must be taken well in advance. Capabilities must also be prepared to house, maintain, train, deploy, and sustain future assets.	1, 3	
Force Management Joint Functional Concept (FM JFC)	(U) The ability to achieve full situational awareness/understanding of Force Management decisions: Force management requires that decision makers have sufficient current and accurate knowledge of the bounding conditions of the decision space. Each choice has a consequence that creates or denies a future opportunity and diminishes or increases risk. The ability to see these opportunities and risks in advance enables better decisions in the present.	4	1, 2, 9
Force Management Joint Functional Concept (FM JFC)	(U) The ability to determine capability substitution: Force management will need to be able to make credible comparisons of assets and capabilities in order for the force manager to effectively provide assets and capabilities from	1, 3	

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
	different organizations in different ways.		
Force Management Joint Functional Concept (FM JFC)	(U) The ability to manage risk: Force management will need to be able to rapidly discern, measure, and assess risk across a number of parameters and against current risk thresholds to determine and act upon the best available options for fulfilling the need for specific capabilities. Risk discernment, measurement, and assessment will need to serve as a foundation for generating, analyzing, and mitigating risks associated with potential courses of action	4	1, 2, 9
Force Management Joint Functional Concept (FM JFC)	(U) The ability to adapt force management processes to changing strategic, statutory and policy parameters: Force Management will need to be sufficiently robust to deal with rapid changes along several parameters including the strategic and operational environment as well as important statutory and policy issues.	1,	1, 3
Adaptive Planning Roadmap I	Clear Strategic Guidance and Frequent Dialogue. AP will feature detailed planning guidance and frequent dialogue between senior leaders and planners to promote a common understanding of planning assumptions, considerations, risks, courses of action (COA), implementing actions, and other key factors.	1,2	5, 13, 15
Adaptive Planning Roadmap I	Living Plans Mature AP will produce net-centric “living plans.” A living plan is maintained within a collaborative, virtual environment and is updated routinely to reflect changes in intelligence assessments, guidance and/or the strategic environment. Automatic triggers linked to real-time sources (e.g. Defense Readiness Reporting System (DRRS), the Defense Logistics System, intelligence campaign planning and assessments, Global Force Management (GFM), the Defense Transportation System, strategic guidance) will alert leaders and planners to changes in critical conditions that warrant a reevaluation of a plan’s relevancy, sufficiency, or risk. As a result, living plans provide a solid foundation for their transition to crisis planning.	1,2	5, 13, 15
Adaptive Planning Roadmap I	Section 4.1.3. Concept Development – Step 2	1,2	3, 13-15, 17
Adaptive Planning Roadmap I	Section 4.1.4. Plan Development – Step 3	1,2	3, 13-15, 17
Adaptive Planning Roadmap I	Section 4.1.5. Plan Refinement – Step 4	1,2	3, 13-15, 17
Adaptive Planning Roadmap I	Table 1 – GFM provides for flexible force apportionment; assignment and allocation processes; increased visibility of force availability; and provides a mechanism to assess force management risk. The GFM Data Initiative provides a Joint hierarchical way to organize force structure data for integration across Military Department lines	2	15,17
Adaptive Planning Roadmap II	Certain aspects of planning and execution in the Joint Deployment and Distribution Enterprise (JDDE) will be performed outside the APEX system, but the results of those activities will be passed back into the net enabled planning and execution technology.	2,3	8, 9, 12
Adaptive Planning Roadmap II	The ability to monitor changes to strategic guidance, assumptions, resource availability and readiness, threat capabilities, and other appropriate planning parameters will aid in the ability to rapidly discern when plans need to be refined or adapted to keep them “living” and relevant or, if necessary, terminated or executed.	1,2	5, 13, 15
Adaptive Planning Roadmap II	When fully mature, the APEX system will integrate situation monitoring, readiness, global force management, intelligence, and logistics, to inform the Planning, Programming, Budgeting and Execution (PPBE) process on DOD resourcing issues.	1,2	3, 13-15, 17
Adaptive Planning Roadmap II	Key related DOD initiatives that enable and support the APEX system will continue to be developed and fielded. Other ongoing related initiatives within	2	15,17

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
	DOD will ultimately evolve to further enable the APEX system by establishing a more networked, collaborative environment and by providing access to current operational, intelligence, logistics and resourcing force management and readiness data and information.		
Adaptive Planning Roadmap II	Key authoritative planning data and information will be readily available and accessible. Many DOD initiatives upon which the APEX system depends (prototypes such as but not limited to Defense Readiness Reporting System (DRRS), Global Force Management (GFM)) rely on exposure of accurate authoritative data from the Military Departments and others for the success of their initiatives.	2	5,6
Adaptive Planning Roadmap II	“Living plans” will: Be frequently assessed for risks to objectives due to resource overages and shortfalls, validity and necessity of assumptions, organizational and institutional misalignment, paradigm shifts, etc.	4	4,5,9,10
Adaptive Planning Roadmap II	Process to Reach Roadmap II End State: The Implementation Stage focuses on establishing and refining the processes, procedures, and doctrine, leveraging improvements in Global Force Management, in order to facilitate a seamless transition from contingency or crisis action planning through execution.	3	12,14,16
Capstone Concept for Joint Operations (CCJO)	Common Operating Precepts Achieve and maintain unity of effort within the joint force and between the joint force and US government, international, and other partners. Plan for and manage operational transitions over time and space. Focus on operational objectives whose achievement suggests the broadest and most enduring results. Combine joint capabilities to maximize complementary rather than merely additive effects. Avoid combining capabilities where doing so adds complexity without compensating advantage. Drive synergy to the lowest echelon at which it can be managed effectively. Operate indirectly through partners to the extent that each situation permits. Ensure operational freedom of action. Maintain operational and organizational flexibility. Inform domestic audiences and influence the perceptions and attitudes of key foreign audiences as an explicit and continuous operational requirement.	1-4	1-19
Capstone Concept for Joint Operations (CCJO)	Implications of Adopting This Concept Build a balanced and versatile joint force. Create general-purpose forces capable of operating independently at increasingly lower echelons. Maintain the capability to project and sustain military power over global distances. Institute mechanisms to prepare general purpose forces quickly for new mission sets. Markedly improve the ability to integrate with other US agencies and other partners. Improve organizational solutions for protracted missions that cut across geographical boundaries. Develop senior leaders who are experts not only in the operational employment of the joint force, but also in the development and execution of national strategy.	1-4	1-19

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
	Improve Service and institutional adaptability to deal with rapid change.		
Military Contribution to Cooperative Security JOC	Risk: DOD force structure and force management policies will not facilitate the recruitment, development, rotation, and promotion of sufficient numbers of military personnel with appropriate regional expertise (based on repeated area tours) and the language, cross-cultural, and training skills suited to CS activities. Mitigation: This risk can be mitigated by giving priority in the implementation of this concept to the personnel-related capabilities described herein. Transforming force structure and management policies is a challenging but critical prerequisite to building the cultural familiarity, interagency experience, and personal relationships that will underpin an improved US regional security posture.	1	14
Military Contribution to Cooperative Security JOC	Limited Objective Experiment on Access provided the following insights: Force Management. Military forces must be managed globally rather than regionally (see concept assumption on the resourcing of CS efforts). This allows for surging a greater percentage of the force wherever and whenever necessary based on priorities. US military force management should be coordinated with other USG agencies as well as multinational partners to ensure a coordinated surge effort can be taken responsively when necessary to counter global and regional threats. SSTRO and HA skill sets will become increasingly important and needed in the future. The DOD and DOS must work together to build the requisite SSTRO and HA skill sets and other capacities in the future. An interagency equivalent to the Goldwater Nichols Reorganization Act of 1986 needs to be considered to facilitate more exchanges of officers between DOD and DOS as well as to develop the necessary DOS capacity to complement the capabilities of the DOD within combatant commands.	1-4	1-19
Irregular Warfare JOC	Critical Campaign Planning, Preparation, Execution, Assessment, Force Development, and Force Management Capabilities. Force Management. This capability seeks to recommend and provide forces in accordance with the Global Force Management Rotation Force Allocation Process for the purpose of supporting combatant commander requirements and Theater Security Cooperation Plans and allowing the rapid application of military force by placing US forces in a position from which they can rapidly respond to demands. Primary supporting tasks are: Manage the composition and disposition of the Joint Force to support protracted IW campaigns. Coordinate forward presence of joint forces in theaters in support of shaping operations and protracted IW campaigns.	1	14,16,17
Homeland Defense and Civil Support JOC	Force Management is the capability to integrate new and existing human and technical assets from across the Joint Force and its mission partners to make the right capabilities available at the right time and place in support of the NDS. This is especially important for DOD in determining the proper Active and Reserve Component mix required not only to conduct Forward Region missions, but also to ensure that the missions in the Approaches and the Homeland can be effectively conducted and supported. DOD must consider, as part of its Total Force management plan, the roles and contributions that its non-DOD interagency and coalition partners make to the Total Force effort in detecting, deterring, preventing, or, if necessary, defeating external threats and aggression, as well as direct attacks against the Homeland.	2	5-7
Military Support to Stabilization, Security, Transition, and Reconstruction Operations JOC	Risk – DOD force structure and force management policies will not facilitate the recruitment, development, rotation, and sustainment of sufficient military personnel for extended duration and manpower intensive SSSTR operations. (medium risk) Mitigation – The recommended mitigation strategy involves the development and experimentation of innovative concepts that would enable the Joint Force to conduct SSSTR operations without a dramatic increase in manpower, e.g., the	1	14

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
	development of niche and surge capabilities within the Total Force, longer tours to maintain force structure, and on-the-ground expertise.		
Combating Weapons of Mass Destruction JIC	Force Management Risk (Can DOD provide a trained and ready force?). (2) Risk: Currently the catastrophic quadrant of the four WMD challenges is the only challenge area that lacks an execution roadmap. The risk is that DOD does not manage the military capabilities to combat WMD and fails to provide a trained and ready force. Mitigation: DOD should implement strategic management of the CWMD military instrument. (3) Risk: A universally high demand upon low-density ISR assets may result in sub-optimal allocation of ISR to the JFC. Mitigation: Potential strategies include network sharing of ISR; close joint, IA and combined coordination of ISR to minimize redundant missions; and development of new persistent, multi-task ISR capable of conducting multiple simultaneous missions. (4) Risk: A universally high demand upon low-density specialized CWMD assets may result in sub-optimal allocation to the JFC. Mitigation: Make force elements with CWMD capabilities part of the Global Force Management system. (5) Risk: DOD develops CWMD specialized forces that have little utility outside of CWMD operations at the expense of general-purpose forces. Mitigation: Determine the optimal mix of specialized forces and acceptable risk through studies such as Operational Availability.	1,4	4,14
Joint Pub 3-35: Deployment and Redeployment Operations	Global Force Management and Force Projection At any given time there could be multiple requirements to employ military forces. Each operation could have a different strategic priority, and could be of a different size and scope. To effectively support multiple requirements, and apply the right level of priority and resources to each, requires effective global force management. Although the emphasis of this publication is on overseas deployments and redeployments, deployments within the homeland are possible in support of homeland defense and civil support. Deployments within the homeland follow the same basic processes as those overseas; however, the timelines can be shorter. The national importance of these missions is reflected in the elevated movement priorities that can be invoked by the President or SecDef. Airlift movement priorities are outlined in the Chairman of the Joint Chiefs of Staff Instruction (CJCSI) 4120.02, Assignment of Movement Priority. Surface transportation (commercial and organic) within the homeland can be a viable option for units within a reasonable distance of the operational area and should be considered when planning for and conducting these operations.	1,3	1-19
Joint Pub 3-35: Deployment and Redeployment Operations	Global Force Management. The global force management process provides global force visibility across OPLANS and on-going operations. Global force visibility is achieved by applying joint force structuring processes and data elements to force planning for contingencies and crises; detailed deployment and employment planning; and sound reporting procedures. (1) Global force visibility is preserved through effective force and phase planning for contingencies and crises; detailed deployment planning; and sound reporting procedures. The global force management process enables the military to be managed in a way that allows the President and SecDef to deploy the force where and when it is needed. It allows the Joint Staff to rapidly source the force needed for a specific CONOPS from a global, rather than regional, perspective and to surge capabilities when needed into crisis theaters from disparate locations worldwide. The US military's global presence must be managed dynamically, ensuring that our joint capabilities are employed to the greatest effect. Under this concept, forces are allocated to CCDRs as needed and sourced from anywhere in the world. Supported CCDRs use an approved operational order (OPORD) TPFDD as the primary means of communicating force requirements for an operation. The request for forces (RFF) (i.e., capabilities) process is used to obtain additional requirements not	2,3	1-12

UNCLASSIFIED

UNCLASSIFIED

Reference Document	Key Areas	GFM Capability Link	GFM Task Link
	already authorized or approved. (2) During the initial and subsequent deployments, DOD leadership may use RFFs and deployment orders (DEPODs) in lieu of the TPFDD. Deployments under subsequent DEPODs as a result of RFFs can significantly impact the flow of forces. Commanders and their staffs must understand the associated impact of additional force flow that had not been previously planned. For additional information, see Global Force Management Guidance Fiscal Year (FY) 2005, Chairman of the Joint Chiefs of Staff Manual (CJCSM) 3122.01A, Joint Operation Planning and Execution System, (JOPES) Volume I (Planning Policies and Procedures), and CJCSM 3122.02C, Joint Operation Planning and Execution System, (JOPES) Volume III (Crisis Action Time-Phased Force and Deployment Data Development and Deployment Execution).		
Joint Pub 3-35: Deployment and Redeployment Operations	Global Force Management is an enabler of force projection. Force projection is the ability to project the military instrument of national power, systematically and rapidly deploy and integrate joint military forces and the concomitant sustainment material in response to requirements across the range of military operations. Force projection allows a JFC to strategically position and concentrate forces to set the conditions for mission success.	3	14,16,19
Joint Pub 3-35: Deployment and Redeployment Operations	The CONOPS is the basis for force and deployment planning. The CONOPS details the phases of the operation, prioritizes the major missions within each phase, and identifies the forces required to provide those capabilities needed to meet mission requirements. The missions establish the force requirements and the prioritization determines the deployment flow of forces and support into the theater. The missions assigned to a force will determine the pre-deployment, support, and joint force integration requirements of that force. The CONOPS determines the size and scope of mobilization, deployment, JRSOI, sustainment, and redeployment activities.	3	3-5, 18, 19
Joint Pub 3-35: Deployment and Redeployment Operations	Sustainment is the provision of personnel, logistic and other support required to maintain and prolong operations or combat until successful accomplishment or revision of the mission or of the national objective. Sustainment is ongoing throughout the operation. Sustainment operations must be closely linked to the phases and mission priorities of the CONOPS to ensure mission effectiveness without logistic shortages or excesses, which could reduce the efficiency of the force. Sustainment requirements are projected and planned based on the phases and missions of the operation. Consumption is monitored throughout the operation to support continuous projection of requirements.	1, 3	19
Joint Pub 3-35: Deployment and Redeployment Operations	Joint Force Mobility. Mobility is the quality or capability of military forces, which permits them to move from place to place while retaining the ability to fulfill their primary mission. Mobility is a function of force, resource, operation, deployment, and sustainment planning. Mobility requires standard procedures; global force visibility; integrated employment and deployment planning; effective execution of pre-deployment actions; and movement execution supported by networked operation planning, deployment, and transportation information systems.	1, 2	12, 14
Joint Pub 3-35: Deployment and Redeployment Operations	The contingency OPLAN and its time-phased force and deployment list (TPFDL) structure must be designed to ensure the Services acquire, train, and equip forces to meet the most probable operation requirements. The design must support rapid transition of the TPFDL to align forces and missions for the phases of an actual crisis. An integration of sustainment forecasts with force projection plans is critical to success. Force alignment to missions within phases must be documented to enable rapid realignment with the actual mission requirements of a crisis. The OPLAN and the TPFDL structure for an OPORD must be designed to preserve unit integrity, agility, mobility, and security should events or conditions require execution of plan branches or sequels. The force structure must be understood by supporting commands and enable global force visibility to ensure unity of effort and rapid response to actual operational events.	1,2,3	12-19

Section 3 – GFM Tools

The list of tools below was solicited from the GFM stakeholders as tools they regularly use in conducting their GFM duties. Individual stakeholders do not necessarily use each tool on the list. This list does not include tools in development. There may be tools that are useful in the GFM enterprise that are not listed. This is not intended to be an all-inclusive list. Many of these tools were designed to serve other processes that overlap with GFM in the OV-1 in Appendix A, but have proven useful to one or more stakeholders.

ALPS. Adaptive Logistics Planning System

AMHS. Advanced Message Handling System

ART. Aerospace Expeditionary Force Reporting Tool

AST. ARFORGEN Synchronization Tool

2313 **Appendix H – Global Force Management (GFM) Process Modeling**

2314 The process models in Figures H-1 through H-6 document relationships between key elements within the assignment, apportionment, and
2315 allocation processes. The information used to construct these models came from the key Global Force Management (GFM) documents listed in
2316 Section 1.2 of this document and was validated/verified via subject matter expert (SME) review. The intent of these models was to better
2317 understand the factors that influence decisions and other key points in the GFM processes. These models could be further expanded; however, for
2318 this Quick Turn CBA, the diagrams adequately display the complexity and interdependency of the GFM processes. The process used to create the
2319 models exposed each process as separate yet inter-related entities, emphasizing the interdependencies of the processes within a dynamic GFM
2320 enterprise. The models captured the complexity of the GFM process at a high level, while also providing assistance in generation of the GFM
2321 capabilities, tasks, and gap analysis.

2322 The first three figures show the processes and the relationships among many factors influencing the processes and show where in the models the
2323 tasks occur. As with the explanation of task derivation in Appendix D, each stakeholder performs similar tasks. Therefore, in these models a task is
2324 often shown in several areas.

2325 The final three figures show the processes and relationships among many factors influencing the processes and show where in the models the gaps
2326 occur. Several of the gaps are not depicted in the models because the nature of the gap spans the entire spectrum of GFM, such as training.

2352 **Appendix I – Threat Assessment**

2353 This section addresses the unclassified threat and operational environment.

2354 **Section 1 – Operational Environment**

2355 I.1.1 The joint operational environment in which Global Force Management (GFM) will be exercised, and
2356 the manner in which this capability will be employed, must be net-centric. This environment will
2357 facilitate the transition of GFM from a managerial to an operational construct that supports and empowers
2358 leaders to create and make capabilities available to the operational commanders. In turn, in addition to
2359 becoming net-centric, GFM must become leader-centric to facilitate initiative and decision making at the
2360 lowest appropriate level.

2361 I.1.2 Deployment of increasingly powerful and robust information networks will enable information
2362 sharing and collaboration capabilities that, if adequately protected, can transform GFM into a predictive,
2363 streamlined, and integrated process supported by net-centric tools. Commanders need access to the
2364 information held by their colleagues in other echelons or to inform those in command of other functions.
2365 The availability of multi-source, multi-path information will lead to greater shared awareness and
2366 understanding, as well as to a higher degree of confidence in the availability and quality of information.
2367 Leveraging this multi-echelon information, commanders will collaborate on their decisions to maintain
2368 unity of effort in a rapidly changing environment. The ensuing increases in GFM agility will enable
2369 commanders to better deal with the uncertainty, complexity, and dynamism of the operating environment.

2370 **Section 2 – Threat Assessment**

2371 I.2.1 GFM requires the storage, processing, and transfer of vast amounts of information to enable the
2372 integration of the assignment, apportionment, and allocation functions. Diverse worldwide threats will
2373 continue to target GFM-related information with the intent to achieve compromise of information/data,
2374 deception or corruption, information denial or loss and physical destruction or damage. Some subsets of
2375 these threats will most likely have specific tasking against US communications, networks and computer
2376 systems. While this threat predominantly affects the operational activities associated with Adaptive
2377 Planning and Execution (APEX), the threat is present throughout system development and sustainment of
2378 the GFM Data Initiative (DI) and Defense Readiness Reporting System (DRRS)/ GFM Data Solution
2379 programs. The Information Operations (IO) Capstone Threat Assessment (IO CTA), DI-1577-37-07
2380 (April 2007) (S//FGI//IMCOM//NF) and *United States Strategic Command (USSTRATCOM) Threat*
2381 *Documents (Vol.1 and 2)* provide specific information on worldwide threats.

2382 I.2.2 Current and projected threat capabilities (lethal and non-lethal) that GFM must counter are the same
2383 as those facing any existing information technology (IT) system. GFM will also face current physical
2384 threats, including the entire spectrum of direct and indirect fire weapons, chemical contamination, and
2385 nuclear destruction. Hostile intelligence collection activities and IO attack (from trusted insiders and
2386 external hackers) could threaten GFM information, as could unauthorized disclosure of classified
2387 information. If data is unreliable or information connections among the DRRS components are
2388 inoperable, APEX will not be capable of receiving timely and accurate information, and the resulting
2389 course of action (COA) development may not address the current information environment. Further, GFM
2390 processes must enable commanders to rapidly integrate disparate capabilities from a variety of sources
2391 and locations to create a cohesive force.

2392 I.2.3 In the future, both non-state and nation-state adversary attacks against GFM networks will continue
2393 and become more sophisticated. System specific threats to GFM include computer network operations
2394 (CNO), espionage, conventional attack, terrorism, sabotage, weapons of mass destruction (WMD), and
2395 electronic warfare (EW) (encompassing electronic attack [EA] and electronic warfare support [ES]). IO

UNCLASSIFIED

UNCLASSIFIED

2396 threats including EW, denial and deception, and CNO, pose the most stressing and the most likely threats.
2397 IO threat mechanisms have been grouped into four categories: 1) compromise of information; 2) data
2398 deception or corruption; 3) information denial or loss; and 4) physical destruction or damage.

2399 I.2.3.1 GFM systems will be a likely target through direct or indirect attacks to the system network
2400 infrastructure and Service, agency, and joint-provided data sources. Aggressor organizations and
2401 countries regularly probe and scan DOD systems, in order to define network architectures and assess
2402 vulnerabilities, as a prerequisite to exploitation or attack. Electronic warfare threats, such as jamming,
2403 interception, and exploitation of the communication links, may jeopardize GFM systems. GFM is also
2404 susceptible to the degradation of commercial and military communication links it relies on.

2405 **Section 3 – Threat References**

2406 I.3.1 Threat references for the general threat environment for information systems are described in
2407 Defense Intelligence Agency (DIA), DOD, and Service-validated publications. For detailed threat
2408 information, refer to the following documents (titles of these documents are unclassified, but the contents
2409 of the document are classified):

- 2410 • (U) *Information Operations Capstone Threat Assessment, DIA-1577-33-07*, April 2007
2411 (S//FGI//IMCOM//NF).
- 2412 • (U) *Chemical, Biological and Radiological Warfare Capstone Threat Assessment, DIA-05-0909-*
2413 *027, October 2009 (S//NF).*

2416 Appendix J – Detailed Gap Solutions

2417 Appendix J provides a discussion of detailed gap solutions by the prioritized solution category and gap
2418 solution statement listed below in Table J-1.

2419 **Table J-1 Prioritized Solution Category and Gap Solution Statement**

Prioritized Solution Category and Gap Solution Statement	D	O	T	Materiel IT EV TR	L	P	F	(P)
Vision								
Future vision for GFM following alignment of assignment, allocation, and apportionment requires defining.	•				•			•
Develop continuous GFM end state definition and improvement.		•			•			•
Doctrine/Policy								
GFM should be fully incorporated into existing doctrine and procedures to sufficient detail to ensure synchronization across all GFM stakeholder processes (e.g., APEX, Deployment, Distribution).	•		•		•	•		•
GFM standards and practices should be documented in appropriate DOD policies (e.g., Chairman of the Joint Chiefs of Staff Instructions [CJCSI] and Chairman of the Joint Chiefs of Staff Manuals [CJCSM]) to create the authoritative basis for doctrine and procedure documentation.	•		•		•			•
GFM doctrinal refinement suitable for the development of standardized programs of instruction and establishment of training initiative needs to be developed across DOD.	•		•		•	•		•
Processes/Procedures:								
GFM-based risk analysis needs to not only continue to capture risks to the force provider, supported and supporting Combatant Commands, but also needs expansion to analyze opportunity costs/risks (resulting from incremental allocation decisions) to other Combatant Commands.				•	•			•
A process needs to be developed linking allocation to the budgeting process reducing the lag between operational requirements/tasking and budget decisions.	•	•	•		•			•
Changes across DOTMLPF-P need to be instituted to reduce the lag between DOD guidance and the force pool structure/alignment.	•	•		•	•	•		•
Increased capacity of the sourcing community by increasing available trained personnel and integrating interoperable compatible tools provide Combatant Commands with the flexibility to generate preferred forces as needed to support planning assessments.	•	•	•	•	•	•		•
Supporting Technology:								
Provide global visibility of Joint and Service force data (e.g. readiness, force structure, force alignment, and data context) by establishing and enforcing data, interface, and collaboration standards.			•	•	•	•		•
Actualize the full GFM Enterprise potential by increasing operational trust between GFM stakeholders by providing adequate transparency of information.			•	•	•	•		•
Improve existing and emerging GFM information technology so they are available across the enterprise and able to be rapidly updated and improved.			•	•	•	•		•

2420 Section 1 – Vision

- 2421 • **Future vision for GFM following alignment of assignment, allocation, and apportionment**
2422 **requires a more detailed definition of the end state and roadmap to reach the end state.** The
2423 interim actions taken to date to align the three processes under GFM were a good start but to
2424 continue to meet the purpose of GFM to transform these three processes to a single, integrated,
2425 capabilities-based process that is also completely merged with APEX and integrated with other
2426 processes requires additional analysis and study. Without this clearly defined end state, GFM will

UNCLASSIFIED

UNCLASSIFIED

continue to function and evolve but the evolution may not be in the right direction. While continued functioning of GFM is necessary to support current operations of the DOD, a lack of GFM evolution will not allow the DOD to reach its goals in areas of Adaptive Planning and Execution (APEX), Force Generation, and Force Development. Some type of concept of operations, operational concept, or even a joint integrating concept (JIC) must be developed to clearly define the end state for GFM and begin to outline the roadmap to reach the end state. While the FM JFC provides initial context, it does not contain sufficient detail on the end state of GFM to provide the framework for current and future GFM evolution. (**Gap CG-1, CG-6, CG-7, CG-8**)

- **Develop continuous GFM end state definition and improvement.** While mechanisms are in place (e.g., GFMB, Joint Force Provider) to overwatch and govern the day-to-day execution of the GFM enterprise, the GFM CPI organization must focus on the improvement of the GFM enterprise. The tempo of operations combined with the volume of requests and requirements running through the GFM enterprise on a daily basis necessitate the need for the GFM CPI organization to work on fundamental improvements and guide the evolution of the GFM enterprise. As critical piece of evolving GFM, the GFM CPI organization needs to work to understand the overall GFM architecture and ensure efficient use of development efforts, technology reuse, and data sharing across multiple communities of interest is occurring to satisfy emerging needs. The GFM CPI must exercise its charter to define the end state of GFM (in a concept of operations, operational concept, or JIC), identify and implement the incremental improvements necessary to evolve GFM, and serve as the global integrator of GFM enterprise data and technology. (**Gaps CG-1, CG-3, CG-4, CG-5, CG-6, CG-7**)

Section 2 – Doctrine/Policy

- **GFM standards and practices should be documented in appropriate DOD policies (e.g., Chairman of the Joint Chiefs of Staff Instructions [CJCSI] and Chairman of the Joint Chiefs of Staff Manuals [CJCSM]) to create the authoritative basis for doctrine and procedure documentation.** Currently, GFM processes and procedures are spread out across multiple documents including the *GFMIG*, *Annual GFMAP*, *Annual Rotational Forces Request PLANORD*, *Annual JFP PLANORD*. An appropriate CJCSI/M would serve to consolidate these documents, provide a mechanism to ensure deconfliction of the processes and procedures, and provide the clear direction of the Chairman of the Joint Chiefs of Staff. Consideration should be given to adding the GFM capabilities and tasks to the JCAs and UJTL. Additionally, they would provide the authoritative, policy-based foundation for all doctrine and procedure development. Finally, these would also provide the opportunity to ensure GFM processes and procedures are closely linked to the APEX, Deployment, Distribution, readiness and other related process and procedures today and as both enterprises (GFM and APEX) continue to evolve. (**Gap CG-1, CG-2, CG-4, CG-9**)
- **Fully incorporate GFM into existing doctrine and procedures in sufficient detail to ensure synchronization across all GFM stakeholder processes (e.g., APEX, Deployment, Distribution).** References to GFM in current doctrine are very limited in number of references, depth of detail, and currency of the reference. A plan to update the references to GFM in policy must be developed in order to establish the foundation for a GFM training program. All applicable DOD/Joint policy documents must be updated first to provide the authoritative basis for doctrine updates in accordance with CJCSI 5120.02A. The plan must accommodate both updated current doctrine and procedures and incorporate a mechanism to ensure future policy, procedures, and follow-on doctrine reflect the latest developments in GFM. This will create an authoritative foundation enabling the creation of standardized GFM programs of instructions (POIs) and ensure synchronization across all GFM stakeholder processes. A common, standardized foundation for all

UNCLASSIFIED

UNCLASSIFIED

2473 GFM stakeholders, regardless of the organization, will provide a critical first step towards
2474 improving operational trust across the GFM enterprise and eventually increasing overall capacity
2475 and throughput of the GFM enterprise. The doctrine and procedures developed will need to be
2476 aggressively maintained, as policy and supporting technology is developed in order to provide
2477 enforceable processes and procedures for the use of the data and maintenance of data integrity.
2478 (Gaps CG-1, CG-2, CG-3, CG-4, CG-5)

2479 Section 3 – Processes/Procedures

- 2480 • **Refine the GFM-based risk analysis process.** The refined risk analysis process must include a
2481 broader focus and increased clarity of guidance to capture the risks associated with allocation
2482 decision to all CCDRs, not just the force provider and supported CCDR. The current risk analysis
2483 process does not sufficiently capture the risk to all the various Combatant Commanders impacted
2484 by an allocation decision. Additionally, the risk analysis process must undergo improvements to
2485 better capture the opportunity costs and risks associated with the incremental nature of allocation
2486 decisions. The risk analysis must not continue to focus on the risks and costs of the one, specific
2487 allocation decision but must ensure all the previous allocation decisions linked to the current
2488 decision are included to ensure a holistic assessment of risks and costs. GFM decision makers do
2489 not have all the second and third order impacts, now and potential future impacts, of their decisions
2490 without his holistic picture of risk. Broadening the focus will allow the risk analysis process to
2491 provide all the risks associated with an allocation decision thereby providing the GFM decision
2492 makers with all the information they need to make a fully informed decision. (Gap CG-6)
- 2493 • **Develop a mechanism to link allocation to the budgeting process reducing the lag between**
2494 **operational requirements/tasking and budget decisions.** This process could include, but not be
2495 limited to, a reevaluation of the synchronization between the PPBE cycle and the rotational
2496 allocation decision cycles. These two timelines are currently uncoordinated, rotational allocation
2497 decisions occurring after PPBE/budgeting decisions, and cause the Services to inaccurately estimate
2498 their budgetary needs during the PPBE decision cycle. The GFM stakeholders need to work with
2499 the PPBE decision agents to better synchronize the timelines so rotational allocation decisions can
2500 factored into the budgetary estimates as part of the PPBE cycle. Additionally, allocation decisions
2501 requiring Services to fund unscheduled deployments in large numbers due to emergent requests for
2502 forces need to be resourced with additional funding. (Gap CG-8)
- 2503 • **Study and propose detailed requirements of contingency sourcing analysis in determining**
2504 **CCIRs of risk.** The GFM enterprise must develop a common understanding of the current
2505 capabilities and limitations of the contingency sourcing process. Each GFM stakeholder currently
2506 has a different perspective on the expected results of a contingency sourcing exercise. The
2507 development of a common understanding should begin with a set of business rules agreed to by all
2508 GFM stakeholders that define the limitations, assumptions, and clearly defined outputs bounding a
2509 contingency sourcing exercise. This will ensure all GFM stakeholders understand exactly the
2510 results, and the context those results were generated within, from a contingency sourcing exercise.
2511 The establishment of the universally accepted business rules is only an interim step as the results
2512 from a contingency sourcing exercise using the data available today will not satisfy all GFM
2513 stakeholders. Access to future force readiness data and FTN depth of detail will also be required to
2514 fully satisfy the contingency sourcing expectations of all GFM stakeholders. The issues of data and
2515 data access are core to solutions to contingency sourcing. (Gaps CG-5, CG-7, and CG-12)

UNCLASSIFIED

UNCLASSIFIED

- **Institute changes to reduce the lag between DOD guidance and the force pool structure/alignment.** The rotational allocation decision cycle must be synchronized with the analysis and prediction of force structure shortfalls. Additionally, emergent allocation decisions must be able to affect the analysis of future force structure shortfalls more frequently than on the current yearly basis. The GFM stakeholders need to work with the *GDF* development leads to institute a mechanism to ensure action is taken to react to potential future force structure shortfalls. (Gap CG-9)
- **Increase capacity of the GFM sourcing community.** The current capacity of the GFM sourcing community does not allow for the number of requested contingency and execution sourcing exercises. The sub-optimal capacity is due to insufficient manning as well as limited supporting tools. Improvements in manning will most likely need to occur in two phases. The first phase is a potential increase in manning but, this will only be a temporary fix. The long-term correction, and second phase, will be the institution of a GFM training program to create a common understanding of GFM capabilities and generate personnel trained to operate within the standardized GFM environment and trained to use the evolving tools effectively and efficiently. Improvements to the GFM tools supporting sourcing exercises must create an environment of better data standards and interoperability, improved visibility of the force structure and alignment, and increased responsiveness of the system improvement cycle time. (Gaps CG-3, CG-4, CG-5, CG-7, and CG-10)
- **Improve the capability for CCDRs to rapidly generate preferred forces.** CCDRs do not have an accurate ability to determine the availability of forces when choosing forces. This limits the CCDRs' ability to generate preferred forces. A capability to provide better visibility into force availability information is necessary and its implementation should be part of any improvement or evolution to the GFM enterprise tools. The improved preferred force generation capability must also empower planners with force availability data in order to support force planning across APEX. Improving the CCDR's ability to generate accurate preferred forces will eventually reduce the need for timely contingency sourcing exercises. It will also enable CCDRs to evaluate the feasibility of resourcing their plans with forces early in the planning cycle and close the gap to achieving "living plans" (Gaps CG-1, CG-7 and CG-11)

Section 4 – Supporting Technology

- **Continue and accelerate the GFM-DI initiative to provide a globally visible view of the force structure and its alignment.** Services need to receive the tasking to maintain both the force structure data and the alignment (assignment allocation and apportionment of the entire force structure). The tool must be capable of displaying the deployment/employment schedule of each echelon of the force structure over time in Gaant chart type display software and interfaces will incorporate usability and error-resistance for operational ease and reliability. The schedule must show training periods, JRSOI, transit, redeployment, deployment, reset, etc. Force structure visibility must be fully implemented to the individual level and show each deployable unit for each service. Recommend pursuing the OUID construct as this shows more promise and is more flexible than the legacy UTC and UIC. The tool should incorporate commercially available technology that allows scheduling excursions to "wargame" proposed changes in policy (such as BOG:Dwell ratios) in order to determine the impacts to force availability. This tool should also be able to display how sub-units and individuals are combined to deploy ad-hoc and ILO units. The sub-units and individuals assigned to ad-hoc units should be capable of being created and tracked as a temporary units and displayed through their creation, mobilization, training, deployment, JRSOI,

UNCLASSIFIED

UNCLASSIFIED

2561 redeployment demobilization. This data must be visible and accessible to the entire JPEC as GFM
2562 stakeholders need this data to improve their part (compliant with DOD Directives (DODD)
2563 8320.02, 8320.02-G, and 8500.01E). Making data accessible, via GIG connectivity, will not impede
2564 the Services' core Title 10 responsibilities; it will allow the other stakeholders to better plan and
2565 manage the global force structure. Additionally, the increased accuracy and visibility of the data
2566 will help the Services manage the training of ad-hoc and ILO forces while also increasing their
2567 ability to respond to changing CCDR force requirements. **(Gaps CG-4, CG-5, CG-6, and CG-7)**

- 2568 • **Provide global visibility of Joint and Service force data (e.g. readiness, force structure, force**
2569 **alignment, and data context) by establishing and enforcing data, interface, and collaboration**
2570 **standards.** All stakeholders within the GFM enterprise require better access to force pool data.
2571 This global visibility data is the link between force planning, accuracy of preferred force
2572 generation, contingency sourcing, and execution sourcing. The only way to bring the type and
2573 accuracy of information produced and exchanged by these activities closer together is through
2574 global visibility data with increased standardization and fidelity. Bringing the activities closer
2575 together provides the mechanism to assess risk more accurately and could possible alleviate the
2576 stress on the Joint Force Provider and Force Providers. Planners will also have the ability to
2577 validate the forces assumed available (apportioned) for planning. This capability can further enable
2578 planners to apply reasonable assumptions to generate more accurate preferred forces. The capability
2579 for CCDRs to rapidly generate preferred forces through the identification and reuse of authoritative
2580 data sources (ADS) within the allocation process will serve as the basis for functional design of this
2581 capability. Creating a common view of the force structure and its alignment is the enabling
2582 capability for further development to allow CCDRs the ability to rapidly generate preferred forces.
2583 **(Gaps CG-3, CG-5, CG-6, CG-7, and CG-10)**

- 2584 • **Implement a GFM enterprise system development process with the responsiveness to match**
2585 **the improvements needs of the warfighter.** Current GFM enterprise system development
2586 processes do not provide the responsiveness necessary to produce systems relevant to the
2587 operational needs of the warfighter. The development of all current, and future, GFM supporting
2588 tools and systems should take place within a process of greatly increased flexibility and
2589 responsiveness. A potential approach for consideration is the IT Box approach currently under
2590 review within the DOD. The creation of this improved system development process should include
2591 all GFM stakeholders and the system developer community (e.g., DISA, SPAWAR Atlantic) as
2592 active participants in the creation process. The development process should include system
2593 deployment aspects, such as the transition of GFM system functionality to enterprise-wide DISA
2594 Enterprise Computing Clusters (DECC). In order to keep any technology tool relevant, it must be
2595 responsive to rapid changes in APEX and GFM as well as specific guidance from senior leadership.
2596 The close collaboration between the operators and the developers was the basis for much of the
2597 success of the FMIP. This model of collaboration between users and developer needs to be
2598 continued. The pace of evolution of processes and procedures needs to remain closely tied with the
2599 fielding of the enabling tools. When the pace of these three is not synchronized, the lack of
2600 operational trust throughout the community grows, impeding collaboration and leads to a multitude
2601 of ad-hoc solutions. **(Gaps CG-4, CG-5, CG-8, CG-9, and CG-11)**

UNCLASSIFIED

UNCLASSIFIED

2602 Appendix K – Glossary

2603 **Accessibility** – The ability of all involved commands at every level (strategic, operational and tactical), at
2604 any time and from anywhere, to pull, push, or view relevant, shared data and information to facilitate
2605 interoperability and collaboration. Accessibility to a standardized, networked, Joint, deployable GFM tool
2606 enhances robust, visible, shared decision-making. (GFM CBA, modified from *C2 JIC*)

2607 **Activity Model** – A diagram that shows all the steps of an activity. Activity models can be made up of
2608 tasks, relationships, processes and decision nodes arranged chronologically. They are detailed flow charts
2609 that facilitate performance analysis. (*C2 CBA*)

2610 **Accuracy** – Conforming precisely to fact or truth. A system with this attribute provides error free (or
2611 within a range of acceptable error) measurements or data via credible, dependable and reliable sources.
2612 Accuracy and trust may exist due to prior performance and/or specific integrity assurance measures that
2613 have been adopted. (*C2 JIC*)

2614 **Ad-Hoc.** An ad-hoc capability is the consolidation of individuals and equipment from various
2615 commands/services and forming into a deployable/employable entity, properly manned, trained, and
2616 equipped to meet the supported CCDR's requirements. (*FY11 JFP PLANORD*)

2617 **Adaptive** – Capable of operating in a variety of unexpected situations or conditions. Adaptive systems
2618 differ from flexible systems in that adaptive systems can operate even when unexpected events occur.
2619 From an organizational standpoint, this attribute enables a timely, effective response to an altered and
2620 unforeseen operating environment. Such operating environment changes, often caused by adversary
2621 actions, may require modification of organizational structures, workflow and decision-making processes.
2622 (*C2 JIC*)

2623 **Adaptive Planning (AP)** – The joint capability to create and revise plans rapidly and systematically, as
2624 circumstances require. Adaptive Planning occurs in a networked, collaborative environment, requires the
2625 regular involvement of senior leaders, and results in plans containing a range of viable options. The DOD
2626 initiative to change the overarching process, transforming the way we plan and execute joint operations.
2627 (*CJCSI 3110.01G*)

2628 **Adaptive Planning and Execution (APEX)** – Department level system of Joint policies, process,
2629 procedures and reporting structures, supported by communications and information technology that is
2630 used by the joint planning and execution community (JPEC) to monitor, plan, and execute mobilization,
2631 deployment, employment, sustainment, redeployment and demobilization activities associated with Joint
2632 operations consistent with the AP vision. These department level policies and procedures will be
2633 documents in CJCSMs and will constitute the successor to the Joint Operation planning and Execution
2634 CJCSMs currently in effect. (*AP Roadmap II*)

2635 **Agility** – The ability to respond effectively and in a timely and innovative manner to changing
2636 circumstances in order to get the right force to the right place at the right time. To be agile, the force
2637 requirement needs to be able to be defined quickly, and the decisions need to be timely and the force
2638 identification and deployment preparation process needs to be innovative and flexible in order to field a
2639 suitable and appropriate force. The entire process needs to be seamless and responsive to changing
2640 circumstances, capable of rapid transition to execution. (GFM CBA, modified from *C2 JIC*)

2641 **Alignment** – “Alignment” in the context of this document includes scheduling force movements,
2642 deployments, redeployments, training cycles, and reset in accordance with current policies (such as dwell)
2643 across the assignment, allocation and apportionment processes.

2644 **Allocation** – Pursuant to Title 10, USC, section 162, “[a] force assigned to a [CCDR] ...may be
2645 transferred from the command to which it is assigned only by authority of the SecDef; and under

UNCLASSIFIED

UNCLASSIFIED

2646 procedures prescribed by the SecDef and approved by the President.” Under this authority, the SecDef
2647 allocates forces between CCDRs.

2648 **Apportionment** – Pursuant to Title 10, USC, section 153, “the [Chairman of the Joint Chiefs of Staff
2649 (CJCS)] shall be responsible for preparing strategic plans, including plans which conform to resource
2650 levels projected by the SecDef to be available for the period of time for which the plans are to be
2651 effective.” Pursuant to the Joint Strategic Capabilities Plan (JSCP), “apportioned forces are types of
2652 forces provided to Combatant Commanders (CCDRs) as a starting point for planning purposes only.
2653 Forces apportioned for planning purposes may not be those allocated for execution.” The CJCS’s
2654 apportionment of forces to CCDRs, outlined in the apportionment tables of the *Global Force*
2655 *Management Implementation Guidance (GFMIG)*, is based on priorities specified in the Secretary’s
2656 Guidance for Employment of the Force (*GEF*).

2657 **Area of Responsibility (AOR)** – The geographical area associated with a combatant command within
2658 which a combatant commander has authority to plan and conduct operations. (*JP 1-02*)

2659 **Assignment** – Title 10 USC Sections 161, 162, and 167 outline force assignment guidance and
2660 requirements. The President, through the *Unified Command Plan 2008* (UCP), instructs the Secretary to
2661 document his direction for assigning forces in the “Forces For Unified Commands.” Pursuant to Title 10,
2662 USC, section 162, the Secretaries of the Military Departments shall assign forces under their jurisdiction
2663 to unified and specified combatant commands to perform missions assigned to those commands. Such
2664 assignments shall be made as directed by the Secretary of Defense, including direction as to the command
2665 to which forces are to be assigned.

2666 **Attribute** – A quantitative or qualitative characteristic of an element or its actions. (*CJCSI 3170.01G*)

2667 **Capability** – The ability to achieve a desired effect under specified standards and conditions through
2668 combinations of means and ways across the doctrine, organization, training, materiel, leadership and
2669 education, personnel, and facilities (DOTMLPF) to perform a set of tasks to execute a specified course of
2670 action. It is defined by an operational user and expressed in broad operational terms in the format of an
2671 initial capabilities document or a joint DOTMLPF change recommendation. In the case of materiel
2672 proposals/documents, the definition will progressively evolve to DOTMLPF performance attributes
2673 identified in the capability development document and the capability production document. (*CJCSI*
2674 *3170.01G*)

2675 **Capabilities-Based Assessment (CBA)** – The CBA is the Joint Capabilities Integration and
2676 Development System (JCIDS) analysis process. It answers several key questions for the validation
2677 authority prior to their approval: define the mission; identify capabilities required; determine the
2678 attributes/standards of the capabilities; identify gaps; assess operational risk associated with the gaps;
2679 prioritize the gaps; identify and assess potential non-materiel solutions; provide recommendations for
2680 addressing the gaps. (*CJCSI 3170.01G*)

2681 **Capstone Concept for Joint Operations (CCJO)** – The *Capstone Concept for Joint Operations*
2682 describes in broad terms my vision for how the joint force circa 2016-2028 will operate in response to a
2683 wide variety of security challenges. It proposes that future joint force commanders will combine and
2684 subsequently adapt some combination of four basic categories of military activity -- combat, security,
2685 engagement, and relief and reconstruction -- in accordance with the unique requirements of each
2686 operational situation. The concept is informed by current strategic guidance, but because it looks to the
2687 future, it is intended to be adaptable, as it must be, to changes in that guidance. (*CCJO, Version 3.0*)

2688 **Command and Control (C2)** – The exercise of authority and direction by a properly designated
2689 commander over assigned and attached forces in the accomplishment of the mission. Command and
2690 control functions are performed through an arrangement of personnel, equipment, communications,

UNCLASSIFIED

UNCLASSIFIED

2691 facilities, and procedures employed by a commander in planning, directing, coordinating, and controlling
2692 forces and operations in the accomplishment of the mission. *(JP 1-02)*

2693 **Communities of Interest (COI)** – Collaborative groups of users who must exchange information in
2694 pursuit of their shared goals, interests, missions, or business processes and who therefore must have a
2695 shared vocabulary for the information they exchange. *(JP 1-02)*

2696 **Completeness** – Having all components, parts or steps critical to complete an operation. Complete
2697 information enables timely, appropriate decision-making. *(C2 JIC)*

2698 **Concept of Operations (CONOPS)** – A verbal or graphic statement that clearly and concisely expresses
2699 what the joint force commander intends to accomplish and how it will be done using available resources.
2700 The concept is designed to give an overall picture of the operation. *(JP 1-02)*

2701 **Condition** – A variable of the environment that affects performance of a task. *(CJCSI 3010.02B)*

2702 **Contingency Planning** – The Joint Operation Planning and Execution System planning activities that
2703 occur in noncrisis situations. The Joint Planning and Execution Community uses contingency planning to
2704 develop operation plans for a broad range of contingencies based on requirements identified in the
2705 Contingency Planning Guidance, Joint Strategic Capabilities Plan, or other planning directive.
2706 Contingency planning underpins and facilitates the transition to crisis action planning. *(JP 5-0)*

2707 **Contingency Sourced Forces** – Contingency sourced forces are specific forces identified by JFPs,
2708 assisted by their Service components and the parent Services, that meet the planning requirement at a
2709 specified point in time. The Joint Staff provides specific guidance through a list of sourcing assumptions
2710 and planning factors contained in the contingency sourcing message. The JFPs have final approval of the
2711 total sourcing solution and provide the approved solution back to the supported CCDR in the CCDR
2712 requested format. The Joint Staff provides specific guidance for the selection of forces in a contingency
2713 sourcing message. *(GFMIG)*

2714 **Course of Action (COA)** – (1) Any sequence of activities that an individual or unit may follow. (2) A
2715 possible plan open to an individual or commander that would accomplish, or is related to the
2716 accomplishment of, the mission. (3) The scheme adopted to accomplish a job or mission. (4) A line of
2717 conduct in an engagement. (5) A product of the Joint Operation Planning and Execution System (JOPES)
2718 concept development phase. *(JP 1-02)*

2719 **Crisis Action Planning** – One of the two types of joint operation planning. The Joint Operation Planning
2720 and Execution System process involving the time-sensitive development of joint operation plans and
2721 operation orders for the deployment, employment, and sustainment of assigned and allocated forces and
2722 resources in response to an imminent crisis. Crisis action planning is based on the actual circumstances
2723 that exist at the time planning occurs. *(JP 1-02)*

2724 **Critical Task** – A task of such importance the slightest error will have consequences that could result in
2725 the failure of an operation.

2726 **Decentralized Execution** – Delegation of execution authority to subordinate commanders. *(JP 3-30)*

2727 **Deployment** – (4) The relocation of forces and materiel to desired operational areas. Deployment
2728 encompasses all activities from origin or home station through destination, specifically including intra-
2729 continental United States, inter-theater, and intra-theater movement legs, staging, and holding areas. *(JP*
2730 *1-02)*

2731 **Distribution** – (4) An official delivery of anything, such as orders or supplies. (5) The operational
2732 process of synchronizing all elements of the logistic system to deliver the “right things” to the “right
2733 place” at the “right time” to support the geographic combatant commander. (6) The process of assigning
2734 military personnel to activities, units, or billets. *(JP 4-0)*

UNCLASSIFIED

UNCLASSIFIED

- 2735 **Dwell** – The time between deployments.
- 2736 **Effect** – The physical, functional, or psychological outcome, event, or consequence that results from
2737 specific military or non-military actions. (USJFCOM)
- 2738 **Employment** – The strategic, operational, or tactical use of forces. (*JP 1-02*)
- 2739 **Execution** – The initiation of an operation; a military response with operations being conducted. (*C2 JIC*)
- 2740 **Force Planning** – 1. Planning associated with the creation and maintenance of military capabilities. It is
2741 primarily the responsibility of the Military Departments, Services, and US Special Operations Command
2742 and is conducted under the administrative control that runs from the Secretary of Defense to the Military
2743 Departments and Services. 2. In the Joint Operation Planning and Execution System, the planning
2744 conducted by the supported combatant command and its components to determine required force
2745 capabilities to accomplish an assigned mission, as well as by the Military Departments, Services, and
2746 Service component commands of the combatant commands, to develop forces lists, source and tailor
2747 required force capabilities with actual units, identify and resolve shortfalls, and determine the routing and
2748 time-phasing of forces into the operational area. (*JP 1-02*)
- 2749 **Force Management** – The process involving activities encompassing prioritization of requirements
2750 against available capabilities, which would include non-unit capabilities and/or skills such as language,
2751 regional, and cultural proficiency assets. (*GFMIG*)
- 2752 **Force Sourcing** – This covers a range of sourcing methodologies providing CCDRs with requested
2753 capabilities. The intent is to provide the CCDR with the most capable forces based on stated capability
2754 requirements, balanced against risks (operational, future challenges, force management, institutional) and
2755 global priorities. Within the range of multiple sourcing methodologies, execution and contingency are
2756 most prevalent because the force sourcing process generally results in an end state in which JFPs identify
2757 units (UIC) to satisfy a capability (UTC) requirement for execution or planning. (*GFMIG*)
- 2758 **Force Tracking Number (FTN)** – An 11-character alphanumeric reference number assigned by a
2759 Supported Combatant Commander to its requested force capability requirements. FTNs are used to
2760 uniquely identify, organize, and manage force capability requirements requested in the Global Force
2761 Management (GFM) Force Allocation process and support execution of Joint Force Provider
2762 responsibilities. When the FTN is associated with the force capability requirement in record message
2763 traffic, JOPES application, deployment, force tracking, scheduling, and mobilization systems, it creates a
2764 simple means to link all information and data for the same FTN. Also called FTN. (*GFMIG*)
- 2765 **Foresight** – (1) The ability to recognize, understand and anticipate capabilities and forces in the force
2766 pool as well as recognize warfighter needs in time to identify create or adapt relevant, appropriate forces
2767 to meet those needs. (2) The ability to provide adequate, reliable notification to enable the force to
2768 properly prepare for the mission. (3) The ability to quickly anticipate and predict the risks and opportunity
2769 costs of (2nd and 3rd order effects) of proposed changes to the force pool in assignment, apportionment or
2770 allocation. (GFM CBA, modified from *C2 JIC*)
- 2771 **Global Force Management (GFM)** – A process to align force apportionment, assignment, and allocation
2772 methodologies in support of the National Defense Strategy and joint force availability requirements;
2773 present comprehensive visibility of the global availability and operational readiness (to include language,
2774 regional, and cultural proficiency of U.S. conventional military forces; globally source joint force
2775 requirements; and provide senior decision makers a vehicle to quickly and accurately assess the impact
2776 and risk of proposed allocation, assignment and apportionment changes. (*GFMIG*)
- 2777 **Global Force Management (GFM) Enterprise** – The GFM enterprise is a conceptual term to explain
2778 the GFM processes used to align (assign, allocate and apportion) the force structure. The enterprise view
2779 encompasses the interaction of the stakeholders Office of the Secretary of Defense, and the Joint Staff, the

UNCLASSIFIED

UNCLASSIFIED

2780 Services, to include the Service Components, the Joint Force Providers and Joint Force Manager, to
2781 include their assigned service components and subordinate commands, the Combatant Commanders, to
2782 include their assigned Service Components, Joint Task Forces. The GFM enterprise also includes the
2783 interaction of GFM with mutually supporting, interrelated processes including Planning, Command and
2784 Control, Deployment, Distribution, Inter-Agency, Current Operations, and Readiness. Annex A Section 1
2785 provides a more detailed description of how these processes interact.

2786 **Global Information Grid (GIG)** – The globally interconnected, end-to-end set of information
2787 capabilities for collecting, processing, storing, disseminating, and managing information on demand to
2788 warfighters, policy makers, and support personnel. The GIG includes owned and leased communications
2789 and computing systems and services, software (including applications), data, security services, other
2790 associated services, and National Security Systems. Non-GIG IT includes stand-alone, self-contained, or
2791 embedded IT that is not, and will not be, connected to the enterprise network. (*DODD 8000.01*)

2792 **Homeland Defense (HD)** – The protection of United States sovereignty, territory, domestic population,
2793 and critical defense infrastructure against external threats and aggression or other threats as directed by
2794 the President. (*JP 1-02*)

2795 **Homeland Security (HS)** – A concerted national effort to prevent terrorist attacks within the United
2796 States; reduce America's vulnerability to terrorism, major disasters, and other emergencies; and minimize
2797 the damage and recover from attacks, major disasters, and other emergencies that occur. (*JP 1-02*)

2798 **In-Lieu-Of (ILO)** an ILO force/capability is a standard force, including associated table of organization
2799 and equipment, that is deployed/employed to execute missions and tasks outside its core competencies.
2800 (*FY11 JFP PLANORD*)

2801 **Information** – (1) Facts, data, or instructions in any medium or form. (2) The meaning that a human
2802 assigns to data by means of the known conventions used and their representation. (*JP 1-02*)

2803 **Information Superiority** – The operational advantage derived from the ability to collect, process, and
2804 disseminate an uninterrupted flow of information while exploiting or denying an adversary's ability to do
2805 the same. (*JP 1-02*)

2806 **Innovation** – Performing tasks in new ways or by using new, advanced or original ideas, solutions or
2807 concepts. This attribute is characterized by a proactive approach. This attribute is often found in
2808 organizations that (1) offer abundant freedom to exchange information to gain full understanding of
2809 commander's intent, and (2) are empowered to take action. Solutions featuring this attribute may alter or
2810 even eliminate current procedures. (*C2 JIC*)

2811 **Integration** – The arrangement of military forces and their actions to create a force that operates by
2812 engaging as a whole. (*JP 1-02*)

2813 **Intelligence, Surveillance, and Reconnaissance** – An activity that synchronizes and integrates the
2814 planning and operation of sensors, assets, and processing, exploitation, and dissemination systems in
2815 direct support of current and future operations. This is an integrated intelligence and operations function.
2816 Also called ISR. (*JP 1-02*)

2817 **Interoperability** – (1) The ability to operate in synergy in the execution of assigned tasks. (2) The
2818 condition achieved among communications-electronics systems or items of communications-electronics
2819 equipment when information or services can be exchanged directly and satisfactorily between them
2820 and/or their users. The degree of interoperability should be defined when referring to specific cases. (*JP*
2821 *1-02*)

UNCLASSIFIED

UNCLASSIFIED

2822 **Joint Force Commander (JFC)** – A general term applied to a combatant commander, subunified
2823 commander, or joint task force commander authorized to exercise combatant command (command
2824 authority) or operational control over a joint force. (*JP1-02*)

2825 **Joint Force Provider (JFP)** – The organization responsible for recommending to the Joint Chiefs trained
2826 and ready capabilities and forces for allocation by the SecDef to support combatant command
2827 requirements. The JFP will be assigned by the Joint Staff to develop and submit a sourcing
2828 recommendation in response to a validated capability or force requirement. The JFP responsibilities
2829 should be considered overall management of conventional, SOF or mobility forces but may or may not
2830 include being the force provider for a particular requirement. The actual Force Provider is the CCDR or
2831 assigned to provide forces by the Secretary of Defense via a CJCS deployment order. They execute the
2832 following tasks: a. In coordination with other CCDRs and Services, develop recommended global joint
2833 sourcing solutions, independent of forces assignment, in response to combatant commander requirements
2834 forwarded by the Chairman of the Joint Chiefs of Staff. Those sourcing solutions are provided as a
2835 recommendation to the Joint Chiefs, for ultimate SecDef approval and include: (1) Unit(s) identified for
2836 sourcing the request (2) Capability substitution options (3) Mobilization requirements (4) A report of
2837 applicable risk associated with recommended sourcing options b. Coordinate and recommend to the Joint
2838 Chiefs actions required to sustain an acceptable level of capabilities or forces needed to respond to
2839 validated combatant command requirements. (*GFMIG*)

2840 **Joint Functional Concept (JFC)** – A description of how the future Joint force will perform a particular
2841 military function across the full range of military operations 10-20 years in the future. These concepts
2842 support the Capstone Concept for Joint Operations (CCJO) and Joint Operating Concepts (JOCs) and
2843 draw operational context from them. They identify required capabilities and attributes, inform JOCs, and
2844 provide functional context for Joint Integrating Concept (JIC) development and joint experimentation.
2845 (*CJCSI 3010.02B*)

2846 **Joint Functional Manager (JFM)** – The organization responsible for planning, integrating, and
2847 coordinating specifically designated forces or capabilities for sourcing, ICW the responsible JFP. A JFM
2848 performs those actions required to staff and develop synchronized sourcing recommendations for CCDR
2849 requirements ICW the Services, CCDRs and other agencies, and assists the JFP in providing its sourcing
2850 recommendation to the Joint Chiefs for those specified capabilities and forces for allocation by the
2851 Secretary of Defense to support combatant command requirements. (*GFMIG*)

2852 **Joint Integrating Concept (JIC)** – A description of how a JFC 10-20 years in the future will integrate
2853 capabilities to generate effects and achieve an objective. A JIC includes an illustrative CONOPS for a
2854 specific scenario and a set of distinguishing principles applicable to a range of scenarios. JICs have the
2855 narrowest focus of all concepts and distill JOC and Joint Functional Concept-derived capabilities into the
2856 fundamental tasks, conditions and standards required to conduct Capabilities-Based Assessment (CBA).
2857 (*CJCSI 3010.02B*)

2858 **Joint Operating Concept (JOC)** – An operational-level description of how a future Joint Force
2859 Commander (10-20 years in the future) will accomplish a strategic objective through the conduct of
2860 operations within a military campaign. This campaign links end-state, objectives, and desired effects
2861 necessary for success. The concept identifies broad principles and essential capabilities and provides
2862 operational context for Joint Functional Concept and JIC development and experimentation. (*CJCSI*
2863 *3010.02B*)

2864 **Joint Operations Planning** – Planning activities associated with joint military operations by combatant
2865 commanders and their subordinate Joint Force commanders in response to contingencies and crises. Joint
2866 operation planning includes planning for the mobilization, deployment, employment, sustainment,

UNCLASSIFIED

UNCLASSIFIED

2867 **Knowledge Management (KM)** – The process of discovering, selecting, organizing, distilling, sharing,
2868 developing and using information in a social-domain context to improve warfighter effectiveness.
2869 (*C2JIC*)

2870 **Logistics** – Planning and executing the movement and support of forces. It includes those aspects of
2871 military operations that deal with: a. design and development, acquisition, storage, movement,
2872 distribution, maintenance, evacuation, and disposition of materiel; b. movement, evacuation, and
2873 hospitalization of personnel; c. acquisition or construction, maintenance, operation, and disposition of
2874 facilities; and d. acquisition or furnishing of services. (*JP 1-02*)

2875 **Major Combat Operation (MCO)** – Large-scale operations conducted against a nation state(s) that
2876 possesses significant regional military capability, with global reach in selected capabilities, and the will to
2877 employ that capability in opposition to or in a manner threatening to US national security. (*C2 JIC*)

2878 **Mission Partners** – Those entities not under the commander’s direct authority that are participating in the
2879 mission. Some examples include, but are not limited to, supported/supporting commands, non-DOD
2880 agencies such as State or CIA, coalition partners, host nation civil authorities, international organizations,
2881 and nongovernmental organization (NGOs). (*C2 JIC*)

2882 **Multinational** – Between two or more forces or agencies of two or more nations or coalition partners. (*JP*
2883 *1-02*)

2884 **Near-Real-Time (NRT)** – Data older than near real time that may impact the planning cycle; tracks
2885 should not be considered actual locations but last reported and “in the general vicinity.” The reason for
2886 delay may be technical or procedural. In general, non-real-time data may be considered “static” data.
2887 (CJCSI 3151.01B)

2888 **Operational Trust** – The aggregate level of trust from each person and earned from each entity (person,
2889 object, system) to accomplish a mission or endeavor. Complex operations using interdependent forces
2890 require a level of operational trust in order to gain operational efficiency and effectiveness. Operational
2891 trust refers to the sum of a variety of trust perspectives including (but not limited to)
2892 commander/subordinate, subordinate/commander, peer/peer, operator/equipment and warfighter/tactics.
2893 (*C2 JIC*)

2894 **Preferred Forces** – Preferred forces are forces that are identified by the supported CCDR in order to
2895 continue employment, sustainment, and transportation planning and assess risk. These forces are planning
2896 assumptions only, are not considered "sourced" units, and do not indicate that these forces will be
2897 contingency or execution sourced. (*GFMIG*)

2898 **Quality** – The totality of characteristics including an accurate, complete, relevant descriptions of the force
2899 requirement, clear concise and accurate orders, shared, relevant data available in the correct context
2900 facilitating decision making and action. Quality in this context also refers to accurate, complete, and
2901 relevant consistent force visibility supporting more informed assignment, apportionment, and allocation
2902 decisions. (GFM CBA)

2903 **Reachback** –The process of obtaining products, services, and applications, or forces, or equipment, or
2904 materiel from organizations that are not forward deployed. (*JP 1-02*)

2905 **Real Time (RT)** – Pertaining to the timeliness of data or information which has been delayed by the time
2906 required for electronic communication and automatic data processing. This implies that there are no
2907 significant delays. (*JP 1-02*)

2908 **Reclama -** – referenced in paragraph 8 of DJ3 message DTG: 021920ZJUL2007 Subject: JOINT STAFF
2909 FORCE SOURCING BUSINESS RULES AND SDOB PROCESS

UNCLASSIFIED

UNCLASSIFIED

2910 **Redeployment** – The transfer of forces and materiel to support another joint force commander's
2911 operational requirements, or to return personnel, equipment, and materiel to the home and/or
2912 demobilization stations for reintegration and/or out-processing. (*JP 1-02*)

2913 **Reset** – Reset is a critically important activity to restore a unit to a desired level of combat capability
2914 commensurate with its future mission. Reset encompasses maintenance and supply actions that restore
2915 and enhance combat capability for both unit and repositioned equipment that has been destroyed,
2916 damaged, stressed, or worn out due to operations and training. These maintenance and supply actions
2917 involve depot and field level work, and since the focus is future mission requirements it can include:
2918 enhancing existing equipment through the insertion of new technologies, restoring selected equipment to
2919 near zero-miles/zero-hours condition, and/or procuring replacement systems. (*JP 4-0*)

2920 **Security** – 1. Measures taken by a military unit, activity, or installation to protect itself against all acts
2921 designed to, or which may, impair its effectiveness. 2. A condition that results from the establishment and
2922 maintenance of protective measures that ensure a state of inviolability from hostile acts or influences. 3.
2923 With respect to classified matter, the condition that prevents unauthorized persons from having access to
2924 official information that is safeguarded in the interests of national security. See also national security. (*JP*
2925 *1-02*)

2926 **Service Red Lines** – referenced in paragraph 9 of DJ3 message DTG: 021920ZJUL2007 Subject: JOINT
2927 STAFF FORCE SOURCING BUSINESS RULES AND SDOB PROCESS

2928 **Shared Understanding** – A shared appreciation of the situation supported by common information to
2929 enable rapid collaborative Joint engagement, maneuver, and support. (*C2 JIC*)

2930 **Simplicity** – Simplicity applies to Global Force Management across DOTMLPF, markedly focused on
2931 functionality and avoiding unnecessary complexity (both primary and secondary complications).
2932 Simplicity facilitates direct access to coherent, relevant force structure information, clarity of
2933 requirements, efficient force providing structures and common force management processes. From a
2934 materiel aspect, simplicity is the quality or state of few elements, an intuitive interface and enables easy,
2935 quick instruction. Simplicity does not mean a lack of advanced solutions or capability stagnation. (GFM
2936 CBA)

2937 **Situational Awareness** – Situational Awareness refers to the degree of accuracy by which one's
2938 perception of his current environment mirrors reality. It is the knowledge, cognition and anticipation of
2939 events, factors and variables affecting the safe, expedient and effective conduct of the mission. It is
2940 developed through the continuous integration of new observations into recurring mental assessments. (*C2*
2941 *JIC*)

2942 **Standard** – Quantitative or qualitative measures for specifying the levels of performance of a task.
2943 (*CJCSI 3010.02B*)

2944 **Synchronization** 1. The arrangement of military actions in time, space, and purpose to produce
2945 maximum relative combat power at a decisive place and time. 2. In the intelligence context, application of
2946 intelligence sources and methods in concert with the operation plan to ensure intelligence requirements
2947 are answered in time to influence the decisions they support. (*JP 1-02*)

2948 **Task** – An action or activity (derived from an analysis of the mission and concept of operations) assigned
2949 to an individual or organization to provide a capability. (*Manual for the Operation of the JCIDS*)
